80+	64%	74%	36%	26%	31%	29 times (15-57)

Everybody over 18 will have lost 30 percent of their antibody immune capability for viruses and certain cancer deaths six months

30-39 year olds will have lost a 5x chronic. These people will then effectively have full blown immune deficiency syndrome and be dying from cancer in 5 years.

The same Vaccinated Study found that the vaccine also lowered the immune response in the blood of Covid-19 patients and increased their risk of severe illness.

So if you take a booster shot, these figures show you are giving yourself an even lower progressive form of acquired immunodeficiency syndrome after a couple of months of effectiveness.

Take a COVID-19 booster, by vaccination series...
