**Electricity has shaped the modern world. But how has it affected our health and environment?**

Over the last 220 years, society has evolved a universal belief that electricity is 'safe' for humanity and the planet. Scientist and journalist Arthur Firstenberg disrupts this conviction by telling the story of electricity in a way it has never been told before—from an environmental point of view—by detailing the effects that this fundamental societal

From the Publisher

#### From the introduction

"We live today with a number of devastating diseases that do not belong here, whose origin we do not know, whose presence we take for granted and no longer question. What it feels like to be without them is a state of vitality that we have completely forgotten. . . . These are the diseases of civilization, that we have also inflicted on our animal and plant neighbors, diseases that we live with because of a refusal to recognize the force that we have harnessed for what it is. The 60-cycle current in our house wiring, the ultrasonic frequencies in our computers, the radio waves in our televisions, the microwaves in our cell phones, these are only distortions of the invisible rainbow that runs through our veins and makes us alive. But we have forgotten.

It is time that we remember.

#### Inside You'll Find

- A deep scientific history of electricity
- Information on the damage that human-created electrical devices have caused
- Information on the links between EMF and diseases like diabetes, cardiovascular disease & tinnitus
- Research showing the loss of over 2.9 billion birds in the last few decades
- The consequences of electrosmog
- The effects the planned 5G rollout will have on us all

## Editorial Reviews

### Review

"Few individuals today are able to grasp the entirety of a scientific subject and present it in a highly engaging manner, in plain English, without losing any of the details. In *The Invisible Rainbow*, Firstenberg has done just that with one of the most pressing but neglected problems of our technological age. This book, which as a medical doctor I found hard to put down, explores the relationship between electricity and life from beginning to end: from the early eighteenth century to today, and from the point of view of the physician, the physicist, and the average person in the street. Firstenberg makes a compelling case that the major diseases of civilization—heart disease, diabetes, and cancer—are in large part related to the pollution of our world by electricity."—**Bradley Johnson, MD, Amen Clinic, San Francisco**

"*The Invisible Rainbow* is wonderful. Firstenberg has done his research thoroughly. His book is easily readable and provocative while being entertaining. A remarkable contribution."—**David O. Carpenter, MD, director, Institute for Health and the Environment, School of Public Health, State University of New York at Albany**

"I found it to be a mystery unfolding and could not put it down. It shines a new light on diseases that come from electrical development, and addresses current environmental crises that only a few yet realize are the consequence of electrosmog. This book is very, very important."—**Sandy Ross, PhD, president, Health and Habitat, Inc.**

"I was stunned by this book. It is an extremely valuable document about an increasingly widespread environmental health risk to which we are all exposed. I am overwhelmed with admiration for what Firstenberg has accomplished."—**William E. Morton, MD, DrPH, professor emeritus, Oregon Health Sciences University**

"Firstenberg is a pioneer in the sense that Rachel Carson was a pioneer."—**Chellis Glendinning, PhD, author of *When Technology Wounds***

## About the Author

Arthur Firstenberg is a scientist and journalist who is at the forefront of a global movement to tear down the taboo surrounding this subject. After graduating Phi Beta Kappa from Cornell University with a degree in mathematics, he attended the University of California, Irvine School of Medicine from 1978 to 1982. Injury by X-ray overdose cut short his medical career. For the past thirty-eight years he has been a researcher, consultant, and lecturer on the health and environmental effects of electromagnetic radiation, as well as a practitioner of several healing arts.

#### Most important book of this time

Reviewed in the United States on March 17, 2020

Verified Purchase

This book is incredible, and I cannot stop recommending it. I have a saying, "The universe rewards the curious", and I believe that this book arrived just in time to appease my curiosity on the link between 5g and the coronavirus.

It is hard for many people to imagine that frequencies can negatively affect the human body, especially at a non-thermal level, but over 10,000 studies have shown they "do".

The book points out that historically, flu outbreaks would occur every 50 years in correlation with peaks in solar magnetic activity. After electricity became mainstream in the late 1880's, outbreaks started to occur annually and have done so since.

Even astronauts can't get a break, as 50-60% come down with herpes due to background cosmic radiation, which measures at 160ghz which is below thermal levels. Is coronavirus dormant in us, as herpes is by the time we are 20, and some how activated by 5g?

This book will open your eyes to the fact that we, and all of life around us, ARE affected by frequency, and if we don't clean up our environment of all this electrosmog, we are in big trouble.

This book is amazing piece of work with 139 page bibliography of doctors and scientists to back up there claims. This book is the real deal! You want to have that ah ha moment and realize that electricity is responsible for the majority of health ailments and you are just not being told the truth. In my opinion the truth is being suppressed so that big pharma can benefit of your ailments while they treat you with meds you don't need. Yes meds help to relieve your symptoms quicker but it doesn't address the cause of why you got it in the first place. Always treat the symptoms instead of trying to figure out why you got them in the first place! But it's not the doctors fault. The doctors are good people It's just the powers that be who disregarded the finding of the past and swept it under the rug. Then create new guidelines to treat diseases. Here is one for you. If your suffering from something take two saws and cut down a telecommunications pole! Ha ha just kidding. Peace and love to everyone even the people who bash this book. Knowledge is power!!

**A re-evaluation of the technology that has defined our modern world, from a health perspective.**

Reviewed in the United States on April 12, 2018

This is an amazing book. It is in my top 10 list of general interest non-fiction books that I've ever read. Arthur Firstenberg revisits the technologies of our day that have shaped our lives in the 19th, 20th and 21st centuries - from a health perspective. Telegraphy, electricity, radio, radar, satellites, and cell phones / wi-fi. When each of these technologies was introduced the "wow magic" and utility factors dazzled us, it also blinded most of us as to their other damaging effects - which happen over time - to both our physical body, mind, and our environment, animals and trees included. Undesirable health effects - chronic and temporary. Heart disease, chest pain, heart attacks, cancer, diabetes, obesity, and influenza (the flu) take center stage. But you will also learn about haemophilia, strokes, hair loss, auto-immune diseases, and much more and how they relate to the modern technologies that surround us.

It's a classic case of fixing one problem and causing another, many others. (Pandora's box?).

In just a few hundred pages, Invisible Rainbow, will guide you through the history of these technologies and correlate how they each affected our health and environment - using broad population /
