 Great article and gives hope. However, I have heard (somewhere) that our government (Durbin from Chi) is on the prowl to restrict holistic, natural cures, including vitamins - and NATTO.

 Nattokinase is powerful medicine, so this is probably not as simple as "more is better." Is there a way to assess personal risk factors and set an appropriate dose? How do I know the right dose for me? I've never taken any kind of C19 vax, but am exposed to spike-shedding friends.

 My daughter of 50 suffered a venal blood clot in her eye which has resulted in permanent damage. The doctor put her on anti clotting meds but now we live in fear of a fall from a horse or a trip on the pavement or an incident with the bike. Can you take Nattokinase on top anti coagulant or replace it? Would it proffer the same risk of internal bleed?

 Excellent news! Can this be translated to mg needed for an effective dose? I know you recommend 200mg daily. Is that a similar dosage to this study? Thanks

 This is very encouraging. Perhaps it can become the standard of care to replace statins.

 I doubt if the govt will restrict vitamins if Agent 131711 (sub stack) is correct? He and others have stated that Vitamin D3 is rat poison! If they want us dead, they might keep promoting its use along with other supplements made from GMO corn etc. Rumor has it that vaccines could be added to foods like lettuce? Would they require labels ? It was a long battle to get GMO labeling!
