RADIATION PROTECTION—a subject that has been our focus for over 30 years!

- Why is protection against radiation imperative nowadays?
- What types of radiation are there and how does radiation affect our health?
- What symptoms are clear indications of the presence of geopathic burdens?

For over 30 years we have focussed with great intensity on the cause and effect relationship between radiation exposure and its effects on health. If even weak environmental influences affect the regeneration of the body and consequently its ability to fight disease, then the basis for health is significantly jeopardized. With the successful health recovery of patients as our goal, we developed our own technology and approach. **We treat the causes, not the symptoms!**

Your health is what matters!

Our focus is your long-term health. YOU are the priority... not quick sales of gadgets that don't work, or low

High performance technology

Our radiation protection is of the highest quality and is used world-wide on a daily basis. The same applies to our therapy

Knowledge needs to be acquired!

The GEOVITAL Academy is for all who are open to learning new approaches. For

performing products designed for marketing rather than to improve your health. Our Geobiologists are professionals and many of them, former patients. We know how you feel when electronic pollution (EMF) and radiation exposure is starting to affect your life, or you are searching for solutions to prevent it from doing so.

mattresses and neck support pillows. We have always been more focused on developing actual solutions for problems and this will never change. After all, when it comes to your health, the only thing you want is something that really works!

people who are critical and demand facts, you'll feel right at home with GEOVITAL!

Non-metal glass fibre and basalt rock reinforcement for concrete as EMF proof rebar

By Patrick van der Burght | 25.05.2018 | Categories: General, Building Geobiology, Electronic pollution, New built homes | Tags: grounding, magnetic field, rebar, reinforcement, concrete, composite mesh, BFRP, GFRP, Fibre Glass, stray current, concrete slab, basalt rock

Nobody should be using metal reinforcement in concrete anymore. Besides increased durability and lower cost, it can prevent hard to fix magnetic field issues due to stray current in the soil. Composite Basalt Rock and Glass Fibre reinforcement for concrete is the way to.

When health changes demand quick action

When it becomes a priority to act...

The modern era (It can't be called anything else.) is very exciting. One technology overtakes another ... kilobytes, megabytes and gigabytes have become part of everyday life. There are however, other things in this modern world of networking that are important. Let us not lose sight of the fact that age-old values are important and need to be safeguarded. One value we at Geovital endorse is the priority to strive for a healthier life; without this, nothing else is achievable.

Ultimately, good health provides the foundation for a happy life. So, when your 'health project' fails, **your professional as well as your private life can be affected**. The goal and the means of achieving it should be quite obvious. However, statistically the rising percentages of common chronic diseases shows a very different picture. This is because, instead of combating the actual causes, the trend globally is to treat the symptoms.

We at GEOVITAL do give **HEALTH the focus** it deserves by supporting the body's ability to regenerate far more optimally. How do we do this? In the area of 'radiation protection' we use evidence-based technology to protect against electronic pollution and natural environmental influences. Health is a priority that is worth fighting for.

For your family, your partner and of course, for you.

The Geobiological analysis – A Bedroom investigation

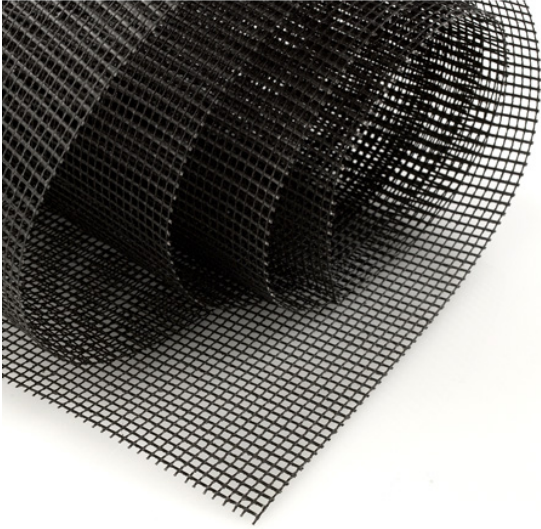

For a healthy life, besides having a healthy diet and adequate exercise, restful sleep is an absolute must. Everybody knows what it feels like when you have had a bad night's sleep. For more and more people this state of low energy and vitality has become an everyday norm.

Healthy sleep has been the main focus of the Academy for over 30 years. Modern environmental health burdens (electromog/EMF) and natural environmental influences can strongly affect the regenerative capabilities of our bodies during sleep. We have developed technology and materials that can be integrated into homes to provide functional protection for the bedroom. This has had an impressive positive impact on the health of our patients and clients.

The basis of any changes to be made to sleeping and living areas is the GEOVITAL geobiological investigation. Only when it is discovered which factors are contributing, can a targeted and effective approach be implemented. Without factual evidence, any approach would often only generate an expense and the chance of success would be doubtful.

We are working to support health every day!

Development of effective solutions

All of our product development arose out of necessity. We were searching for long-term health solutions for patients and clients, more so than something to sell. This is in sharp contrast to most of our competition. It seems to focus more on quick sales than long-term health benefits, with the motivation being to cash in on the justifiable fear people have of radiation. The majority of our products provide technical protection against electrosmog (EMFs and HF) and natural radiation from the earth. Additionally, we have developed a therapeutic bed system designed to avoid so many of the health burdens found in other mattresses. It provides wonderful support for back pain sufferers and optimises our approach to create the healthiest bedroom environment for restful sleep.

Radiation-free building – Sheer Genius when possible!

There are two options when considering radiation protection. You can do it when it should be done (early and preventatively), or you can do it when the costs are higher. Ideally, your active radiation protection can be integrated into your home as it is being built. The advantage of this is that the cost of shielding material stays the same but the cost of labour is effectively less as you were going to pay for the labour to construct the home anyway. If the property is already completed, then implementing protection should be considered an 'update' or renovation to the home. This should not be looked upon as an expense, but rather, an additional investment in your home, your health and your happiness!

Our customers and former patients speak their mind

I am loving my Theravital mattress thank you!!! It is super comfy and I am enjoying some good (much needed) sleeps. The kids seem to be doing well on theirs as well. I have previously used a Viscose -elastic (?) mattress which also moulds to your body but it was very hot in the summer however I have not had the same problem with this one. It allows a lot more air to circulate.

Sheelin, Queensland, Australia

Since using his new bed, Rob has been able to sleep properly for the first time and actually feels better after lying down through the night. With his medical condition he was struggling to get relief for his spine and with his new bed, he is getting support and also comfort. He noticed the stretching sensation when lying down and while it felt different to begin with he still slept well waking with less pain. He is now able to cope with his busy hockey schedule and will be representing Australia later this year in France. Thank you from a very happy family and customer for a wonderful bed that really works.

Fiona Summons

We had been looking for some time for a new mattress, when this one was recommended to us. We have found it to be extremely comfortable and supportive, neither too soft or too hard, too hot or too cold. We both sleep sounder with this mattress.

Family Pace, Pakenham

Learn and experience Geobiology in the GEOVITAL Academy

What Geobiology is

Geobiology investigates home health with a focus on the analysis of radiation exposure from both man-made (electronic pollution or EMF) and natural sources (geopathic stress). The training of geobiologists includes a significant amount of theory as well as much practical work. Geobiology investigates intensely the different types of radiation, their effects on health and how to

Electrobiology and Geopathy

As a student in biology class, you have already learned how the human body works. Our entire biological system depends on the transmission of signals between the brain and the cells by means of direct current (DC). The required electricity is produced in the body's cells. If this electricity supply wains or the signal transmission is disturbed, cell communication is affected

address these issues for long-term benefit.

For most of the participants, many previously unanswered questions are answered as the relationship between the environment and its influences becomes clear. Not without reason, more and more therapists and medical practitioners are attending our training.

and this flows on to our immune system, cell replication, reproduction, etc.

Modern environmental pollution, especially the electromagnetic radiation from transmitters and electrical power supplies, represents a considerable burden acting relentlessly on our bodies. In our professional seminars you will gain insight into how this ongoing radiation exposure impacts human electrobiology.

UPCOMING EVENTS

UK – Geobiology & Radiation Protection workshop

August 14 @ 09:30 - August 17 @ 15:30

English in Austria – Extra dates: Geobiology & Radiation Protection workshop

August 28 @ 09:00 - September 1 @ 16:00

English in Austria – Full: Geobiology & Radiation Protection workshop

September 3 @ 09:00 - September 7 @ 16:00
