

Here's how the vaccine is causing those weird "blood clots"

I had a nice chat with Jessica Rose today on her Substack article about how the vaccine is causing your blood to perform unnatural acts.

Recently, Jessica Rose published a very long, but very important Substack article, "Is the spike protein acting as a prion with regard to hemoglobin molecules? And is porphyria being induced?"

The short answer is yes, it appears so, according to everything we know.

Here's a key paragraph from that article:

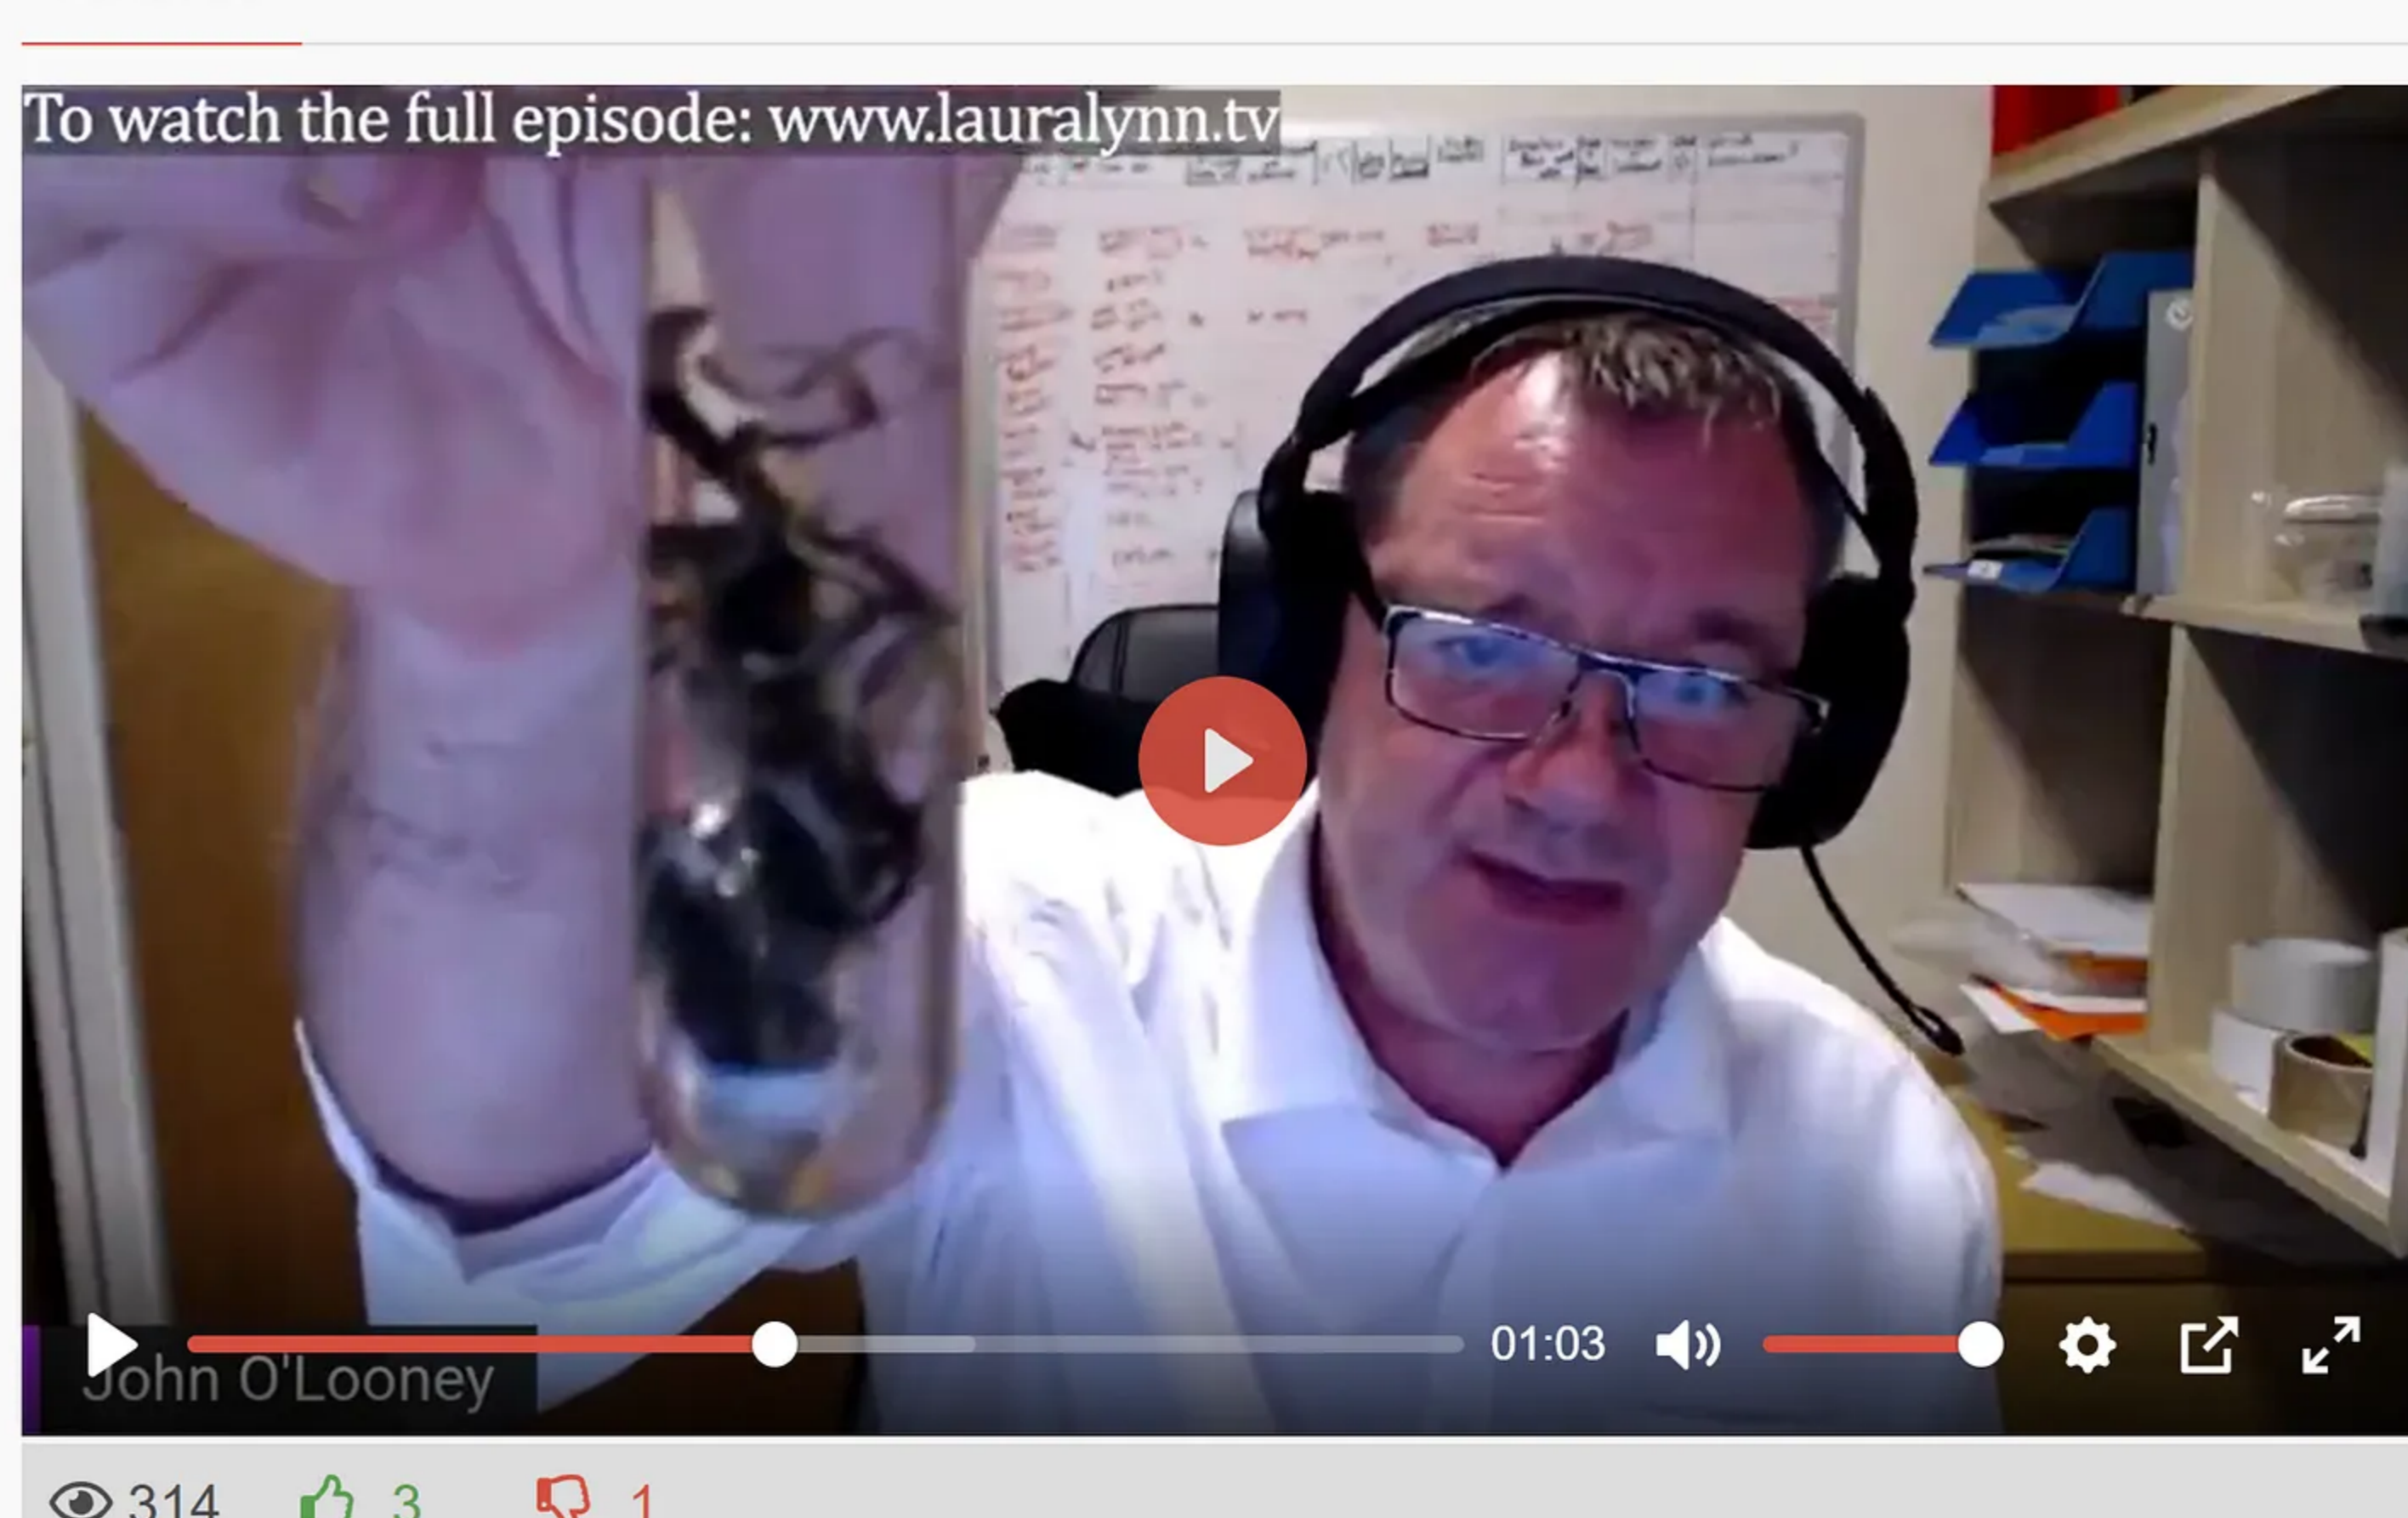

So the bottom line of all of this information is this: the virus infects the RBCs using spike protein via the CD147 receptor on red blood cells which causes hemolysis (rupture of the red blood cell). This causes the release of massive amounts of hemoglobin. Then the spike protein, due to its amyloidogenic peptides, triggers mis-folding of the hemoglobin into amyloid fibrils causing subsequent blood clots. The blood clots would be enhanced due to antibodies (Ag:Ab complexes).

These "rubbery" blood clots that are being pulled out of cadavers on a regular basis.

Watch this short video of John O'Looney explaining how these clots cause people to die.

FUNERAL DIRECTOR JOHN O'LOONEY DESCRIBES WHAT HE DISCOVERED WHILE PREPARING A DECEASED PERSON.

WATCH

What is remarkable is the medical examiner is completely missing this in their determination of the cause of death (which they leave unexplained). The embalmers find these clots. Most of them say nothing because they don't want to lose business.

The "clots" featured in these videos are not blood at all; they are primarily amyloid proteins (thanks to analysis done by Mike Adams of clots supplied by Richard Hirschman).

The virus itself can cause this to happen, but to a much much smaller extent than the vaccine (think miniscule). The vaccine has an advantage over the virus because, unlike the virus, it deposits the spike protein all over your body very quickly after injection thanks to the polyethylene glycol which coats the lipid nanoparticles.

So if you are wondering why you just lost someone to a stroke or heart attack after their latest jab, now you know. If they died shortly after the vaccine, it was probably the vaccine that created a clot that blocked blood flow to the brain or heart.

Why isn't the NIH funding a study looking at blood parameters before/after vaccination?

It's very telling that there isn't a single published study anywhere in the world that looks at d-dimer, troponin, and Heinz bodies both before and after vaccination.

There's a reason for that:

They don't want to know. It would immediately end the vaccine program worldwide.

However, if anyone reading this is interested in doing such a study, I'll happily fund it in a heartbeat. Use the [Contact me](#) form and be sure to check the study with the d-dimer radio button.

Steve I recall this video too of clots being removed from a deceased vaxxed.

My question is why aren't there more? No one I know personally had any trouble with the shot. I didn't take it but it would be a lot more believable if more people were having these reaction?
