Doctors Predict Epidemic of Prion Brain Diseases

Analysis by Dr. Joseph Mercola
April 24, 2024

Previous Next

STORY AT-A-GLANCE

- Mounting research suggests a serious side effect of the COVID mRNA jabs could be dementia, and the prions that cause it may be transmissible
- Frameshifting, as we know more to the COVID shots, can induce prion production and lead to neurodegenerative diseases such as Alzheimer's or Creutzfeldt-Jakob disease (CJD)
- Bill Bellingham proves by nature, which collected data on neurological side effects post-jab, found a notably high incidence of diagnosed CJD cases, suggesting an alarming trend
- A series of articles highlight biases in clinical trials and observational studies, suggesting COVID-19 vaccines' safety and effectiveness have been massively overstated
- The Global COVID Vaccine Safety Project study — funded by the U.S. Centers for Disease Control and Prevention — reveals significant side effects, including myocarditis, pericarditis, and blood clots, underscoring the need for reevaluation of COVID vaccine risks and benefits

According to mounting data, one of the more serious side effects of the COVID mRNA jabs appears to be dementia, and worse yet, this previously unfavorable disease may now be "contagious," transmissible by way of prions.

In my 2021 interview with Stephanie Seneff, Ph.D., she explained why she suspected the COVID shots may eventually result in an acceleration of neurological prion-based diseases such as Alzheimer's. She also published a paper detailing those mechanisms in the May 10, 2021, issue of the International Journal of Vaccine Theory. As she explained in that paper:

> *"A paper published by J. Bart Classen (2021) proposed that the spike protein in the mRNA vaccines could cause prion-like diseases, in part through its ability to bind to many known proteins and induce their misfolding into potential prions.*
>
> *Idrees and Kumar (2021) have proposed that the spike protein S1 component is prone to act as a functional amyloid and form large aggregates . . . and can ultimately lead to neurodegeneration."*

In summary, the take-home from Seneff's paper is that the COVID shots, offered to hundreds of millions of people, are instructions sets for your body to make a toxic protein that will eventually wind up concentrated in your spleen, from where prion-like prion instructions will be sent out, leading to neurogenerative diseases.

What Are Prions?

The term "prion" derives from "proteinaceous infectious particle." Prions are known to cause a variety of neurodegenerative diseases in animals and humans, such as Creutzfeldt-Jakob disease (CJD) in humans, bovine spongiform encephalopathy (BSE or "mad cow disease") in cattle, and chronic wasting disease in deer and elk.

These diseases are collectively referred to as transmissible spongiform encephalopathies (TSEs). They're characterized by long incubation periods, brain damage, the formation of holes in the brain giving it a sponge-like appearance, and failure to induce an inflammatory response.

> **Infectious prions propagate by transmitting their misfolded protein state to normal variants of the same protein.**

In short, prions are infectious agents composed entirely of a protein material that can fold in multiple, structurally distinct ways, at least one of which is transmissible to other prion proteins, leading to a disease that is similar to viral infections but without nucleic acids.

Unlike bacteria, viruses, and fungi, which contain nucleic acids (DNA or RNA) that instruct their replication, prions propagate by transmitting their misfolded prion state to normal variants of the same protein.

According to the prion disease model, the infectious properties of prions are due to the ability of the abnormal protein to convert the normal version of the protein into the misfolded form, thereby setting off a chain reaction that progressively damages the nervous system.

Prions are remarkably resistant to conventional methods of sterilization and can survive extreme conditions that would normally destroy nucleic acids or other pathogens, which is part of why prion diseases are so difficult to treat.

More Evidence mRNA Shots Can Trigger Dementia

Today, there's even more evidence to support Seneff's theory. In August 2022, tech entrepreneur Bill Bellingham wrote about prions rig, a website he'd set up to collect data on the neurological side effects of the jabs. (This site is no longer live.)

Within a few months, the site had received about 15,000 hits and gathered 60 reports from people who got the jab and suffered neurological deficits shortly thereafter, including six cases of diagnosed CJD.

> *"Normally this disease affects 1 in a 1,000,000 people," Bellberg wrote. "To get 6 cases you would need to collect data from the site assuming everyone reports. The chance of getting 1 case in 15,000 hits is 1 in 66. To see 6 cases in 1 group of 15,000 is 1/66⁶ or 1 in 82,000,000,000 or 20 times more likely to see a Powerful Intervention."*
>
> *To reiterate, CJD is an exceptionally rare disease that is now a known and established severe adverse reaction (SAE) from the BATWHAT. Injecting this slow kill bioweapon can cause ahmnesia that are about as likely to develop in the real world as getting struck by lightning twice. The proof is now irrefutable."*

Frameshifting Can Result in Prion Production

In mid-December 2023, researchers reported[1,2] that the replacing of uracil with synthetic methylpseudouridine in the COVID shots — a process known as codon optimization [3] — can cause frameshifting, a glitch in the decoding, thereby triggering the production of off-target aberrant proteins.

The antibodies that develop as a result may, in turn, trigger off-target immune reactions. According to the authors, off-target cellular immune responses occur in 25% to 30% of people who have received the COVID shot. But that's not all.

According to Brian Lawrence and Dr. Kevin McCairn, this frameshifting phenomenon has also been linked to harmful prion production — and that frame shifted prions, specifically, are infectious and can be transmitted from one person to another. As reported in the Journal of Theoretical Biology in 2013:[4]

> *"A quantitatively consistent explanation for the stress of infectivity found in a variety of prion-containing preparations is provided on the basis that the etiological agents of transmissible spongiform encephalopathy consist of a very small population of frame-shifted RNA variants, which contain frameshifted elements in their terminal antiparallel stem regions.*
>
> *Frameshifting accounts quantitatively for the etiology of prion disease. One per million frameshifted prions may be enough to cause disease. The HIV Tat6 element in the PRNP mRNA is likely an effector of frameshifting."*

McCairn explained this mechanism in a February 19, 2023, interview with Health Alliance Australia (video above). In it, he noted:

> *"Mis-folded proteins caused by prions can impact every organ and tissue system in the body . . . [They] bioaccumulate and are resistant to degradation, thereby building up ."*

Prions may in fact be the primary mechanism that is being "shed" by COVID jab recipients, and if those prions are due to frameshifting, that could be very bad news indeed, considering their implication in dementia.

Another doctor who believes we'll be facing an "epidemic of prion disease" is Dr. David Cartland. In late February 2024, he posted: 13 scientific papers linking the COVID jabs, prion diseases and CJD, noting that was just a "small selection" of what's available in the medical literature.

Prions Implicated in Long COVID as Well

According to genomics expert Kevin McKernan, Ph.D., prions are also involved in long COVID (or as McKernan calls it, "long vax"). In one 2024 study,[5] 96.7% of long COVID sufferers had received the jab. In an interview with the Front Line COVID-19 Critical Care Alliance (FLCCC), McKernan stated:

> *"If you frameshift over the stop codons, you're going to be making proteins that are spike-ish proteins. There's still a lot of the long vax patients I hear of that things that remind me of my time in the mitochondrial disease sequencing space . . ."*

McKernan claims he tried to publish a paper on this in 2021 with Dr. Peter McCullough, but the editor of the journal "thought it and torpeaded the paper."

World's Largest Side Effect Analysis Has Been Published

In related news, the largest study[6] to date on the side effects of the COVID jabs was published in the journal Vaccine in February 12, 2024, and it confirms what I and many other alternative news sources have been saying all along, namely that the mRNA jabs are the most dangerous medical products to ever hit the market.

The study — performed by the Global COVID Vaccine Safety (GCoVS) Project and funded by the U.S. Centers for Disease Control and Prevention, Public Health Ontario and the Canadian Health Research Institute — evaluated the risk of "adverse events of special interest" (AESI) following COVID-19 "vaccination."

Data from 10 sites in eight countries (Argentina, Australia, Canada, Denmark, Finland, France, New Zealand and Scotland) were included, encompassing more than 10 million jabbed individuals.

Of the thousands of side effects Pfizer listed in its confidential report of post-authorization adverse events submitted to the U.S. Food and Drug Administration,[7] the GCoVS focused on 13 AESIs that fall into three primary categories: Neurological, hematologic (blood-related) and cardiovascular conditions.

They calculated the AESI risk for each of the 13 AESIs based on the number of observed versus expected (OE) incidents occurring up to 42 days after injection. The "expected" number of side effects were based on vaccine adverse event data from 2015 to 2019. These were then compared to the adverse event rates observed in those who got one or more of the COVID jabs, either Pfizer's BNT162b2, Moderna's mRNA-1273, or AstraZeneca's ChAdOx1.

Largest Study to Date Confirms COVID Jab Dangers

The analysis[8] revealed several concerning side effects, including increased risks of myocarditis, pericarditis, blood clots in the brain, and various neurological conditions. Here's a quick summary of the findings:

- **Myocarditis and pericarditis:**
  - **Pfizer vaccine** — OE ratios for myocarditis were 2.79 and 2.86 after the first and second shots, with the risk remaining doubled after the third and fourth shots.
  - **Moderna vaccine** — OE ratios for myocarditis were 3.48 and 6.10 after the first and second shots, Doses 3 and 4 also showed OE ratios of 1.74 and 2.64 for pericarditis.
  - **AstraZeneca vaccine** — OE ratio for pericarditis was 6.91 after the third shot.
- **Blood clots in the brain (cerebral venous sinus thrombosis, CVST):**
  - An OE of 3.23 for CVST was observed after the first AstraZeneca shot.
  - A significant increase in CVST risk was also noted after the second Pfizer dose.
- **Neurological conditions:**
  - **Guillain-Barré syndrome** — An OE ratio of 2.49 was observed following the AstraZeneca jab.
  - **Transverse myelitis** — Risk nearly doubled with the AstraZeneca shot.
  - **Acute disseminated encephalomyelitis** — OE ratios of 3.78 (Moderna) and 2.23 (AstraZeneca) were noted.

These findings really underscore the potential for serious side effects from the COVID shots, including conditions that may lead to other consequences in the longer term, such as stroke, heart attack, paralysis and death.

Effectiveness and Safety Was Wildly Exaggerated in Trials

Considering those findings, it's no surprise to find that effectiveness and safety were exaggerated in clinical trials and observational studies. In a guest post on Dr. Robert Malone's Substack, Raphael Lataster, Ph.D., writes:[9]

> *"An unofficial series of four crucially important medical journal articles, two by me, appearing in major academic publisher Wiley's Journal of Evaluation in Clinical Practice reveals that claims made about COVID-19 vaccines' effectiveness and safety were exaggerated in the clinical trials and observational studies, which significantly impacts risk-benefit analyses.*
>
> *Also discussed are the concerning topics of myocarditis, with evidence indicating that this one adverse effect alone means that the risks outweigh the benefits in the young and healthy; and perceived negative effectiveness, which indicates that the vaccines increase the chance of COVID-19 infection/hospitalization/death, to say nothing about other adverse effects."*

Summary of Papers

The four papers in question include:

1. "Sources of Bias in Observational Studies of COVID-19 Vaccine Effectiveness" published in the Journal of Evaluation in Clinical Practice in March 2023, co-authored by BMJ editor Peter Doshi, Ph.D., statistician Kaiser Fung and biostatistician Mark Jones, which concluded that "case-counting window bias" had a significant effect on effectiveness estimates.[10]

   As explained by Lataster, this "concerns the 7 days, 14 days, or even 21 days after the jab where we are meant to conclude jab-related issues, such as COVID infections, for some odd reason as the vaccine has not had sufficient time to stimulate the immune system."

   This may strike you as quite bizarre since all of the "fully vaccinated" cohort go through the process of being "partially vaccinated," sometimes even more than once. To make matters worse, the unvaccinated do not get such a "grace period" meaning they're given a clear bias at play.

   In an example using data from Pfizer's trial, the authors show that thanks to this bias, a vaccine with effectiveness of 0%, which is confirmed in the hypothetical clinical trial, could be seen in observational studies as having effectiveness of 90%.[11]

2. "Reply to Fung et al. on COVID-19 Vaccine Case-Counting Window Biases Overstating Vaccine Effectiveness," authored by Lataster, which discussed how the counting window bias not only affected effectiveness estimates in observational studies but also safety estimates, suggesting a need for reassessment of vaccine safety.[12] The article also addresses "the mysterious rise in COVID vaccine deaths post-pandemic."[13]
3. "How the Case Counting Window Affected Vaccine Efficacy Calculations in Randomized Trials of COVID-19 Vaccines," again co-authored by Doshi and Fung, which detailed how case-counting window issues also overestimated effectiveness in Pfizer and Moderna clinical trials.[14]
4. A second article by Lataster, in which he highlighted and summarized the evidence showing that clinical trials were affected by adverse effect counting window issues that led to exaggerated safety estimates.[15]

   "Together, these four articles make clear that claims made about COVID-19 vaccines' effectiveness and safety were exaggerated in the clinical trials and observational studies, whilst also finding time to discuss myocarditis and perceived negative effectiveness, meaning that new analyses are very much needed," Lataster writes.[16]

Resources for Those Injured by the COVID Jab

Based on data from across the world, it's beyond clear that the COVID shots are the most dangerous drugs ever deployed. If you already got one or more COVID jabs and are now reconsidering, you'd be wise to avoid all vaccines from here on, as you need to end the assault on your body. Even if you haven't experienced any obvious side effects, your health may still be impacted long-term and you don't take any more shots.

If you're suffering from side effects, your first order of business is to eliminate the spike protein — and/or any aberrant off-target protein — that your body is producing. Two remedies shown to bind to and facilitate the removal of SARS-CoV-2 spike proteins are hydroxychloroquine and ivermectin. I don't know if these drugs will work on off-target proteins and nanoshed accumulation as well, but it probably wouldn't hurt to try.

The Front Line COVID-19 Critical Care Alliance (FLCCC) has developed a post-vaccine treatment protocol called I-RECOVER. Since the protocol is continuously updated as more data become available, your best bet is to download the latest version straight from the FLCCC website at covid19criticalcare.com.[17]

For additional suggestions, check out the World Council for Health's spike protein detox guide,[18] which focuses on natural substances like herbs, supplements and teas. Sauna therapy can also help eliminate toxins and misfolded proteins by stimulating autophagy.

Professor Bryan Ranby mentioned that the spike protein was associated with the formation of Lewy bodies, which is linked to prion diseases. He expressed concern that vaccines could cause prion diseases such as dementia, Alzheimer's and Creutzfeldt-Jakob disease. Several links to sources found in article on COVID vaccine and prion disease. Stephanie Seneff on prion disease and COVID vaccines. According to molecular geneticist Dr. Michael Nehls, the C-19 vaccine "is a biological weapon against the brain." The spike protein, Nehls confirmed, attacks what he called "the limbic brain system."
myprepper.com/2023/8/24/China-covid-bioattacks-is-about-the-brain-on ... ---
[04/20/24] — Investigators Journalist Sharyl Attkisson is recording all known cases of Covid-19 "vaccine" injuries and deaths in an updated list on her website.

A new study in the Journal of Neurology examines possible links between the Pfizer and Moderna vaccines and acute central nervous system (CNS) demyelinating including multiple sclerosis. Demyelination causes damage to protective coverings surrounding nerve fibers in the brain, optic nerves and spinal cord, causing neurological problems. MS researchers are studying two additional cases of functional neurological disorder (FND) in women in their 30s after receiving Covid-19 vaccines.

Also: Researchers in Japan have found that cancer mortality is especially high after a person is "vaccinated" against the Wuhan coronavirus. Cancer mortality is especially high among people who are in their 60s and have received two shots, and among people who are over retirement age who have received a booster. He discussed what he meets with Angus Dalgleish, professor of oncology at St. George's, University of London. Campbell noted from the study findings that increases in all cause mortality increased in Japan from 2021 to the present. The study was conducted in Japan, so it focused only on that country, but the findings can almost certainly be extrapolated to the United States and other "fully vaccinated" countries as well.

And there it is. My spouse took both Pfizer shots at work, under pressure. Two days after the second shot he couldn't recall his work hours, his duties. He was evaluated twice that same day. Eric Hoaldt said his PCR test found he's suffering from moderate dementia. A neurologist sent him for brain scans, which showed no evidence of strokes, dementia. Yet three years ago, his dementia is progressing. Here is an acknowledgment of what caused it, so none of the physicians could figure out what happened to him. (insert rolling eyes here). So, as an unvaxxed spouse, what can I do to avoid getting it?

Well, CDC said the phrase "doctors are baffled" every time throughout these past years. This, really does not surprise me at all. Many suffer such terrible cognitive disorderace also, which prevents them from CLARIMING. You cannot fill a cup that is already full. I'm sorry to hear about your spouse. It's very tricky to deal with at times, as hospitals/docs are taking some time for FDU. Best wishes. I feel that the jabs were necessary the ONLY culprit, but there must certainly appears to be a massive epidemic, or possibly PANDEMIC of dementia starting at the moment. It's very sad and a particularly cruel disease.

A high school friend lost 3 shots of Moderna in 2020 and last year developed a very rapid heartbeat of 175-40 years old; he had cardiac ablation to control the problem. He died in the Pfizer or heavy lost loss and tipped his shoulder. It was then discovered that he had Stage 4 Cancer in his lungs, spine, and throat. He was seeing a doctor regularly, getting blood work done every 6 months. The cancer was undetected or given while his body as a Turbo Cancer. The hospital he was in for one hour of survival and has died in the other 15 days. He is fed through a direct tube in the stomach, has a Tracheal punch and tubes a cocktail of drugs every 6 hours. From my experience, I believe the Pfizer shots are Turbo Cancer. Doctors and hospitals would be necessary to give a say-out chance or nothing to slow down the cancer. I will pass this video on to him, and thank Dr. Mercola.

Getting straight up the Ivermectin would be a great idea, imo. A slightly different drug is Fenbendazole, I think it was called, which is a dog dewormer? Now you as interview with a man who had basically been sent home by doctors and advised to bunk straight into a hospice. Instead, he was walking in a vet clinic. Anyway, he ended up taking this drug instead. I checked out his way also taking vitamin C and CBD oil. Anyway, and result is he's still with us several years later and all the tumors disappeared. He mentioned that he was a very, very, very,

The best way to preserve overall health is to keep your blood running like water! Good circulation is upstream from good health. So it should come as no surprise that a vaccination that clots blood also would be implicated in dementia. Your brain needs to be a vascular system and needs good circulation! Keep your circulatory system healthy with a heart healthy diet, exercise (get out of Israel!) + a day), and all the other stuff Dr Mercola recommends.

Fascinating listening to Dr. Kevin McCarron and so nice to see someone treat a child's intrusion in a kindly manner. I also appreciate the inclusion of some fine small amount of data on Autoimmune as millions of us had little with continuing to put US satellites in space bearing down on the earth, and into the brain as well. This is genocide . . . . . With it becoming apparent that the planned future of humans is to be eventually implanted with devices to connect us to AI, becoming slaves to the New World Order, how are we going to be of use an sick and damaged the forms?

I wonder if AI is quick to injure or kill as you dropped or something bad happened or it didn't and that's why it got removed. Maybe PFs is the one one which takes a few years and has many side effects. Most over 65 have in has had two SC and then a PSo booster. All the young ones had 2 or 3 PSs.

From what I've read here, the jabs attack blood damage and prion shedding will result in our brains becoming mush and then an early death. (Plus increasing SC will exacerbate this. Also doesn't seem to realized this with continuing to put US satellites in space bearing down on the earth, and into the brain as well. This is genocide . . . . . With it becoming apparent that the planned future of humans is to be eventually implanted with devices to connect us to AI, becoming slaves to the New World Order, how are we going to be of use an sick and damaged the forms?

Or won't enable us to function in any manner that would serve the masters once we're immensely damaged. These global elites, once they have enough of us dead, will need a few of us to survive to maintain their mansions, with still need manufacturing, soldiers, technicians, farmers, and health care workers etc. to survive in the masters life style on earth. They're delighting in the genocide, but I can't see how they think their future world is going to function to their benefit.

I have been thinking about brain function and inflammation. Why are people going hungry in our area, where there is so much free food available? I realize it is not the best food, but it is much food goes to waste. there is no virus in wastefulness. This is a mindset - we are elderly friend and to call it, "a lack of righteous thinking" ? People believing that food comes from the grain at the grocer. People do not take advantage of opportunities to help themselves because they are waiting to be taken care of.

Like a toddler at a banquet, sitting under the table and crying instead of standing up and helping himself to what is within reach. This is a mindset that is being encouraged by our leaders. Our leaders are not leaders, they are dictators. Dictators do not want their people to be friend who is very concerned about food shortages, as she thought it fell out of me. That is the nature of her personality! Like it might be a good idea to have some seed and plant food during times like these. She tells me her concerns and then gets a deer-in-the-headlights stare! I suggest she might want to buy a few extra cans of food or water each week.

Many people find a false sense of security in denial and continue themselves nothing bad will ever happen to them. Perhaps people have been coddled in a world of safe spaces! Far too long! It is a very scary situation when I consider how many people have an entitlement mentality and expect to be taken care of! Poor poorly they regulate their emotions and strike out when they do not get what they want.

Not sure if we will have a black could event before the next election. Whether there will even be an election. The economy will crash! Or another plandemic with our liberties revoked. I am a realist, not a fear-monger. Special interests that will do anything to disrupt the election. This means they will create more widespread chaos. Are we also ready for a younger generation with provocative demeanor due to on the job vaccine mandates?

How long before doctors contact enough dots to realize that the Plandemic was designed by the puppet masters from the start as a trial to desensitize the planet? Not soon enough...

OK, now I'm concerned about the possibility of a reaction from the one J & J jab that I got just before they suspended it. I was where the Aztec Sanora cars or has some neurological effects such as the Guillain Barre syndrome that starts with tingling and weakness in the feet and legs. I've had these strange symptoms, but with weakness really but with tingling in my feet and legs that I thought might just be from the Covid-19 virus because I had it in March and I'm immunocompromised because I have Multiple Myeloma and I'm a cancer survivor. My GP didn't know any more than my neighbor, so where do I turn for the cause of tingling? No, I'm not a heart transplant patient but I'm sure I agree when all of my blood work was fine. I know the J & J and Astra Z are similar, except the J & J was one jab, the other 2. Since then Astra, I have not had any of the follow up jabs and never will. Any suggestions from anyone on what I can could possibly do that might help this?

I found relief from tingling in arms and legs and feet pain with synthetic (alocrabide) B1 Benfotiamine. I was actually taking it for something else and found this as a bonus. A lot of jab injuries to me look like low B1 too.

I suggest joining the Project Aviation Forum where there is a plethora of information about vaccines, what's in them, and how to detox. It's free to join, (supported by donations) though you have to be "vetted" at first to make sure you aren't a troll or troll. Its not just the plan! Many people have found relief from tingling in arms and legs and feet pain with synthetic (alocrabide) B1 Benfotiamine. I was actually taking it for something else and found this as a bonus. A lot of jab injuries to me look like low B1 too.

Is it the J&J shot? If you get Covid but did not receive any shots. Is there still a risk. Dr. Mercola writes alot about the J&J. I do not read much about Covid alone. I read it was a different Sars Cov2 in itself. I would like to read more about it. Most especially, I believe the majority of people that are members of this site did not take any Covid shot, yet still contracted the virus. Speaking for myself. It was the strongest flu. I have never encountered in my 63 years.

I believe Dr. Mercola is correct that the vaccine but also the virus causing cognitive decline. I never got the vaccine but had the virus Jan 2021(Covid but strangely enough) and have experienced memory loss ever since. I am relatively healthy (no meds, have pressure) I'm going supplements.Diet is fight. I was fortunate to have a Dr willing to write an exemption because I had Guillian Barre Syndrome in 1990 and haven't had a vaccine since.

My mother, an active, extremely healthy 94 year old passed from C-2 syndrome. She was the only member of my family to get the vax. She was an avid MSM watcher and despite our assurances, she got scared. I will never forgive.

These jabs just keep on giving, and our govt STILL has them on the recommended childhood vaccination schedule.

I am very concerned about the shedding proportion of prions and other contagious elements of vaccines. How dangerous is close contact and what is considered close contact? Can prions be transmitted by sitting next to someone, handshake, hugging, kissing, intercourse, sneezing, coughing, spitting sharing food or drinking glasses? Is avoidance of certain people we are in close contact with at work, school, church, gym even changing who we have been being the shots being overly cautious and extremely paranoid? prions.com , www.selfhelp

I read videos and always have. Have people lined up to get this shot without knowing what was in it to one of the greatest tragedies. That these prions can be shed to the unvaxxed is a nightmare. I want to know HOW they are shed and what can we do to protect ourselves. Or can we ?

Unfortunately I know this to be true. A PR in their Forties, an acquaintance, was died with cdj a couple months ago. Luckily they only lived for about 4 weeks afterwards. Left behind family with young children. So sad.

Anyone remember "operation nasty spend"? And who was behind it? Everyone is blaming JB when really for decades all of our own political figures have sold us out. We are the lab rats.
