STORY AT-A-GLANCE

- The updated and expanded 10th anniversary edition of "Dissolving Illusions: Disease, Vaccines, and the Forgotten History," by Dr. Suzanne Humphries and Roman Bystrianyk, empowers readers with information, encouraging critical examination of vaccine policies and advocating for informed consent in medical decisions
- "Dissolving Illusions" is a seminal book that critically examines vaccine science and history
- The new edition includes 200 additional pages, offering updated data and deepening the historical context of vaccine development and its societal impacts
- The book challenges widely accepted views on vaccines, highlighting discrepancies between public health promises and actual outcomes, including the history of polio and smallpox vaccinations
- Through extensive research, Humphries and Bystrianyk present evidence suggesting that improvements in sanitation and hygiene, rather than vaccines, played a pivotal role in the decline of certain infectious diseases

In this interview, Dr. Suzanne Humphries discusses the release of the 10th anniversary edition of "Dissolving Illusions: Disease, Vaccines, and the Forgotten History," one of my favorite books on vaccines, originally published in 2013. I was honored to write the foreword for the update of this classic.

In that book, Humphries details how vaccine science has been misrepresented to portray them as safe and effective, when in reality they're neither. The vaccine industry has intentionally deceived us about the risks and benefits to make a profit, with complete disregard for the suffering they cause.

Questioning Vaccines Has Never Been Allowed

Humphries first became aware that vaccines might be problematic when she was working as a nephrologist in northern Maine.

> "I was not a pediatrician, so I didn't come at this from an autism standpoint or from an allergy standpoint," she says. "I didn't get in that until later. Early on, it was more about watching my patients who already had kidney failure experience worsening kidney failure after they were vaccinated or watching them bleed out after a biopsy of the kidney after they were vaccinated, because vaccines change your coagulation profile.
>
> That was shown as early as the 1960s by an Italian researcher named Del Campo. He did one of the first studies that really tracked biological indicators and children over days, weeks and months, and found antacid production, inflammatory markers, coagulopathies.
>
> In the end, he said vaccination is a trauma of considerable measure, and it should be undertaken with great caution. And yet, what we've seen since then is the number of doses and more vaccines to all of us, not just children ...
>
> I was basically watching adults have malignant hypertension, develop prostatitis protein in the urine, really nasty entities that are hard to deal with."

After a three-year long struggle with the hospital administration, who refused to listen to any of her concerns, she finally quit in 2011.

> "That's pretty much the history of my career. Being in the medical system, waking up, thinking that people around me would be interested in the medical literature that I looked at, which they never had looked at," she says.
>
> "Instead, I was ostracized and pretty much became a pariah. I just didn't want to be there anymore. So, so I left. But the best decision I ever made was getting free of those golden handcuffs, where you leave medical school with this huge debt, and then you feel like you don't have a lot of options after that. Pretty much every penny I earned went towards paying off my loans so that I could be free to speak up."

This is actually not unusual in the average medical school debt is about a quarter of a million dollars. Such a debt is indeed a pair of golden handcuffs that turn the physician into a debt slave, forcing them to work in positions with little to no autonomy when it comes to practicing the type of medicine they hoped they would when they applied to medical school. This is something I hope to address in the near future.

Dissolving Illusions

Shortly after quitting her job at the hospital, she wrote the first edition of "Dissolving Illusions" together with Roman Bystrianyk, who had been researching the history of disease and vaccines since 1998.

> "What we decided to talk about was the history [of vaccines] because everywhere I went, talking about the risks that was damaging my kidney patients, I was met with, 'Well, what about smallpox? And what about polio?'
>
> And so, because I had to answer that questions, I learned a lot of things that I wouldn't have otherwise learned.
>
> Roman, who had gone through the world's databases — he's a computer guy and he's real smart — put charts graphs and charts together [showing that the death rate for many diseases was at least 90% decreased, sometimes 99% decreased, when vaccines and antibiotics came into the scene. And so that was kind of the beginning of Dissolving Illusions.' We wrote the history around that."

History Is Repeating Itself

According to Humphries, who has been "knee deep" in the vaccination issue for 15 years now, there's a bigger picture that is only discernible when you look at the history of vaccines.

> "What happens over time is, we're able to sit back and look at everything that we have learned, and then re-weave it, and we see a bigger picture out of that ... COVID, which, by the way, was probably no surprise to you and was no surprise to me ... because if you do know your history, you know what's going to come.
>
> After the whole COVID debacle, and then reading about all the other vaccines, watching what happened with Gardasil, with the new flu vaccines, the old flu vaccines, and the childhood vaccination schedule just ever-growing, I sat back and I thought, 'Know this, this is just a repeating story.'
>
> Vaccines, most of the time, if not all of the time, are marketed to the public as one thing, and then, later, the public discovers that they're a different thing.
>
> For instance, with COVID the public was told it was just nine little particles of this virus put into saline, and it would stop in your arm. And then we have scientists that are now coming out — real bona fide scientists, real genetic scientists — who have broken down the constituents of the vaccine and are saying that there's so much more in there than we were told.
>
> Well, the same was true the smallpox vaccine. It didn't have smallpox in it. Sometimes it had cow pox in it, sometimes it didn't. Sometimes it had rabbit pox, sometimes it had the pus from horses, sometimes it had pieces of human guts and donkeys. And, and it was passaged back and forth between humans and animals because back then they thought would strengthen the effectiveness of this so-called pure lymph, which was anything but pure.
>
> So here, the public was told one thing, their doctors start crying out saying, 'Wait a minute. This disease was not bad enough to cause this problem with the vaccine. ... Every vaccine that has come out, the public was told one thing, the effect is completely different. Doctors come out saying this isn't what it was supposed to be, the doctors are concerned, the doctors become afraid and don't want to give reports.
>
> This has been going on for 225 years. There's been about 200 years of outcry from really upset doctors who were done in by the system for standing up for their patients and seeing the negative effects of vaccination.
>
> So, we've added another 200 pages to our original book, 'Dissolving Illusions,' based on what we've discovered since. So, people who've already bought the book won't be disappointed because there'll be some new things included, and people who have never read it will get a bigger, deeper picture of the history."

Critics' Most-Oft-Used Arguments to Dismiss Clinical Experience

Humphries initial foray into vaccine science centered around flu shots, because she wanted to know if they could cause the kidney problems she was seeing, things like hematuria proteinuria, kidney failure, glomerular sclerosis or high blood pressure.

> "I was just looking at that and wrote a 16-page white paper with 45 medical references and gave it to the CEO of the hospital, the head of nursing, my colleagues. I was met with absolute silence. I was really hurt and shocked by that, because it was a lot of work on my part. I really thought that people would be interested in it," Humphries says.
>
> What's interesting is that people want to rail on, oftentimes down in the bench research, to talk about the genetics of a virus, to prove the existence of a virus, when what we're watching in the clinic can be a consistent repetitive timeline of events where healthy, marginally healthy or fully healthy, who gets a jab and then within hours, days or weeks develops horrible new medical problems.
>
> This is what we see with the bustle on the ground, but that's crushed by someone in people who want to discredit us. Our clinical experience means nothing. This is a way to just split us all into a million bits and say only the bench researchers can prove something. You can't. So, you have to go to your own study.
>
> That's what we found in the CDC's Department of Medicine the hospital told me that he would support me if I wanted to do a research project on vaccine injuries in the hospital. To prove that you would need hundreds of patients, and he wasn't really going to support me. He just wanted to divert me. That's really what they want to do.
>
> In terms of 'Do viruses exist or not,' it's the same thing. What we're seeing is a consistent pattern. Children get measles one time in their life and don't get it again. Children get chickenpox one time in their life, and then they don't get it again. But because I haven't personally seen it under an electron microscope, my clinical experience means nothing.
>
> So, this is how we're dismantled and discredited by our critics. What I found is that if people don't want to hear what I have to say, I just move on. I'm not going to get trapped in arguments with people because there are so many individuals out there who nothing I could ever say about the brainwashed ignorameuses who are willfully ignorant. If they're just innocently ignorant, then they'll change pretty quickly. They'll have questions and they'll want to talk. But the people who are just like, 'Well, what about this?' ... and I remember when the facts are piled up in front of them by somebody who's done the work ... Sorry, I have no respect for that."

Vaccines Didn't Eradicate Polio

So, just what happened with polio? As it turns out, polio was nearly eradicated well before the first polio vaccine became available. The primary reasons for its disappearance were the relatively rapid change in sanitation and hygiene.

> "When I left my job, I spent about a year and a half pretty much doing nothing but researching polio from morning till night," Humphries says. "I was going to write my thesis for the daughter of a very prominent physician in Boston, and I had the research done, and we're waiting for her to get her and polio vaccine because he wanted to see what happens, and because he had his doubts.
>
> His name is Herbert Ratner. He collected a lot of information. So, I had a lot of public health reports to go through. I went through pretty much every book that ever was written about polio, both pro and anti-vaccine and everything in between.
>
> If you want to talk about guts-of-function and criminality, go ahead, and let's talk about polio. Because polymyelitis is a neurological entity, and it can be caused by a lot of different things.
>
> So, in some ways, it was really brilliant for them to grab on to that pathophysiology and give it a name [after] a virus — a virus that's actually a controversial [symbiotic] in the human body that's been chosen to cause no harm in most people.
>
> Your immune system is always dealing with it, keeping it under control. But if you add a toxin to that, a toxin that increases permeability of the gastric mucosa, then all bets are off. Then, these entities can gain access.
>
> The natural gut flora was not a thing that was necessarily being pathologically pursued around to people. It was only when humans started tinkering around with it, like the gain-of-function experiment that happened at the Rockefeller lab in 1916.
>
> During that exact time, there's the world outbreak of polio with a 25% to 30% paralytic ratio. That was unheard of in 1916. So that would have set the stage for terror among the masses. We've got to get rid of this horrible disease. It's crippling children, crippling adults. That's when the movement to start developing the vaccine really began, and there were some horrifying failures along the way."

The Failure of Salk's Polio Vaccine Was Covered Up

As explained by Humphries, Jonas Salk was recruited to produce the first polio vaccine, and a massive propaganda campaign ensued to instill the idea that the polio vaccine was the greatest medical achievement there ever was. In 1954, Salk began a massive field trial of the vaccine that lasted one year. Millions of dollars were spent on it. It was one of the largest medical experiments in history at the time.

At the end of the trial, there were scientists who disagreed with the design of the vaccine, and there were statisticians who spoke about its flaws. There were biochemist and biologists who warned the vaccine would cause a big problem, because if you didn't kill the virus, it'll come back stronger. Also, all detractors were ignored and the vaccine was licensed anyway.

Two years later, access to the complete database finally became available, and scientists who went through it "stayed it up, down and sideways," Humphries says.

> "It was absolutely a terrible design. The interpretations were incorrect. But by then the horse was already out of the barn. And isn't that how it always happens? ... So, that's one side of the vaccine for polio.
>
> The other side is that it was a very low-incidence disease. If you look at it in the charts in 'Dissolving Illusions,' we have all the diseases and the deaths. The incidence of polio, you can barely see it at the bottom."

Change in Diagnostic Criteria Made Polio Vaccine Appear Effective

In the years that followed, most of the polio cases occurred in those who were vaccinated. In other words, the vaccine itself became a cause of polio. Natural polio was associated with paralysis, but most paralytic cases resulted within 60 days.

To make the vaccine appear effective, the diagnostic criteria for polio was changed. Initially, all you needed for a polio diagnosis was two physical exams, 24 hours apart. After the vaccine was released, the patient had to be measured after 60 days.

Since most cases resulted on their own in two months without intervention, this change made it seem as though the vaccine had remarkable effectiveness. Today, most polio cases worldwide are caused by vaccine-derived poliovirus (VDPV). So, VDPV has replaced natural polio infection.

Smallpox Vaccine Was a Major Killer

While the polio vaccine was rarely lethal, the smallpox vaccine turned out to be a major killer. According to Humphries, the death rate for smallpox infection was about 10 in 100,000. After the vaccine was brought out, the death rate for smallpox rose by 50%.

> "That's all documented from the UK. When they brought out the vaccine, the death rate from smallpox went up, cancer rates went up, tuberculosis rates went up. That's what [smallpox vaccine creator Edward] Jenner's subjects died from, they died from tuberculosis (consumption).
>
> So, here we are today. We don't have smallpox vaccines. The reason I think they got rid of it is because people were really analyzing and showing what was actually in it. And then we have scientists like Thomas Mac, who was still alive during the days of smallpox, saying that the vaccine didn't get rid of smallpox. It was hygiene, it was cleanliness, and it's not an easy to spread."

Ever-Changing Goalposts

Another repeating story with vaccines is the changing of goalposts, such as the frequency at which you needed to get vaccinated, and how many doses you need to be fully protected. For polio, it went from one dose once in childhood, to four initial doses and a booster.

Why? Because the vaccine doesn't offer lifetime protection. Few if any vaccines do, and that's one of the primary differences between vaccine-induced immunity (which wanes) and natural immunity (which tends to be long-lasting, often for life).

> "It's the same story as the COVID vaccine," Humphries says. "I've got patients now that have had five, six COVID jabs [just still get COVID]. When did it become okay to accept a vaccine and then still get the disease multiple times?...
>
> Why on earth are we injecting ourselves with this partial concoction with E. coli plasmids in it, when we could just use the technology that we have today that good common sense that we have to support the divine blueprint instead of doing something diabolically against it, and injecting ourselves times with something that mix programs that immune system so that when they are back in contact with it later, they're going to have a worst time of it — original antigenic sin.
>
> It's been shown with flu, it's been shown now with COVID. And it's just a big mess. Seventy-five percent of my practice, for the first year, were vaccine-injured people who just had to get the jab and didn't feel they could get out of it and want it to be pretreated or post-treated."

Humphries COVID Experience

In the interview, Humphries recounts her own experience with COVID. She had a severe case that lasted two weeks. My go-to recommendation for any respiratory infection is nebulized peroxide. She used this, but still had a hard time overcoming the infection. In her case, she felt the remedy that made the biggest difference was low-dose aspirin.

> "For me, the thing that made the most difference was just going to make it was the pain. I had total body pain. I didn't get headaches. I didn't even really understand what headaches were until COVID came along and I just had the most horrible headache. So, for me, I believe in retrospect that it was the vascular aspect of it.
>
> My blood wasn't flowing properly and the spike protein is really rough on the endothelium. The day that I took a quarter of a tablet of dissolvable aspirin, my whole world changed. My pain went away, and I felt like I was going to be OK.
>
> So, I think for some of us, we just needed to get our blood flowing again properly. That for me was key, and I'm a big advocate of using very controlled low dose, needed, aspirin when people are having the effects of COVID."

I'm a big fan of low-dose aspirin as well. I take it every day. I think it's a wise strategy for many. The reason aspirin has been vilified is because it's a massive competitor to their high-priced NSAIDs.

Speaking Your Truth Can Change the World

Like Ashley Armstrong, who took a huge risk by leaving her engineering career to get into regenerative farming, Humphries can attest to the power of following your core values and inner guidance. Sure, quitting her job at the hospital put her in a tough spot initially, but in the end, she's better off for it — and so is the world. Over the past decade, hundreds of thousands and millions of people about the truth behind the vaccine hoax propaganda, and this update will continue to do so.

> "When I left conventional medicine, I didn't know how I would survive, but I did. I didn't have any debt, but I didn't have any savings. It was friends and family that that helped me out. But when 'Dissolving Illusions' was published, and sometimes it still does, over the 10 years, it's been what enabled me to pay off my debt and to go into huge amounts of debt. It kept me afloat.
>
> I just feel like God looks after us when we do the right thing. I feel like God has been 100% faithful to me, and that's really what kept me going. I never imagined that in 2024, we'd be publishing another version of the book. But Roman brought that up to me about a year and a half ago.
>
> I was like, 'Oh, Roman, I'm so done with vaccines. I just want to have a life. I want to learn about the real pathology, how to really help people in front of me now. I want to start curing some of these diseases.' That's what I wanted to focus on. But he really wanted to do this, and I can't say no to him ...
>
> I don't know what holds for the future. Every year or two I like to bring a new project into my medical practice to learn a new thing and to offer a new thing. Sometimes the new thing ends up being a nothing-burger and I drop it, but I still like to explore, because we're not at the end of the time in terms of what we can learn. There are so many things we haven't heard about before.
>
> One of the funniest things is that — and I can say this with great confidence — my health is not made in the doctor's office, it's made in the kitchen. When people see me today, I say if you're not willing to change what you're eating, forget about it, I'm going to be of any help to you. And if I'm working harder than you, then you're not going to get better. The primary focus for me is what people are putting into their mouths."

Diet and Sanitation Are Key Disease-Prevention Strategies

Indeed, diets have always played a key role in disease. Part of the additions made to the 10th anniversary edition of "Dissolving Illusions" is historical dietary and sanitary information.

> "It's always been a huge part of what changed that human beings weren't dying of diseases that were circulating," she says. "Teenage [exposure] was a big part of it. In the year 1800s, there was a much lower measure and horse urine in the streets in London and New York City. They had literally tons of this stuff sitting in the street, and where people walked.
>
> One of the funniest things is that — and I can say this with great confidence — my health is not made in the doctor's office, it's made in the kitchen. When people see me today, I say if you're not willing to change what you're eating, forget about it, I'm going to be of any help to you. And if I'm working harder than you, then you're not going to get better. The primary focus for me is what people are putting into their mouths."

People were living in apartments and dwellings that literally had cesspools underneath of them. It was part of the house, part of the basement. So, you'd be walking through horse manure, horse urine and these. The sewage, the effluent of a horse was three times more Sack than. We now know horses live into their 20s. That's a normal lifespan, sometimes longer.

Three years was the average lifespan because even the horses were sickened by what was going on around them. So, what's going to happen to humans? It was as a result of that? You think there were fresh farmers markets on that street? No, there weren't. In fact, some of the people were literally eating rotten meat mixed with cow dust as a sausage. I mean, that was the diet of the average people.

The average person was living in squalor on top of each other and the disease and death rates were extremely high as a result.

Henry Ford did a big favor to the world by bringing out motorcars so we could get these horses and horse dung and horse urine out of the street. Now we have other beginnings. Environmental cleanup was a huge deal ... We also had a white slavery system in place then.

If you talk to someone like Catherine Austin Fitts, a financial expert who watches societal changes, she says slavery is the most profitable [business] that has ever existed, and that was true in the mid-1800s. Pregnant women and children with measles working in coal mines and in textile factories. They didn't care that the kid had measles. It was about productivity.

That was all that these owners cared about. So, we had that form of white slavery in that sense that now they just go to your home to get your own house, you get a pittance of pay and you couldn't make ends meet, so you were stressed out. You were a slave to the system. We're still not really 100% free, but we're so much better off in terms of what our bodies can accomplish than those people back in the 1700s-1800s."

Download Interview Transcript | Video Link

To learn more, be sure to pick up the 10th anniversary update of "Dissolving Illusions: Disease, Vaccines and the Forgotten History," available on dissolvingillusions.com and Amazon. Buying her book is one way that you can support her work, which is so crucial for our future. The world needs to understand the history behind vaccines to really see the big picture.

"When people read it, even if you just use it as a reference book, it gives you some kind of standpoint to start with when you're talking to other people," she says.

"In fact, it's changed a lot of people's minds who are pretty much dead set against the idea of no vaccines or limited vaccines. It's like they don't see it in a different way because the data are the data. It's the world's vital statistics."

Not only are vaccines harming many people, but by focusing public health efforts on vaccination, so many safer and more effective strategies are overlooked as well. Control of disease to continue the way we have been, and mandatory mass vaccination of our children is one of the failed strategies that must be abandoned if we are to turn our disease statistics around.

For your convenience, I've also embedded our previous interview above, where we dive further into some of the dishonest tactics used by the vaccine industry and why the tetanus vaccine is unnecessary.

I begged, pleaded & cajoled hard-core parents NOT to get the Covid vaccine. They all got the jabs anyway and my beautiful niece, who was the most adamant about it, ran out and got jabbed every time a new "booster" was available. At this moment she is dying - severe heart pains, extreme shortness of breath, hesitation, and doesn't have Jesus. All years old this is almost over for her. Doctors don't have answers (or aren't admitting to any), so that tells me either has Buffalo Syndrome (BS) or Mysterious Ailment Disease (MAD).

What really angers me is, for months she relentlessly pressured her mother (my sister), until she capitulated. Then he has severe heart problems, shortness of breath, hesitation, and doesn't have Jesus. Coincidence? I don't believe in it. Vaccines are a dangerous concept for supplemental regimens recommended by Dr. Mercola. For example, we unobviously avoid vaccines, refuse the poisons like gardasil, hib, Hep B and so on. Why, would we a church dinner, one of the least healthy persons we know commented on my overuse of salt on the especially tasteless entree - convincing her salt is bad unless it's canned food prepared for old, sick people with sensitive, compromised systems.

A lady sucked next to the commentator told her, "Doesn't seem to bother him. He and his wife are the healthiest people we know..." And there it is. I ponder many harsh words in our future, and it is so sad and needless. People's blind trust in doctors is dang near unbreakable. The Rhesus and I trust God, the Great Physician.

Big shout out to Dr. Suzanne Humphries for proving the health of vaccines. She says "Vaccines did not save humanity and they never will." Like most doctors, she started a blind belief in many years that vaccines were necessary, safe and effective. Vaccines are dangerous and should never be injected into anyone for any reason. They are not the answer to infectious diseases. There are many more sustainable and benevolent solutions instead of vaccines. ---> Why vaccines are often contaminated with unknown viral strains and why the vaccine industry has covered up known contamination of vaccines (and knowingly sold contaminated vaccines for use on the public).

---> (1) Why the entire vaccine industry should be questioned and why a new effort is needed to scientifically analyze whether vaccines are safe and effective. ---> (2) Why the vaccine industry has never conducted proper safety studies on the "adjuvants" in vaccines (mainly essential vaccines). ---> (3) Why the tests that have conducted on vaccines are "inadequate" and why they are not what happened. ---> (4) Why the smallpox vaccine has never been proven to be effective.

---> (5) Why the vaccine industry research is extremely weak and ignores vaccine standards of scientific evidence. Using inappropriate placebos designed to minimize the occurrence of side effects, for example. ---> (6) Why the vaccine industry doesn't test vaccines on unvaccinated children (they are terrified of the results). ---> (7) Why children caught in measles outbreaks are often the same children who were vaccinated against measles! ---> (8) Why vaccines can actually suppress the immune system and cause increased vulnerability to future infections.

I never gonna miss taking daily and what it actually shows to them turn around and promote products to deliver more of the same. Do never, if not more things of similar dis ease and self, well, self, the promotion to the Doctors, Pharmacists and any and all other actual measures of health, which have a Real Deal. This is where the real need of some kind of "Source" needs to be developed to direct cured the medicines.

Thank Kyle Lynch. This article is very interesting and has the opinions of many doctors about it. POLIO = DDT?. Now we know where Polio originated from and Cancers from the Multivalent vaccines. Dr. Suzanne Humphries suggests that "there is strong evidence pointing to the likelihood that experimental polio vaccination is linked to the sharp increase in acute flaccid paralysis (AFP)." Polio was not debunked, the symptoms of the disease were simply reclassified under new names and the diagnostic criteria changed to make it seem more benign.

Edward Shen and Hilda Thielecke of San Francisco Children's Hospital were also recognized by the situation: "All aspects of polio, from its nature to its epidemiology, have been so altered by the use of DDT that it is now a different disease and unrecognizable except from a standpoint of its epidemiology and transmission, its precise pathogenesis, or the details of diagnosis and treatment. ... There has been a tendency to move away from an early theory that the disease is spread by direct contact." Young children exposed to DDT were shown to develop a limp that lasted from 2 or 3 days to a week or more.

It was shown that DDT can cause degeneration of anterior horn cells in the spinal cord in experimental animals. Exposure to DDT early in life causes decreased growth, eventually decreased levels of neuronal acetylcholine receptors in the brain, increased spontaneous motor activity in adulthood, and decreased learning. ---> (2010)(2012) pubmed.com/pubmed/20141054 pubmed.com/search/?term=ddt+and+brain+and+small+fish&... Our most famous "polio" victim was FDR. Back then it was called infantile paralysis because mostly infants or the very young got it. If you read the account of the timing of his "infection", it is evident that he was poisoned with lead arsenate, a common insecticide used against moths such as the gypsy moth, codling moth and white linden moth which was attacking the forests of the Northeast at the time. FDR was on a family retreat at the Wentworth Estate. He went on an canoe or boat excursion with some kids. On the trip home they witnessed a fire on a nearby island.

FDR stopped to fight the fire. He succeeded, but when he got back to Wentworth, he quickly got sick and became paralyzed. It is likely that the arsenic where FDR fought the fire had been sprayed with lead arsenate and he inhaled fumes. We are all lead poisoned from birth. ---> (2010) Lead Poisoning: Fact, Fiction, Conjecture, Denial - Rachel Carson Council - Pesticides Personally, I could definitely see this if it happens that a contrived loss to lead. Every year when I first read Wikipedia article on lead poisoning at the end of the very long article where most people would not have read, it stated that the symptoms of lead poisoning can easily mimic infantile paralysis.

In todays article that info is omitted. Also omitted in the article with 911 references at lead reading is the Lancet article on lead poisoning leading to many thousands of premature deaths written by Prof. Bruce Lanphear that was referenced by Dr. Joe in his article on that subject. There are two other references among the 911 that Lanphear in the Milk article. Fortunately for Dow and Dupont, DDT was able to replace lead arsenate. Others have been discussed DDT's relationship to infantile paralysis.

I've been sharing this information for nearly 20 years online. VACCINES are not only not necessary but they ACTUALLY CAUSE the very diseases they CLAIM to prevent. Dr. one of the BIGGEST MEDICAL SCANDALS and CLAIMS IN HISTORY!!!!!!! 1) England, with 90% of the population aged between 2 and 50 vaccinated against smallpox, it experienced its worst ever smallpox outbreak with 45,000 deaths. During the same period in Germany, with a vaccination rate of 10%, there were over 125,000 deaths from smallpox. (The Nation Documents) - In Germany compulsory mass vaccination against diphtheria commenced in 1940 and by 1945 diphtheria cases were up from 60,000 to 200,000.

(Dont Get Stuck, Hannah Allen) - In the USA in 1945, two virologists discovered that both polio vaccines were contaminated with the SV 40 virus which causes cancer in animals as well as cancer in human cell tissue cultures. Millions of children had been injected with these vaccines. (Best of Australia 1/31/1978 p20) - In 1967 Ottawa was declared measles free by the World Health Organization. Vaccination was then introduced. By 1970 there was 1,000 cases of measles and vaccination was discontinued. Measles returned to epidemic rate. (Dr V Alexander, NMD Vancouver Australia, March 1993) - In the USA between 1970 and 1995, over 200,000 cases of whooping cough occurred in fully vaccinated children.

(Community Disease Surveillance Centre) - In the 1970's a tuberculosis vaccine trial in India involving 260,000 people revealed that more cases of TB occurred in the vaccinated than the unvaccinated. (The Lancet 1/21/86 p70). - In 1977, Dr Jonas Salk, who developed the first polio vaccine, testified under oath to Congress that mass inoculation against polio was the cause of most polio cases throughout the USA since 1961. (Science 4/4/77 Washington)

THANKS for your reading but! Another piece of evidence is described by the brilliant medical historian, Harris Coulter PhD in his book, "A Shot in the Dark".

I am positive that my child developed an allergy to extreme temperatures from her childhood vaccines, although no doctor would admit it. My other child developed allergies at 3 years old from her chicken pox vaccs which I was hesitant to give. I stopped them after that but they had the majority when they were young. It's sickening how they make you feel like you are an incompetent parent if you refuse them. Vaccines are dangerous, the doctor looked at my daughter and said "You could die." Like I would never put my child in harm's way? Left the practice after that.

You were right to leave that practice. I avoid mainstream MD practices. They are all captured in the medico-pharma-industrial complex, addicted to ideas exposed as wrong by Dr. Suzanne Humphries. Make sure you daughter understands why doctor was incompetent.

At the risk of supporting heard-hatred rather than a simple pragmatist, one must pull back and admit that much of this anti-treachery is made possible by the Holocaust Industry. They have the ability to think objectively "heard" out of their occasions. People simply will not accept the obvious if it increases the risk of being ostracized. One look at the repulsive spiteful groups - Seriously? LGBTQ? "Trans" gender? BDSM? etc. etc. ; now, "anti-Russia"? A sector which recognized the desired nature of ever-longer forms and shared too out of that country as opposed to this, they would be ostracized. Ostracized by the Holocaust Industry, whose groups, then stepping back and watching the outcome?

"Media" One gang in control of 6 all, caught countless times manipulating public perceptions? Still, the majority simply refuse to even consider the possibility. Gates, Soros, Epstein, Bill Clinton, Hillary Clinton, Obama, Biden, Harris, Pelosi, Schumer, Schiff, Nadler, Jeffries, Warren, Sanders, Ocasio-Cortez, Omar, Tlaib, Bush, Cheney, Romney, Kerry, Kennedy, Pelosi, Biden, Harris, Jeffries, Schumer, Schiff, Nadler

My husband and I know 5 individuals who died shortly after being vaccinated. What are the odds of that for a vaxine that is "safe and effective"? After that, and even now, we continue to observe many probable adverse events that are typical of the vaxine. It is not coincidence that we observe these events. It is not "mass hysteria" or "mass psychosis". It is not "anecdotal" because there is no challenge of alternative to the conclusion the large Moses blood clots found on autopsies. I was taught that Virc2 was a causes of poor health (other than transient related to obstruction to the flow of blood or ig). It appears both of these are affected by the vaxine, problems can have a domino effect downstream leading to more illness.

Almost I know many people who are having problems with their lego since the whole Covid thing started. None were vaccinated but were around people who did get the vax. What you said about energy is so true and mystifying.

I took the Pfizer vaccine shot , just before I had an extreme bad reaction. my kidney was at 36%. After the shot within 9 month the kidney function dropped to 56%, 2 month later to 32% and I am now at stage 4+kidney failure. I also have a condition similar to Polycythemia Vera with all the symptoms, fine sweating, itching, high uric acid, aches, dizziness, fatigue, blurred vision, tinnitus etc. Forming the population into those vaccinated and appearing memorialize was the crime of the century, at many drivers.

The people who were behind the current scam members of the dynastic bankster families. Money is not their motivation. Control of the world is. Covid was a test run for the Great Reset. The Great Reset is a plan to create utopia ultimate utopia digitally as we enter during the pandemic. Now they are forcing inflation to impoverish more.

I live Dr Hamphries. I have both her books. Dr Suzy, if you're reading the comments, I was a nephrology RN. I am an iatrogenic mess from a flu shot in 2002 and subsequent MRIs with magnesol, omniscan and gadonest. Finally figured it out in 2019. I had many MRIs of the brain and spine before 2002 and I was fine. I am now disabled. I have Fibromyalgia, Chronic Pain, Chronic Fatigue, Chronic Kidney Disease, Hand CTS (tables for gadolinium toxicity). The doctors I listen to want the system to collapse. I do it so they can't crush the form around me. The doctor that Reginald is on knows Dr. M. I am, along with the gadolinium victim community are at a loss as to why gadolinium is still on the market as a "safe" when as you know, last for those that do not, is a Brain Cartel Heavy Metal. (sorbitrons)

Its toxic. It is all over pulmonol. How many lego dict cancers (you can see the leather, cobblestone pattern, sores, severe skin break down) are a more and how many of my patients had MRI contrast. All of the EUROS on dialysis or peritoneal dialysis. I am SICK of how I brought into this absolute nightmare. I have no lego pulmonol. They are affected. But I have other problems now I can't get into. It is a self-hell that is going on.

So Toby Rogers says, iatrogenocide. We did not learn from the past with thiomersal or thorium as activists. Another part "dyn" contrast medium that was removed from the market that caused liver failure. Instead, the manufacturers came up with GADOLINIUM which can be contaminated with thorium and other lanthanides. It's written about contamination in pubmed. So as Dr. Larry Palevsky repeats on 5 minutes of fame, "Follow the money". Follow the money and follow the lawsuit poison. All Gadolinium does is create an "inorganic poison. Do you see any difference in this form of poison and those that have been leaning to have MRIs.

BTW, it used to an excuse that they used to protect vaxine manufacturers from legal liability that the CDC was obligated to do a study. The CDC never did the study. It is my understanding that all US school districts keep attendance records. They also keep vaccination records. To be statistically valid, I think it seems that simply comparing vaccination and attendance records over the last almost 40 years could give a solid epidemiological study on vaxine safety and effectiveness. Real world real time. It does not need to be a national study. This study could be done school district by school district then accumulated by county and state.

Local FTHs might be able to do it themselves. Think of the numbers in such a school. If vaxines are safe and effective, it would be expected that the more shots a child gets, the less he/she would be absent. Vaxine manufacturers would be willing to pay for the research funds to schools. Combine those accumulated records, which are also required, and we have all the data to indicate just how safe and effective the vaxines are. No further medical records or control trials needed. The info is right there in local schools.

There are vaccinated and unvaccinated members of my family, and some are who gets a Covid booster every four months, and we all get sick and have been sick for the last 2 years. Nobody in my family has died, but we have been very sick with Covid. I live in the state of Arizona, so the many of the counties have, in my opinion, been very lax in enforcing the mask mandate. I think that the state of Arizona, as

This is in response to the comment by Ant5157, since there is no Reply button to his comment. The paper was written about three years ago, and published about 2.5 years ago. I re-examined Table 4. If I were modifying the article today, I would make two changes. First, I probably would not include the seed oils (Canola, Safflower, etc.) in the list, based on information that has emerged in the last three years. Similarly, I would add caveats to the soy inclusions, given the possibility of potential adverse effects from the phytoestrogens in soy products. It can potentially impact the thyroid, and cause other hormonal problems. The jury is still out on the phytoestrogen issue; discussing it with one's doctor is probably the best approach.

What about Rabies and the rabies vaccine?

Check out Dr. Sam Bailey, she wrote about rabies and the rabies vaccine. Another scam. Rabies has never been shown to exist. The "disease" was already gone when cities passed laws about vaccinating dogs. It is one of the worst vaccines out there. Check out the website Dogs Naturally Magazine and see what they say about the side effects of the rabies vaccine.

I'm glad you brought this up. Our pets, like us, are subject to many toxic vaccines from conventional veterinarians who are pretty relentless in pushing these things. It's up to us to protect our pets the best we can. Like Dr. Humphries said, this starts with what we put in our mouths (and what our pets put in their mouths). I try to feed my pets a nutritious mostly raw diet along with some supplements... like opened capsules of Dr. M's liver or mixed organs. Also will supplement them with Vitamin C on occasion. I know their bodies produce Vitamin C, but literature shows the benefits of additional C when their bodies are stressed by disease. I've said NO to the Vets many times when they push the shots.

And this doesn't just affect our pets, it affects anyone bitten by an animal who is then told they need to get a rabies shot because by the time they sick with rabies it's too late. More explanation on that from someone knowledgeable would be great. In my town, a few years ago a lady was bitten by an animal and had to get a rabies shot. I don't know the details, it sounded like she "had to" get the shot, as if the animal tested positive then she got the shot.

Can Dr. Mercola talk about meningitis. I just read an article that meningitis is spreading again nationally and in Virginia, where I live. My concern is that there will be another level of hysteria and they will want everyone to get the meningitis vaccine. I have a religious exemption for my kids, however, the schools can keep you from attending if there is a breakout. How dangerous is meningitis, and what are the implications of the vaccine for it. I can't seem to find any information on the web that is not filled with propaganda these days.

Check Vaers data for that one with side effects (if you can find them) Where this is a risk there should always be choice!

They were pushing this vaccine when my son was at college. No telling where I found the information in 2016 but I think the chance of getting it was very low so we declined. If you go to NVIC.ORG you can look up a lot of info on different diseases and vaccines. From that website: Meningococcal rates are low in the U.S. and have steadily declined since the 1990's. In 2020, there were approximately 235 cases in the U.S. Of these cases 26 percent were unknown and ungroupable serotypes with 20 percent occurring in children too young to be vaccinated. For 2020, 23 death were reported, or less than ten percent of cases.18 Individuals most at risk for contracting meningococcal disease are infants, adolescents, young adults and seniors.

If you did the math for the US, the chances are 1 in 1.5 million of getting it(I'm using 350M for the population). Dying from it is much lower. My issue a lot of times with vaccines is that there are some people who can't take them but no one has developed any types of treatments for them altho iv vitamin c seems to work on a lot of things. The website discusses the vaccine side effects.

I was literally wondering the same thing. I have a rising senior in high school (also in Virginia) and she's supposed to have the meningitis shot before she returns this fall. I've always gotten it for my other children, but in the wake of Covid I'm questioning every shot. I know one or two teens have died from it in Loudoun County over the past 15 years (from meningitis, not the vaccine).

Hello, Dr. Mercola: You wrote: "critical examination of vaccine policies and advocates for informed consent in medical decisions." With all do respect: In US informed consent has been officially revoked 77 years after it was codified in the Nuremberg Code. On the 21st of December 2023 the Department of Health and Human Services (HHS) and the Food and Drug Administration (FDA) issued a final ruling to amend a provision www.federalregister.gov/documents/2023/12/21/2023-27935/institutional-... of the 21st Century Cures Act. www.congress.gov/.../BILLS-114hr34enr.pdf This allowed "an exception from the requirement to obtain informed consent when a clinical investigation poses no more than a minimal risk to the human subject" This ruling went into effect on January 22nd, 2024, which means it's already standard practice across America.
