

80-90% Miscarriage Rate for Pfizer's Covid Vaccine – CDC forced to issue major correction

From [Lifesite News](#):

“Initially the study was published with Table 4 showing “Spontaneous Abortion” after vaccination. The authors claimed that 104 pregnancy losses divided by 827 pregnancies resulted in 12.6% pregnancy loss rate, which is within a normal range. However, as Deanna McLeod, a professional cancer data analyst from Kaleidoscope Strategic Inc. in Toronto, and her colleagues pointed out in a [letter to the NEJM](#), in the tiny print below the table was a statement that a “total of 700 participants received their first eligible dose in the third trimester.” Since the definition of spontaneous abortion pertains to pregnancy loss under 20 weeks gestation, that meant 700 women didn't belong in the denominator because when they were vaccinated, they were already past the point of being able to *have* a spontaneous abortion. So, properly read, the fraction changed from 104/827 to 104/127 (81.9%). Hence, an 82% pregnancy loss rate for the first trimester pregnancies.”

“The CDC experts wrote a [correction](#) but the New England Journal of Medicine actually just erased the faulty denominator from the original publication and kept all the same conclusions.”

It's called “gaslighting.”

I can't get my head around the enormity of the crime committed on our persons! Thank goodness the Global South couldn't afford the jab or it would have been even worse! Every last one of them 'experts' included, need a Nuremburg-type trial before the world's population.

This is a Thalidomide Moment!
