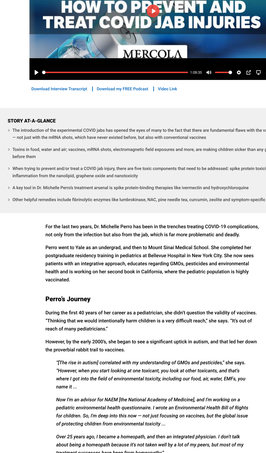
How to Prevent and Treat COVID Jab Injuries

Analysis by Dr. Joseph Mercola ✓ Fact Checked

June 05, 2022



STORY AT-A-GLANCE

- The introduction of the experimental COVID jabs has opened the eyes of many to the fact that there are fundamental flaws with the vaccine program — not just with the mRNA shots, which have never existed before, but also with conventional vaccines
- Toxins in food, water and air, vaccines, mRNA shots, electromagnetic field exposures and more, are making children sicker than any generation before them
- When trying to prevent and/or treat a COVID jab injury, there are five toxic components that need to be addressed: spike protein toxicity, PEG, inflammation from the nanolipid, graphene oxide and neurotoxicity
- A key tool in Dr. Michelle Perro's treatment arsenal is spike protein-binding therapies like ivermectin and hydroxychloroquine
- Other helpful remedies include fibrinolytic enzymes like lumbrokinase, NAC, pine needle tea, curcumin, zeolite and symptom-specific homeopathics

For the last two years, Dr. Michelle Perro has been in the trenches treating COVID-19 complications, not only from the infection but also from the jab, which is far more problematic and deadly.

Perro went to Yale as an undergrad, and then to Mount Sinai Medical School. She completed her postgraduate residency training in pediatrics at Bellevue Hospital in New York City. She now sees patients with an integrative approach, educates regarding GMOs, pesticides and environmental health and is working on her second book in California, where the pediatric population is highly vaccinated.

Perro's Journey

During the first 40 years of her career as a pediatrician, she didn't question the validity of vaccines. "Thinking that we would intentionally harm children is a very difficult reach," she says. "It's out of reach of many pediatricians."

However, by the early 2000's, she began to see a significant uptick in autism, and that led her down the proverbial rabbit trail to vaccines.

> *"[The rise in autism] correlated with my understanding of GMOs and pesticides," she says. "However, when you start looking at one toxicant, you look at other toxicants, and that's where I got into the field of environmental toxicity, including our food, air, water, EMF's, you name it ...*
>
> *Now I'm an advisor for NASM [the National Academy of Medicine], and I'm working on a pediatric environmental health questionnaire. I wrote an Environmental Health Bill of Rights for children. So, I'm deep into this now — not just focusing on vaccines, but the global issue of protecting children from environmental toxicity ...*
>
> *Over 25 years ago, I became a homeopath, and then an integrated physician. I don't talk about being a homeopath because it's not taken well by a lot of my peers, but most of my treatment successes have been from homeopathy."*

Old Truths Are Being Re-Revealed

Interestingly, the introduction of the experimental COVID jabs has really opened the eyes of a large percentage of the population to the fact that there are fundamental flaws with the vaccine program as a whole — not just with the mRNA shots, which have never existed before, but also with conventional vaccines.

Dr. Maurice Hillerman, for example, a former head of Merck who developed polio vaccines, has admitted these vaccines were contaminated with dozens of viral pathogens, including simian virus 40 (SV40), which can cause cancer.

> *"This idea of vaccination contamination was exposed again in 2017, when they found nano contamination with heavy metals in 43 out of 44 vaccines in a study out of Italy," Perro says.*
>
> *"And these nanoparticles, because of their size, are inflammatory. They cross the blood brain barrier. And I am sure, without a doubt, that's what's linked to this neuroinflammatory process that we see with kids on the spectrum, the rise in ADHD and another neurosensory/ neurocognitive issues."*

Glyphosate Worsens Aluminum Toxicity

Perro also cites research showing glyphosate shuttles aluminum across the blood-brain barrier in six different ways. So, glyphosate, the most widely used herbicide in the world, and aluminum are synergistic.

This, too, is likely part of the equation, because children are highly exposed to glyphosate through food, which then shuttles the aluminum from their childhood vaccines straight into their brains. Aluminum is added to many vaccines as an adjuvant, because it elicits a stronger immune response.

This, in turn, results in higher antibody titers, which is how they measure vaccine effectiveness. The problem is, by stimulating the humoral antibody system only, and not the cellular immune system, you create an imbalance that can eventually lead to immune dysregulation, with the worst outcome being cancer.

In short, vaccination is not nearly as effective as the multifaceted immune response you have when exposed to natural infection. This is even more true for young children. As explained by Perro:

> *"It really speaks to why children are immunologically different than adults. Children are not mini adults, because they have that other arm of the immune system, the innate immune system ...*
>
> *Children have a very robust innate immune system, and they have a thymus, which involutes with time as adults — ours are long gone. Because of this innate immune system, and increased NK [natural killer] cells, they're able to fight COVID.*
>
> *That's why children do so well with this virus. [They have] robust innate immunity, which is totally bypassed when you give somebody a vaccination. Dr. [Anthony] Fauci himself said in 2004 that natural immunity is better than vaccine induced immunity."*

Pediatric Side Effects From the COVID Jab

Once the U.S. Food and Drug Administration authorized the COVID jab for children, aged 12 to 17, it didn't take long before Perro started seeing injuries in her practice.

> *"I was amazed at how many kids were injured ... The types of reactions I started seeing were initially neurologic. Some of them in the beginning were simple but concerning, like tinnitus, which is ringing in the ear, and that could be horrific for a kid ...*
>
> *I had a musician who goes to Juilliard, and he had severe acute onset [of tinnitus] after the first the Pfizer [shot]. It got worse after the second. I have colleagues who saw Guillain-Barre ascending paralysis ... I saw cardiac [problems], myocarditis for sure, and abnormal heart rhythms, where he had massive breakdown of his muscle tissue, which is a very rare event in childhood.*
>
> *Then, I started seeing people develop symptoms who were unvaccinated, including myself. I got 'spiked.' That's what I call it, 'getting spiked.'*
>
> *[I said] teenage girls with heavy menstrual bleeding, prolonged bleeding, and other menstrual irregularities. There was a smattering of rashes, urticaria, hives — a bizarre host of rashes.*
>
> *So, this is the kind of stuff we started seeing, and this began happening last June [2021], after ACIP, the American Committee of Immunization Practice, said, 'Yep, 12-year-olds can be vaccinated [against COVID] ...*
>
> *Once again, we as clinicians ... have to sort out how to fix it with tools not in the traditional toolbox. That's what we're faced with ...*
>
> *There is a bigger agenda here, because clearly these vaccines are dangerous for kids. There's no doubt. The data is irrefutable, and yet we've proceeded. So, we're dealing with other agendas here ... I think parents need to rise up and protect their children, because this is not going away. If anything, it's ramping up."*

Preventing and Treating COVID Jab Injuries

When trying to prevent and/or treat a COVID jab injury, there are five toxic components that need to be addressed:

- Spike protein toxicity
- PEG
- Inflammation from the nanolipid
- Graphene oxide
- Neurotoxicity

Each of these can be modulated in a variety of ways. "That's why we have to use an entire menu of things when treating a reaction from the COVID vaccine," she says. A key tool in Perro's treatment arsenal is spike protein-binding therapies like ivermectin and hydroxychloroquine. She explains:

> *"If you're making spike [proteins], even though kids don't have a lot of ACE2 receptors, those spikes are everywhere. In mice, it is shown that they cross the blood-brain barrier. They're disseminated, and then they tend to focus in your area of weakness.*
>
> *They go into fat-loving tissues, they go into the ovaries, they seem to go everywhere. So, binding the spike protein, that's one aspect, and there are different things you can do, both pharmaceutical and non-pharmaceutical.*
>
> *My favorite is ivermectin for the spike. I was giving kids 12 milligrams, initially, once a day. I went up to 12 mg twice a day for Omicron, but it depends on the size of the kid. For bigger kids, it's 18 mg twice a day.*
>
> *I didn't see any toxicity with ivermectin. I've used ivermectin before, mostly for parasitic infections, and I never had any problem with ivermectin. I have not used hydroxychloroquine before, but now, for Omicron, I would use hydroxychloroquine, 200 mg twice a day.*
>
> *I use a bit of quercetin and zinc together ... To decrease inflammation, especially 6.6, you also want to use a lot of immunomodulators, and a lot of supplements can do that."*

What's in Perro's Toolbox?

In addition to ivermectin and hydroxychloroquine to bind the toxic spike protein, and quercetin and zinc to boost immune function, Perro also uses the following remedies for the prevention and treatment of COVID-19, and the prevention and treatment of COVID jab injuries:

fibrinolytic enzymes like **lumbokinase** to prevent blood clots and digest existing clots, especially if your D-dimer level is elevated, as this is a biomarker for clotting. For this to work, however, you must take it on an empty stomach. When taken with food, it acts as a digestive aid, but when taken an hour before food, or two hours after, you get the systemic benefits
N-acetylcysteine (NAC), which inhibits expression of proinflammatory cytokines, improves T cell response, benefits a variety of lung problems, and inhibits the hypercoagulation that can result in stroke and/or blood clots
Pine needle tea, which has antioxidant, antimutagenic and antitumor benefits
Curcumin, to quell inflammation
Zeolite
Whole foods such as garlic and ginger
Symptom-specific homeopathic remedies
Nebulized hydrogen peroxide and oral/nasal rinses with peroxide and iodine

I would also recommend getting plenty of sunshine, as infrared rays, especially the near-infrared spectrum, triggers melatonin production in your mitochondria. Melatonin is a potent antioxidant, and it increases glutathione, which is crucial for efficient detox. Melatonin also increases mitochondrial efficiency and energy production in the form of ATP.

Of course, eating organic is key since GMOs also have been demonstrated to decrease glutathione — the master antioxidant — and increase oxidative stress, which is the basis for all chronic disease. If you're prone to sun burn, it could be a sign that you're eating too many seed oils high in linoleic acid (LA), so to reduce your tendency to get burned, cut out all seed oils from your diet.

That includes restaurant foods, processed foods and condiments in particular, but also conventionally raised chicken and pork. A very low, virtually zero seed oil diet is probably one of the best ways to prevent sunburn, as well as chronic degenerative diseases, including heart disease and cancer. Adding in more whole food vitamin C can also be helpful for preventing sunburn. Acerola cherry (Barbados cherry) contains some of the highest amounts of vitamin C.

More Information

As noted by Perro, recognizing there's a problem is always the first step. So, first, we have to recognize that our children are under toxic assault, and in many instances, the harming of children's health appears to be intentional.

Step 2, then, is for parents to take back control and remove the systems that have taken over and are harming their children. While that may sound like an unsurmountable task, it doesn't have to be. It begins with cleaning up your family's diet, using food as medicine, growing some of your own food and getting back to basic principles of health and health care.

> *"We have to get them out of this tyrannical system where people feel they have to run to the physician for every bruise, cut and boo-boo. Quick, call the pediatrician!*
>
> *Not so. Parents have lost that ability and we have to regain it. Think about when we were kids. How often did you go to the doctor? I think I went once as a child. Our parents had some knowledge, so we need to regain that."*

Perro also believes we must begin to create parallel systems and structures, as suggested by Mattias Desmet, Ph.D. The power of this strategy was demonstrated by Vaclav Havel, a political dissident who eventually became the president of Czechoslovakia.

A parallel structure is any kind of business, organization, technology, movement or creative pursuit that fits within a totalitarian society while being morally outside of it. Once enough parallel structures are created, a parallel culture is born that functions as a sanctuary of sanity within a totalitarian world.

"Eat dirt" and put every probiotic strain you can find to work creating nutrients, cleaning up toxins and ridding the gut of unfriendlies that exude endotoxins. Up your dosage of Vit C to bowel tolerance. Chlorella/clay/charcoal. Multi early and via nebulizer. Sun, sauna and energize your watery internal environment and straighten out twisted proteins. Attend to the endocannabinoid system, Cheech & Chong were on to something. Nicotine can out-compete spike for positives on receptors. Find your fearlessness and escape the contact of pandemic thinking and return to parasympathetic restoration of scared cells. People in numbers have turned to hoarding, prepping and praying to the sky because Brandon and Fauci scared em to death and locked them into fight/flight, a deadly disease in itself... but they should be scared, we are awakening and comin for em.

Don't know that I saved the particular comment but Dr M recently re-posted his article from the 2009 WHO-generated Bird Flu scare. One commenter who had/has lyme posted they were being vaccinated HCQ3 with a drop of iodine. This was from 2009! Begs the question of what fingerprint solutions (only recognized 1 or 2 posters still blogging today), weigh under the table, in-house or outsourced? Where are, now, the congressional discussions (with an Irish accent) of balancing the pare vs sympathetic response from Chris Johnson, John Bergman, The Sabbath With Dr. Tony O'Donnell - CHD TV (Livestreaming Video & Audio - free childrenshealthdefense.org/show-the-solution-with-dr-tony-o-donn... Keep in mind, we have all been subjected to the FBAR and CIAFTRNS weight gain programs developed by our respective gov't health agencies working in lockstep (thanks to Rockefeller Institutes outline from 2010 or even earlier).

Rrrrrad...I promoted "huffing" peroxide from a faced spray bottle back in '01, and received many Thank Yous....The same H2O2 that can be used internally the same H2O2 that is generated by Mega/W VI C... The same H2O2 immune cells use to oxidize pathogens, cell debris and cancer... The H2O2 REDOX.

Oh Yeah? No possible. I joined much later than that. Interesting that radiculized lyme was already included.

Captain: As usual excellent. In the "third world" country of Ecuador, I notice no shortage of baby formula ??? Creating shortages and increasing prices has been the capitalists' set plays for decades if not centuries. Remember the doubling of food prices in March 2008 and the concurrent rise in protestors? Remember the all embargo of the early 70s? Everyone, including retirement funds, suffered but not the oil companies and banks. www.democracynow.org/...The_Food_Bubble_how_wall_street Since Clinton signed the Commodities Futures Modernization Act in 1998, most of the restrictions on futures trading have been removed.

Only used to be traded on the floor of exchanges and only licensed traders that could actually physically take delivery could trade. Now the floors no longer exist and the trading is done on high speed computers run by Wall Street Bankers. They make money on the prices go up AND as the prices go down. They control the prices and they feed supply/demand lies to their owned and controlled media to fool the people. What surprises me is that it took almost 8 years for Wall Street to get up and running on the inflation scares. The inflation is created and will continue as long as money is created of interest. At 1% interest, debt doubles every 14 years.

We are not taught that mathematical fact in university economics. Think about it. The Ukraine war & Putin are blamed for food price increases. Wheat was in place in Ukraine harvested. The war started in Feb. Most grain exports had already been made. It costs money to store grain. Why keep it when you can make money by shipping it? As a buyer, why wait to get your grain? You want to get your supply because it will be another price when more is available. Another question how much grain is in storage in the US, Canada, Argentina, Australia, South Africa and other grain producers? MSM financial analysis is BS.

Hi Pit. Rose et al, I wanted to say thank you for the great list of things, very well thought out and summarized, and also for the fearlessness and calling out the fear runs. Brave!!! Further, I wanted to add that echinacea supports the body's production of macrophages, and is used not only to ward off the early stages of a cold or flu, but also as a lymphatic cleanser. I am thinking this might be helpful in cleaning up nanoparticles or maybe even graphene oxide injected into the body? The question for a very skilled naturopath, is how this may (temporarily) lift the immune system where it has already been lifted by the "vaccine". And this is a very important question to ask. All best wishes and good health and wellbeing to all.

As a family in the U.K. who didn't take the vax we have been suffering from being near people who are with varying symptoms even months after we see't methylthion with plus vit c/ pepsin/ enzymes/ the ph/p/ pineapple and blue for the fibrins, pine needle tea, homemade hydroxychloroquine, okra, asparagus, shiitake mushrooms, I also use a homeopathic for spike protein and graphene oxide, I hate going into crowded areas as I start to get symptoms immediately. I don't know how some people seem unaffected!

Something happened to me when I was around a freshly vaccinated friend for 2 weeks. No one talks about these vaccines shedding. I had a horrible allergic outbreak, a brief cold and something is destroying my vocal cords so I can barely talk any longer. No doctors conventional or holistic will discuss it.

The same thing happens to me when I'm close proximity to the jabbed, especially in rooms that are not well ventilated. I am a very sensory sensitive person, where I'm bothered by the smell of some fragrances and chemicals and it makes me feel something radiating from those who have received the jab. I use pine needles (sometimes I just chew them and other times I make tea), MAC, zinc and quercetin, CDS, as well as herbs/vitamins to help me feel better after contact.

Thanks happinana. Hydroxychloroquine is a version of quinine. Quinine was extracted from cinchona bark that is available on line. It is a native of Ecuador. Though the cases are mostly forgotten here. I make a tea. It will stave indefinitely because it is also an antibiotic, antiparasitic, antifungal, antiviral. I add a tablespoon, it is bitter, to a beverage along with a pinch of unrefined sea salt. Like hydroxychloroquine it is an ionophore that will help the positively charged ions like Zn++, Mg++, Ca++ Fe++ enter the cells. I use it to avoid leg cramps. Without the proper & quinine & alcohol there is pain and tons the British would not have survived the tropics. When I was younger and still playing in senior soccer tournaments, it kept me going without cramps until the end. I was able to play till the age of 72 when I came to Ecuador. Old people do not play soccer. Old in Ecuador is 50 for athletes.

happinana thank you for all you wrote and listed! Bravo! You know how to take care of health very well, and how to avoid the perennial "oh no, scratch/bite too, let's call the doctor" dynamics. Please see other posts of hydroxychloroquine, I forget about echinacea, it may play a role, I believe, in cleaning up some of the injected nanoparticles and graphene oxide, if I am not mistaken. God bless.

Thank you Captain, and Rose, and Pit, and also unvaxxed. But when I'm around someone who's recently had it, I know within seconds. The left side of my face swells and my left eye stares shut. Sometimes I also get nasal drainage, throat tightness, heart palpitations, the veins in my elbows swell and feel like they'll burst, and the blood pools in my legs. I get up, walk 10 feet away from the person and my eye pops back open & the whole reaction dissipates within minutes. It's insane. My EPN saw it happen in real time, and was so worried that she did a D-Dimer on me to make sure my blood wasn't clotting.

Thankfully it was negative. If I'm around them long enough I'll have cramps, menstrual disruptions, waves of hives, skin reactions, heart palpitations, tummy issues, and nausea for 3-10 days, among other things. If they touch me without gloves, my skin will break out into sores in the area they've touched me on (usually if it's a handshake where their thumbs land). It's no joke. My PT office (all unvaxxed) tells me I'm their vaccine detector! All of my doctors told me to limit my time around vaxxed people and get away if I have a reaction.

They believe me, but don't know what to tell me. I can tell you though, it DOES dissipate as they get further out from their shots, but if I'm in close contact for long periods of time, even 8-12 months out, I will feel under the weather the next day and it messes with my cycle. I use reduced or liposomal glutathione (I can't take NAC) and it seems to tamp down the reactions a bit, hopefully it will continue to get better with time as fewer people get jabbed. Avoid them if you can!

I'm very happy to find this article. It is quite comprehensive, both as to the threats contained in the vaccines and as to the many remedies. This information is apparently quite critical to get into the hands of over half the adult population in most of the countries around the Earth. One question I still have pertains to the apparent fact that there are certain lots of both the Pfizer and Moderna shots which have a hundred times the danger to life and health compared to most other lots of the injection. I am interested in what exactly has been found to be the critical element in these particular lots that causes so much harm to the injected subject? If anyone has an answer to this, it would help those of us who are the most severely affected to better choose among the many solutions offered here.Dp Dr Pierre. jackforce42.wordpress.com/2021/11/11/exclusive-100-of-covid-19-vaccine-...

Hi stonehardor, your link is from 2021 right? Here's a recent interview Dr. Brian Hooker had with Dr. Mike Yeadon, detailing all sorts of red flags and fear inducing issues: free.childrenshealthdefense.org/shows/doctors-and-scientists-with-tony... - more up to date, the failure to adjust for weight of those being injected, injecting directly into the blood stream, varying the mRNA content in the shots, and more. Safety concerns were tossed out the window as the US CDC is pushing for ever increasing pharma funding. So sad, this military-based agency appears to have a goal to suck funding from all other grant projects to enrich their own agency and already overflowing coffers of Big Pharma. Captured and now running rogue. The Drs. Tony and Rochelle shows still persists! (AAP) forgot to mention, in the intro to this interview, Dr Hooker is talking about his 23 or 24 pediatrician suits speaking a full sentence for the first time.!

Thanks rresilrose. Yes, Mike Yeadon speaks of a lot of variability between different lots of the vaccines, OR a lot of variability of how many (say) spike proteins get generated within one body or another body, dependent upon more the amount of leakage from the muscle, or other individual factors. He more implies it is happenstance within the body that determines how much dangerous effects an individual shot causes. He is not talking about designed differences (ingredients) between lots that were produced by Pfizer and Moderna. So I don't find any answer here to my question on what it is exactly in some lots of the shot that caused as much as a 100 x increase in severity of "side effects". Good by, but I'm still looking for material on this. Something in certain lots is causing extreme increases in physiological damage.

Ah, That's missing because it was in the other interview of Naomi Wolf or Reiner Fuellmich, Viviane Fischer and the Corona Committee I posted 1 or 2 days ago. (BTW - Really worse than cattle being shot up: one is called titration to body weight of the individual, the other is a highly known technique where the vaccinator inserts needle then pulls back and looks to make sure no blood is showing, insuring the needle is not shooting into a vein. John Campbell in the UK has been on this topic for quite a while). Here's the link: The Blue Flower: Naomi Wolf - www.bitchute.com/...ES2GzTauPVCA - NOTE: this is summarized from released Pfizer documents, NOT a peer reviewed paper, yet. I am NOT a doctoooor. ;)

Hi Stonehardor, A) It would seem to me, if the immune system recognizes self as non-self, attacking whatever is non-self, then to reject Anything. B) All vaccines are cause autoimmune attack! Imagine foreign material in the bloodstreaking every cell in the body, and in some cases even crossing the blood brain barrier! Once foreign material enters the bloodstream, it is no longer recognized as self but instead, are treated as non-self by the immune system, which now attacks the body's own 'warped cells' !

If people understand the basic function of how the immune system works, they might make very different decisions. I think this information is terribly important. B) Consider that the injected material is not chemically converted by the digestive processes. Gads! C) And what is all this nonsense about "smart" injecting into the muscle? It makes no sense to me that the vax does not enter the bloodstream at some point! It would have to be splayed by capillaries and transported via the blood.

D) Oh but there would be so little of it? Does it take a lot of oil to discolor a puddle of water? According to the FAQs listing "vaccine" ingredients on the CDC and FDA websites, if the vaxes have petroleum-based polyethylene glycol, then all it would take to one little drop....of that ingredient alone? And what is the result of mixed chemicals anyway? Any experts best guess. E) To those who think these "vaccines" are going to help the immune system, I believe they are gravely mistaken.

To inject messenger RNA into the body is an automatic recipe for autoimmune attack! The immune system depends on a balance of various components, all acting in harmony and dynamically interactive. If the one saw is blind, one side is weak and the other over active. Thirty where the side effects ambush enhancement are false/misleading, if you ask me. I am not a doctor, but a very well read layperson. I urge all people to read books about the immune system. This will lead to knowledgeable decision making.

miranda, thank you for a careful parsing of all the ways the messenger RNA injections are a threat to the immune system and how injection of anything is an insult that probably can't be handled by the immune system, which was developed before injections, when all substances first had to be taken into the lungs or stomach and intestine before actually entering the domain that the immune system must protect. I hope my pointing out that certain lots of the shots are up to 100 times as toxic as most of the other lots didn't cause you to think that I was an advocate of this technology.

There are adverse reactions recorded in VAERS to all lots of these treatments. And we know now that only a minor percent of adverse reactions experienced ever get recorded in the VAERS database. So in case there is someone there who thinks I might be advocating this shot just because I said some lots (and people don't even know which lot their shot has come from) are less deadly than others, I must clarify that I was not trying to imply that at all.

If you read the link I provided, you would see that certain lots cause serious damage in a very high percentage of those people given an injection from that lot. I wrote my request for more information on what was different about the drug in these "hot" lots because from someone like Dr. Pierre they might provide additional information on treatments for the poor souls who happened to get shots from the "hot" lots.

In the referenced link: The VAERS data shows that there have been 106 times as many adverse reactions, 189 times as many deaths, and 138 times as many hospitalizations due to the Pfizer Covid-19 jab from there have been due to all other shots.

The VAERS data is not perfect, but it is the best we have and it is the only data we have to work with. Dr. Pierre has spent hours and hours of his time, and has spent his own money, to make the data more useful. He has made it easier to see that the Pfizer shots are far more dangerous than the other shots. He has made it easier to see that certain lots of the Pfizer shots are far more dangerous than other lots of the Pfizer shots. He has made it easier to see that the Pfizer shots are far more dangerous than the Moderna shots. He has made it easier to see that the Moderna shots are far more dangerous than the other shots. He has made it easier to see that the Pfizer shots are far more dangerous than the other

influenza vaccines combined. Very bad Average lot size of the Covid shot were about 1000 vials, each good for about 5 shots, or a total of a dose of about 5000 per lot. Now notice that in the "hottest" lot there were 3563 adverse reactions! MOST of those 6000 recipients had a reaction!

Hi Stone, not to beat a dead horse, but here's the latest on the topic from Dr Jane Ruby, her interview w Team Enigma who broke the news on the hot lots later last 2021, and have been following the latest developments and investigating our contents ever since: Dr Jane Ruby | Pfizer New FDA Reports From Team Enigma - www.bitchute.com/...//C2Gn6ZUFdK/ - - keep in mind, Moderna initially rolled out either even more mRNA than Pfizer, something like Moderna was at 100 micrograms v. 30 micrograms per dose. Moderna reduced their micrograms per vial amount after the initial reports of injuries. Takes way too much time to dig to the bottom, so I wait for someone to clearly summarize.

Hi Stonefather, did I think what you were suggesting I thought? Heavens no! Sorry for any misunderstanding. I am merely suggesting that if the general population understands how the immune system works—read good books about it by MDs—then they will make more informed decisions. That's all. ---It would be my understanding that various batches are more toxic than others and may possibly contain different mixes of ingredients. What a sign of foul play! Good lord. Those releasing this to the population should be the first to volunteer to be injected with those exact batches and with those same exact ingredients.

I hate to admit that I took the jab. I have always been so strict with what I put in my body. Well, now I have bad effects of the shot. I am now taking Ivermectin, Quercetin, Stinging nettle, and Bromelain to help with the effects. Making slow progress. My daughter who has RA took the shots because her doctors advised her to do so she is a mess. She goes to the same primary doctor as me. I think they may have gotten to him he was not so keen in the beginning then after all of a sudden pushed it. The last 3 shots. After the last booster 1 week later she started to itch and it got worse she went to our doctor who told her she has poison ivy It was winter here at the time. I never believed that is what she had. They put her on tonks of steroids the side effects from the steroid made her sicker.

Finally, he sent her to a dermatologist so he did not know what to do (REALLY). She then told my daughter it is from the shot. This woman knows what she is doing and she is now starting to get better but it is going to take a long time. I have been urging her to go natural and I believe she will. I am so angry at the CDC FDA big Pharma and our leaders for dragging us sit down this dirty road. They are all making money off of what they have done to us. Thank you Dr. Mercola for standing by all of us and the fight you have gone this. Without you and this blog many of us would not have the information needed. Many thanks to all who write and help the rest of us.

I'm sorry to hear about your troubles! I also stopped using otc meds and use naturals remedies. I don't trust what doctors or the government say anymore. I'm slowly relying less on them and started being more dependent on my own. The government is supposed to work for us not against us, not so in the last few years and I believe that this is not right. If we have the power to vote them in we also have the right to kick them out!

I try to avoid being around vaxed people. I don't want them shedding onto me or my elderly mother. Just 3 years ago who would've ever thought that the world would be like this. I wish we could go back to the 70s.

The Satanic led NWO One World Government murderers know in 1993 that glyphosate helps aluminum cross the blood-brain barrier it different ways. Twenty-nine years ago. Monsanto has been the chief manufacturer of glyphosate. We will destroy Monsanto and charge its CEO's , present and past (if still living) and corporation officials with murder . . . . In due time the history books will record their evil deeds for our posterity forever.

Monsanto has injured and caused premature death in more people than the Pentagon and Kremlin combined. Because it is a corporation the actual people who cause decisions to put a known poison into our food supply and environment will not be prosecuted for crimes against humanity. Nuremberg trials for corporation CEOs is a nice idea. The worst has already happened. Monsanto was forced to merge with Bayer to avoid massive dollar settlements for damage caused. When civilization is rebuilt corporations should not be allowed.

I would like to see that educated people are not urging anyone the term "vaccines" when they talk about the new poison. Using it means that they agree with the new definition and the upside down of the present we are living . Language creates reality and is very powerful .

Well said! Governments have spent eyewatering amounts on careful and manipulative use of language. Here in the UK, it is billions of GBP spend on the psychological abuse of the population. You are right to warn people against being complicit and collaborating in the manipulative and malicious use of language and words. I am now realising why my Father always referred to the GP (general practitioner) as the Quack. Never did he refer to seeing 'the Doctor', it was always 'seeing the Quack'.

From my experience chlorella and spirulina do remove some metal like aluminum, lead and others from the body and brain, just be patient. I would say that we should NOT comply with any vaccines because most of the diseases have been eradicated so far get jabbed believing we will be protected is a fabricated lie. I would even say that all vaccines makes us sick and only the Pharma profits from our naivety and stupidity.

The U.S. Constitution protects in ways that are major impediments' to special interests'. Even getting, unlimited funds to be recognized as speech, has not been removing popular foundational protections fast enough for those who would be cream'. In a desperate End Run around the U.S. Constitution, while the complicit media restrictions attention to Ukraine and Covid, rogue elements within the U.S. government are presenting amendments to the World Health Organization's International Health Regulations. These amendments had not been Public before April 17 2022 and may be approved this week in Geneva.

With the U.S. being a member, some of the U.S. Constitution would become unenforceable. There were no town halls, no national referendum and no constitutional convention for any populace should fill the streets. Peter Boggs MD has a fact filled video "Extreme Deadline" on Brighteon.com . This End Run is nearly something and the domain name www.tobyhenry.com links directly to the video. In addition a printable file of action steps is at www.printfriendly.com/p/g/CDFSM .

Dr. Pierre says "Over 25 years ago, I became a homeopath, and then an integrated physician. I don't talk about being a homeopath because it's not taken well by a lot of my peers, but most of my treatment successes have been from homeopathy" Very interesting and informative!

@MyeloTube - because Homeopathy utilises Frequencies, there is conflict with being in the EMF soup which is today's typical environment. I did a course of Field Control Therapy, which some call Causative Homeopathy. It uses sarcodes and nosodes in the remedies. The Practitioner always reinforced that during the 2 day protocols, I must remove myself from all electrical and electromagnetic fields and RF radiation - non-native sources, that is. So no use of electrical equipment, no being near cabling or wiring carrying a current, etc. It is possible that the frequency medicine that you tried was interfered with by other sources.

The Pay-Face-Pass. Using facial recognition to buy and sell.

www.watchdognews.org/mastercard-moving-to-let-people-purchase-goods-wi... I will not adapt to this kind of system. However, I am growing high quality food, so people who want my surplus will have to figure out a way to buy or barter for it. Food prices keep pace with inflation. Have you seen the shortages of heirloom nursery stock this year? Little is avoid except hybrids and GMO varieties. I will be propagating heirloom nursery stock for local sale. There is opportunity for people who can do simple things well.

The more shortages I experience, the more I find I can be content doing without many store bought things. I keep simplifying my diet, too. I have no need to impress anyone with my wardrobe and lifestyle, either. So, spring and fall, wild mushrooms are abundant. In summer wild berries to eat and preserve. Did you know that many early settlers lived largely on berries in summer—esp. women and children? We, either until recently (Many people also are little but berry pies in summer during the Depression—and I doubt they had much sugar.) Lovely, large wild cherries will be ready for picking within a month, too. I think we will always get game meat of some sort or "fish".

There are plenty of "weeds". Some of the easiest crops to save seed from are beans, corn, squash and tomatoes. Every few years, I get enough cabbage seed to tide me over for several more years. As long as a person raises heirloom varieties (varies seed), a few perennial herbs, has an established apple and plum tree, and maybe a few grape vines, it would be hard to go hungry. Anything else you plant is a bonus. Supper last night was a simple meal of homegrown oyster mushroom soup and home-canned apricots. Maybe this year, I will dig more fruits that just apples, pears, prunes and a few cherries.

Let's talk about sugar substitutes. There are some things you need to sweeten, esp. when preserving food. I lost my taste for sour rhubarb stalks after I sugarcoated them. Honey and maple syrup are obvious substitutes. Stevia stevia will if you stock up. You can grow and dry stevia leaf. Drying fruit concentrates the natural sugars. Dried apples allow for winter lunchboxes. I reconstitute prunes in half apple juice and half water. (Rarely. I may have leftover white grape juice to use up and substitute that.) If your juice is very sweet, you need nothing more, but I also like to dissolve a dusting of stevia white liquids and still hot.

Fruit can be canned in its own juice (if enough) or apple or pear juice that you have canned or pressed earlier. Apple juice can also be frozen although plastic jugs are best. I worry less about plastic leaching in the freezer than when exposed to heat. There are sprays that can be diluted. Rice, sorghum, molasses. A syrup can be made from watermelon or apple juice.

You can grind and make your own syrup from sugar beets. There are sweet herbs that can be used in various ways, such as laying a branch of sweet cicely on the bottom of a pan before pouring in an egg custard. Yogurt and buttermilk can add a sweet/tart flavor. Adding leaks (hilarious, peppermint) or juices to recipes instead of water. You can get by without sugar when making applesauce if you use sweet summer apples and include the peels. It will give you a darker color, though.

Adding cinnamon to applesauce further sweetens it while also helping control blood sugar at the same time. Substitute mashed banana, sweet potato or pumpkin puree or applesauce for part of the liquid called for in recipes. Can add apple slices or applesauce to casseroles and stir-fries. Try this combo stir-fry: marinated/dredged chunks of firm, once, apple slices with your favorite homemade stir fry sauce (apple juice, water, seasonings, garlic, ginger optional). Very humble fare.

Ed... I have thought about that. I learned from watching others. Always meet buyers at a milepost along a major highway junction for cash. Not on the property. We have a very unique neighborhood security system that would only be enhanced during times of unrest. We have proactive neighbors, who form a tight knit group—very skilled and talented individuals—helping each other and watching every car on the road like a hawk. There are few cars, mostly just mail delivery and an occasional utility vehicle, not even garbage pick up. People in unrecognized vehicles are often questioned if they stop along the road. Slowing down raises suspicion because outsiders have no business on the entrance road.

There is a low tolerance for crime among the local population—the crime rooter last year was 3 relatively minor thefts... mostly crimes of absolute stupidity by people who thought they could get away with something. Earlier, a case of poaching was referred to another county for trial with a no-nonsense judge presiding. If so law, it would revert to eighteenth. Nothing like what you see people getting away with in places where there is no prosecution for taking a gunny sack into a store and absconding with $999 worth of merchandise. Natural barriers prevent easy access on all sides. The only way in and out is by road this twenty gates—most call ahead for open gates.

There are enough unmarked dirt on gravel roads on the property that a person could easily end up in a swamp or stuck in the mud if they did not know where they are going. Some roads are only used on the summer days. Feed our shooting range? It would not be the first time we felled a tree across the road behind a trespass vehicle. (It is even harder to get out than get in.) In a crisis, access to the area could easily be sealed off and made impossible to outsiders. No one is entirely safe, but our situation is better than most. There are easier pickings for those who would profit off the honest labor of others.

andrusadronner... Why would I need a 'service' like this if I am not dependent on gov? Does this mean they will not deliver my mail and let it pile up somewhere? I see no benefit in (voluntarily?) signing up. I already get email notification exact tracking when packages get shipped. I will prob not consider traveling again and needing a passport, even though I was able to get an unchipped one without facial recognition during the last cheat-class. Just like my unchipped driver's license which was automatically renewed online for 6 years using the old photo.

Govt has many examples of systems being hacked. The goal of our lives should be to make big govt unnecessary. We can be responsible for ourselves. Glad to hear you planted the trees and assume you are in a northern climate with 4 seasons. The best time to plant a tree is 20 years ago. The second best time is today. I hope your trees grow fast and thrive. With standard nursery stock, it usually takes 3 years after planting to enter production. They will help get you free wetness. Once I fill my pars with canned fruit recipes, my thoughts turn to dehydration.

-Shed sparkling cider and wine.) Dried apples are so good for winter lunchboxes. Store bought prunes do not begin to compare to home-dried. Prunes must be completely dry, though, to be shelf stable ("snap"), not bendy or moist. If you like them chewy, freeze them. Prune leaves are many cure -us a filling in baked goods, pureed as a sugar substitute, reconstituted and added to stews, etc. You can also chop and substitute prunes for cherries in many recipes as both are "stone fruits".

The fact that most doctors have no idea how to treat COVID jab injuries, much less cure them, and that this post offers 5 ways to attempt to address the damage clearly illustrates that these injuries are not 'side effects' they are direct and serious effects of the jab. The only difference appears to be the severity of the many injuries caused. Many of the people I have talked to about their injuries express shame and avoid the issue - as if they were somehow at fault - and at the most basic level, they willingly submitted to an unfounded medical "prevention" that makes no claim and no attempt to cure COVID. Those who promote and promote the jab also have severe denial issues, being guilty of advising people to be damaged.

Those who actively participated in manipulation to force people to be jabbed - have more need for denial. Those meaning mums off the jab are the most severe offenders - and the most in need of denial techniques. We know how to cure COVID. We know the theory and the practice of curing COVID. Unfortunately, we appear to have more jab victims - although many appear to (we are not certain because nobody is testing much less measuring) than COVID victims - where a victim is defined as someone we cannot cure. The jab, it's marketing, and its mandates are "avoidance of cures" and ignoring of the cured.

Yes, let's stop calling all these end results - side effects, with so much revealed from what little has been released in the Freedom of Information Act documents. Reveal as soon as negatives showed their ugly heads, studies were shut down or manipulated. When so much effort is put forth to suppress the horrible outcomes, to push blame anywhere but where it belongs, with power brokers with ties to MIT enforcing the stated goals of the MIT it is hard not to see those negatives for us, an end goal for the Predators. These are not side effects, they are the desired effects.

Yes? We have all been exposed to numerous toxins, like PES (in nearly all women's cosmetics). Suspect we have also been exposed to graphene in myriad tech devices. How do you know if injected to bloodstream whether or not some reaction may occur?

Great info as always. So far I haven't personally seen anyone injured by the jab but I'm sure there are plenty of them out there. Just about everyone I know in my area has gotten 2 or 3 jabs, and some with 4. It's good to know how to advise people when bad things happen, and it's bound to happen. Keep the good info coming.

Jagainst my advice(my 24 year old daughter got jabbed last October - (no booster PTL) she has a genetic predisposition to cysts (and not methylating properly) the rise and has stated her periods are worse than ever (she has acknowledged it's from the jab) I have suggested the Rico protocol - Vit-D, Omega 3s, magnesium, and just gave her my hydroxycloroquine (B12) she is now considering a hysterectomy (she wants no children) in lieu of the extreme nausea, pain and excessive monthly bleeding... please, any other advice i could pass on to her?

She moved from New York to California? I wonder why she didn't move to another state where there's more freedom. Those are two places that I never want to go unless there is a 360 degree turn around in the world. I think it's wonderful that she's helping people.

I've had good results from tenemiso, and have to assume I got "spiked" because I have "vaccine refusal" along with refusal to become a hermit. (As opposed to "vaccine hesitancy", a manipulative term designed to denigrate people into compliance, as if they were pouting children not wanting to comply with a parent's request.) However, I also have FQAD, courtesy of allopathic "medicine," and hydroxychloroquine should not be taken by those who have EVER been exposed to a fluorine-containing Rx (The most obvious being the fluoroquinolones, but including flagyl and MANY other Rx because fluorine is an adjuvant. Depending on people's ability to detox fluoride, those who have used fluoridated toothpaste, been treated topically on their teeth with fluoride, or who drink / have drunk fluoridated water, should also consider the ramifications of hydroxychloroquine added to existing fluorines in the body, and perhaps choose tenemiso.

As a newer member, I am interested in what you mentioned about "buffing" hydrogen peroxide from a navel bottle. Can you give a quick recount of this procedure, please? It sounds like a simple thing to do and may help my sinus problems. Thank you. By the way, I love the helpful information you share with you comments here.

I wonder why nobody offers to use Cordyceps Sinensis as an excellent help for the immune system.
www.ncbi.nlm.nih.gov/.../MED/27731... A few years ago, I those to the Sisters in Chicago. I could not warm up in the jacuzzi with really hot water and thought I would deal with pneumonia. I took Cordyceps 3 times a day. The dosage was twelve pills per day. After three days, no symptoms, no temperature. Healthy as a horse.

The Universal Antidote works on jab toxins by denaturing the spike protein. It oxydizes toxins, heavy metals and kills pathogens. It is non mutagenic and nonpoisonous. Watch the documentary at Theuniversalantidote.com and read testimonials here The Universal Antidote Videos Welcome to my channel. I am not here to cure, treat or diagnose. All the information shared is for education purposes. To help you take back control of your own health! This is a repository of vitamine dioxide videos. Included are documentaries, t.me/theuniversalantidote

I find it curious that Mercola has not interviewed Andreas Kalcker or Jim Humble about chlorine dioxide. I make my own. Here is a good explanation of how to do it. I bought 84% flakes of sodium chlorite, NaClO2. on line. 30g NaClO2 + 70g water = 100 g 30% NaClO2. Muriatic acid is available in most hardware stores at 34% HCl. To make 4% HCl as called for take one part muriatic acid and add 7 parts water. Combine 5 ml each in the shot glass as shown in the video, close the lid and store away from light. In 1/2+ hours repeat the process and in 24 hours you have yourself HCl which is amazing. In his book, Kalcker describes a Red Cross trial run in Africa that cured 90% of malaria in 24 hours and 100% in 48 hours.

Not surprisingly the study was buried. Testing for malaria is reliable. All it takes is a microscope. The plasmodium devils are visible by microscope. odysee.com/.../a4d20fc2f9b2 In his book 'Forbidden Healing' in English and 'Salud Prohibida' in Spanish is available on line cleanhandmj.com/.../products He has protocols for many diseases. It is a truly remarkable chemical. My oldest daughter, a school nurse in NJ suffered from tachycardia after her jab. The CDC helped immensely. My other daughter in tyrannical CA is still holding out. Make your own CIO2 and as Dr. Joe says, "Take charge of your health".

Hello friends and friends of the Dr community. Mercola. Finally, my plan is to make videos to alert Brazilians about the disgrace that these mRNA vaccines are left my mind and materialized. This is the link to my Rumble channel. A big hug to everyone.

Why you don't mention Chlorine Dioxide? which has demonstrated to cure the bad effects of the Jab as well as in the prevention of the Covid Bug!!!!! For me, you are one of the few which seriously analyze and study in deep the drugs and medicine but I cannot understand your purposeful ignorance of this treatment. You even not condemn or appraise or comment in any form of this outstanding medical procedure!!
