**jacquelyn sauriol** Substack won't let me get rid o... Aug 29 ❤️ Liked by Ana Maria Mihalcea, MD, PhD

With the summer I have been looking alot at the condition of peoples skin and look of their tissues; I swear I can see it has changed, more ruddy looking throughout. As an herbalist, I have made and used food grade Witch Hazel and Willow tinctures for normal clots and blood health. But since these clots are so dense and non biological, it seems, I do wonder if there is anything that will address it. I also used Burdock Root Tea in great quantity to get through Covid itself from 11/19-2/2020. Burdock has quercitin and inulin and so it was very helpful for keeping my blood sugar up when my appetite was wonky. I felt like I had a cross between whooping cough and mono and lost 10% body wt which came back only very slowly. I have to hand it to them, perfect way to do up a genocide, so many different bits of virus, a relative smorgasbord you could say. Thanks for your very clear writing Dr. Ana- best from Oregon

How about chelating out the metals, the graphene materials? Have you a way to do that safely?

👍 2 Reply Collapse ...

**jacquelyn sauriol** Writes Substack won't let me get rid o... Aug 29

Thanks Lisa....probably the answer is lots of green leafy vegetables...thats always an answer....more cabbage...yes. Oh, cabbage I love thee.

Thanks, Jacquelyn. I have discovered that both a magnet and a metal stick to my body. I am not injected. I have been getting GO other ways. My guess is from chemtrails. We eat only organically grown food and filter/distill our water. Will read the links you provided, as natural chelation is going to be more and more important and a way of life.

**jacquelyn sauriol** Writes Substack won't let me get rid o... Aug 30

Whoa, just you saying that made me try it...I need to go get some rare earth magnets there used to be a wierd little magnet store in the area, will see...or just hardware...so, re the magnetism, any specifics? I did test fridge magnets to meat at Safeway (not to buy!!)

but the meat seemed ok. Then learned one has to use rare earth (stronger?) magnets...so...

dang. ps ? getting GO? i do not understand unless you mean getting busy...?

**jacquelyn sauriol** Writes Substack won't let me get rid o... Aug 30

Ah thanks Cairn N e c (hey thats funny!) maybe there already is one (herbal site on SS)? I saw that IPAK ? has an herb class too...I think a laypersons/citygirls herbal page would be a goal, most important is what grows near you that can be safely harvested, or grown. Ah, you have spurred my 3 brain cells, hear them rubbing together...squeek...it would perhaps be connected to a wine making for the pagan page, and by needs have a chemtrail page. Hmm. Maybe I should get some breakfast first! The dog definitely thinks so...best

**Cairn - Not eating cockroaches** Aug 30

And a dog page.

👍 Reply Collapse ...

**jacquelyn sauriol** Writes Substack won't let me get rid o... Aug 30

I have a friend who has a dog inspired political page, its kinda a hoot and maybe you have seen...<https://jaancarter.substack.com/>

I did find a good few herbal pages but most are newish and not a ton on content yet.

the reason i held off months ago was the issue of a dr eric t o p a l who is still spouting pro vax stuff even now, i did nt want to be associated with him or anywhere that was willing to sponsor such a view. he is total shill for the bill, still. So I wait...i do not monitor his site here because that makes him money and i do not want to even remotely support him. I can be quite stubborn sometimes, mules in my family tree i suppose.

ps email me at my name all one word, @p.m.me if you like ok best

Dr Ana your article on darkfield finding particles in blood confirms what I have been seeing with my microscope. I have bright field and darkfield. I also see a lot of Roulough in blood samples. I had a hunch last year that unvaccinated but exposed to C19 in 2020 blood might look the same as a vaxed persons. I was prompted to get a good microscope last year and confirmed it! I'm seeing similar particles and parasites. I've sent your article to Think Tank members that I know. Thank you for the work you are doing!

Parasites, in the uninjected, how would that happen? Serious question.

👍 Reply Collapse ...

**Patti Kay Wooldridge RN BSN** Aug 30

Parasites can be acquired through multiple exposures to veggies not properly soaked and cleaned with peroxide in the soak water and by eating raw fish like Sushi and from pets licking the face. Parasite eggs are so small they can be carried on the wind in the dust from breakdown of animal feces that become powdered with time. Kids playing in the dirt a lot will put hands in mouth or pick their nose or even put dirt or stones in the mouth.

Pin worms are common in children for example. Most docs do not think of parasites in the USA because of our hygiene habits and often do not test for them.

We get a lot of food from foreign countries that may be grown with black or grey water or are heavily sprayed with chemicals and insecticides which don't get removed from the surface of plants and fruits. So the eggs get sealed unto the surface of them and need soaking longer..15 minutes with a product that will cut through the films and release the eggs. This is especially important for those who do juicing.

Thank you for your reply.

I had thought that you meant through association with the clotshotted.

But you have found the same sort of junk in the blood of both shot and unshot.

That's really significant.

👍 Reply Collapse ...

**Patti Kay Wooldridge RN BSN** Aug 31

What I didn't mention is that the unjabbed but who had exposure to C19 and later had antibodies was the blood that looked like the jabbed patients. Forgot to mention it.

**Cairn - Not eating cockroaches** Aug 31

I would think that your findings are important.

Suggest that you share them with other Substackers who study the blood.

Or try being more detailed here.

Another must read and listen Dr. Mihalcea. My research comes to pretty much same conclusions, so yours does: <https://expose-news.com/2022/08/29/covid-injections-contain-hydrogel-and-graphene-oxide/> and <https://tumble.com/y1h9piz-the-jab-its-poison-and-will-kill-you.html>

👍 Reply Collapse ...

**Dr. Gregory Pernoud** Aug 29

Thanks for the update as to the pathology related to blood S/P vaccine injections. The Brazilian Dr's have been on this from the beginning, doing analysis for the vaccines themselves. They were the first or at least some of the first to warn us of Graphene Oxide in the vaccines. Mike Adams, a food scientist is also doing chemical analysis of these self construction "clots". Everyone seems to agree on just what you described, as deadly structures being formed in the blood of the vaccinated. I would have to ask, is there any detox treatment known for this?

Spanish tv shows in general have been ahead on all this. La Quinta Columna has regular live stream tv shows w/ Chilean channels, Argentina and Bolivia.

See Orwell dot city archive section for transcripts of interviews etc. A lot of really good information.

Have you looked this up yet Ana?

What is considered elevated D-Dimer results? Is 50 elevated?

👍 Reply Collapse ...

**Ana Maria Mihalcea, MD, PhD** Aug 29 📌 Author

Different labs have different reference ranges. I would consider anything out of reference range elevated and the clinician needs to assess the risk profile. This is looking for microclotting, so I would not take into account age adjustments for pulmonary embolism criteria
