Home / Products / Electronic pollution / Shielding fabric NOVA

NOVA, ideal as curtains, partitions or canopies

NOVA was developed to be an effective countermeasure against high frequency radiation and also be effective at the 'higher' high frequencies where other fabrics give up.

GEOVITAL

living environment.

threads have been coated with silver for optimal compatibility. To reduce the electrical conductivity and prevent oxidation of the metal filament, it is cocooned with PU-coated polyester fibres.

How close is too close when living near transmissior power lines

- Shielding effectiveness: 35-43dB at 0-8 Ghz!
- Colour: White
- Material: 83% Polyester, 16% copper, 1% silver
- Weight: 75 g/m² or 2.2oz/yd²
- Dimensional stability: +/- 1%

Yarn

Silver plated and PU painted ultra thin 0.02mm copper thread cocooned in polyester.

Grounding

The metal component can not be contacted and therefor can not be grounded. Low frequency electric field must be reduced by additional measures. We recommend the use of Circuit cut-off switches or the placement of Geovital shielding paint T98 Alpha or Shielding mesh GPA.

Shielding effectiveness

The shielding effectiveness was measured by the University of the German Armed Forces in Munich to the MIL-Standard 285, IEEE STD 299-1997, VG-Standard 95 370-15, KS03 and confirmed in a report. (See below)

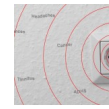

Care instructions
