interview by Celia Farber

by Jon Rappoport

February 18, 2020

(To join our email list, [click here.](#))

The question I've been asking since 1987—

If the experts are going to claim a particular virus causes a particular disease—how do they know that virus exists in the first place?

For example, the supposedly new coronavirus in China. For example, Ebola. For example, HIV. For example, the coronavirus supposedly causing SARS (2003). How do researchers know these viruses exist?

“Well, of course they know. They must.”

That is not a satisfactory answer—even though most

people would offer it.

The question can become very interesting, when you stop and consider researchers working away in biowar labs fiddling with viruses. How do they know they're tweaking viruses that actually exist?

On a more mundane frontier, when scientists tell us they're rushing to develop a vaccine against a virus that is harming the population, how do they know that virus exists to begin with?

I came to this question when I was researching HIV in 1987. I began to think about it seriously in 1990. During all these years, I've reached out to independent researchers, and I've tried to stitch together their answers. I can't say it's been a smooth trip.

But I have found some answers; and I have certainly found some fake

Archives

Select Month

mainstream assertions, which glitter like baubles on plastic branches of 99-cent store Xmas trees.

Here are a few clues. You need to take a tissue sample from a live human being. You need to filter that sample correctly so you arrive at a much smaller sample you believe might contain a virus. You need to put a drop of that sample under an electron microscope and observe what looks like a virus.

How much virus? How many identical particles of virus? Opinions differ on this. It could be one definite virus, one particle. It could be many, many identical particles.

Sidebar: If you're trying to prove this virus is actually causing DISEASE in a person, you have to go further. You have to show the very same virus is active and replicating at a very

high rate in the person's body, and his immune system isn't defeating it. Beyond noticing the patient is sick, how do you test for all THAT? I'm still looking for a definitive technical answer—if there is one.

All right, let's get back to the electron microscope. Let's say you've observed many identical particles of what looks like a virus in the electron microscope photograph, called an EM. You can then say, "Found it." But you need to be sure. You need to figure out that this virus isn't just something *that ordinarily lives in the human body* like a couch potato and does nothing—a passive *endogenous* virus. No. You want to show this virus *comes from the outside as an invader*—an *exogenous* virus. And how do you perfectly make that differentiation every time? Another question that might have no precise

formula as an answer.

Big question: CAN WE BE SURE ALL VIRUSES THAT ARE SAID TO EXIST AND SAID TO CAUSE EPIDEMICS ARE ACTUALLY FOUND AND OBSERVED AND IDENTIFIED ON ELECTRON MICROSCOPE PHOTOGRAPHS? CAN WE AT LEAST SAY THAT?

No.

In which case, the researchers have been, at least some of the time, up the creek without a paddle. They've jumped the gun. They've bolted out of the starting gate too soon. They've laid their money down on a horse that may not even be in the race. They've written a check no one can cash. They're talking about lockdowns and quarantines without having proved their favorite virus of the moment exists. Sure, people on the back

end will make big money from these unwarranted presumptions, but money is not science. It might control science, but it ISN'T science.

All right. I've now set the stage for an excerpt from an interview, a profound interview with a late mainstream master who, in the face of fake science, suddenly was characterized as a rebel, Etienne De Harven. The interview was conducted several years ago by the brilliant reporter, Celia Farber. You can find the whole interview [here](#). I strongly suggest you read it sixteen times. Yes, it gets technical. You'll also notice names of elite scientists you haven't run across. Learn the meaning of the words you've never seen before. Dig in. This isn't television-type brush-off conversation. This isn't a YouTube throwaway.

I have another reason for

exposing readers to this interview—it's what a conversation about serious scientific issues looks like... this is what trying to bridge the gap between researchers, honest reporters, and the public looks like. There should be hundreds and thousands of such print-interviews taking place, laid before readers. They can handle it. Dumbing down people is partly an illusion: they can wake up. They WILL wake up if they're sufficiently interested.

Etienne De Harven's background: president of the Electron Microscopy Society of America; researcher, Memorial Sloan-Kettering Cancer Center; Cornell professor of cell biology; professor of pathology, University of Toronto; recognized pioneer in the field of electron microscopy.

The interview focuses on

HIV; whether it was ever found and isolated. The implications and questions spread out to any and all viruses.

DE HARVEN: Unacceptably frustrated by the total lack of success in all attempts to demonstrate virus particles in human cancer by EM, the “impresarios” of the cancer/virus “dream” (Gallo, Fauci, and others) totally engaged in the molecular approach.

Consequently, they invented molecular markers to compensate for the missing viral particles...This would have been acceptable if the specificity of these new molecular markers would have been clearly established. Unfortunately, this was not the case. The most misleading molecular marker was probably the first one, i.e. the enzyme [called] reverse transcriptase (RT). Following Temin and

Baltimore 1970 papers in “Science”, the RT enzymatic activity has been, most abusively, used as a specific retroviral marker. Both Temin and Baltimore demonstrated RT activity in samples of supposedly “purified” retrovirus.

Embarrassingly, they both omitted to verify the “purity” of their samples by EM. Some of their samples were simply purchased from a commercial company... True, the label on the vials read “pure retrovirus”... However, it was known that these commercial “pure retrovirus” were heavily contaminated by cellular debris!

And since it is also known that all cells contain RT (see Varmus), cellular debris are most likely carrying similar RT enzymes.

Temin and Baltimore did not, therefore, prove that

RT is a specific molecular marker for retroviruses. It would have been so simple to check, by EM, the degree of “purity” of the samples they used. This would have, most probably, shown important cell debris contamination, and would have obliged Temin and Baltimore to be much more cautious in the interpretation of their results. In 1975, the members of the Nobel Committee, most regrettably, failed to scrutinize this “purity” problem...

In 1983, at Pasteur Institute in Paris, reliance on the RT marker was a key element in the claimed “isolation” of a new retrovirus [HIV]. Still, Montagnier himself recognized “We did not purify”... He dangerously omitted to consider the misleading interference of cell debris, just as Temin and Baltimore did in 1970.

But a paper on the discovery of a new retrovirus looks much better if it contains at least... one EM picture! So, members of Montagnier's team spent hours at the TEM [transmission electron microscope], looking at their mixed cell cultures, and they found the virus!

See Fig. 2 in their "historic" 1983 "Science" paper! It is, by the way, a good quality EM picture. It shows unquestionable retroviral particles, budding at the surface of a cell. But the legend of this Fig. 2 states that this cell is a cord blood lymphocyte. Indeed, cord blood lymphocytes were admixed to these complex cell cultures (why?)

Montagnier and his co-workers should have known that human embryonic tissues, and the placenta in particular, are very rich in endogenous retroviruses (HERVs), and that cord

blood lymphocytes should therefore be expected to carry the same endogenous retroviruses (under the TEM, endogenous and exogenous viruses, looking identical, cannot be distinguished.)

The budding of these particles has perhaps been stimulated by some of the growth factors also present in these cell cultures. An essential control would have been to repeat the experiment using lymphocytes from the peripheral blood instead of from cord blood. This control is unfortunately missing.

In short, I would frankly state that the Pasteur 1983 paper (whose 30th anniversary has just been celebrated in a “grand messe” of official HIV retrovirology!) contributed very little in AIDS research because its conclusion (i.e. “the isolation of a new

retrovirus”) is based on 1) the use of a non specific RT molecular marker, and 2) is falsely supported by EM pictures of, most probably, endogenous human retroviruses.

More details and appropriate references on this analysis can be found in my 2010 paper published in the Journal of American Physicians and Surgeons [— *“Human Endogenous Retroviruses and AIDS Research: Confusion, Consensus, or Science?”*] (jpands.org/vol15no3/deharven.pdf).

CELIA FARBER: When antibody and VL [viral load] tests became widespread as diagnostic tools for “HIV infection” over the ensuing decades, what happened with EM inside of HIV science and literature? It is my understanding that nobody has ever found HIV in human blood, on EM. Is this an accurate way to say it?

DE HARVEN: In my views, Western Blot [antibody] tests lost all credibility after the publication of Eleni Papadopulos's et al. (1993) paper, and antibody tests ("Elisa") [lost credibility] after Christine Johnson's report (1996). The notion of a "Viral load" (VL), however, brought a new parameter in AIDS diagnosis (Ho,1996). It called attention to the actual number of HIV particles supposedly present in the blood plasma of AIDS patients, PCR technologies [tests] being presumed to offer a way to quantify that number.

If such a viremia (i.e. presence of virus particles in the blood) is indeed present in AIDS patients, it reminisces the retroviral viremia well known in leukemic mice. In such case, retroviral particles should be readily demonstrable, by TEM, of appropriately prepared patient plasma

samples. Unfortunately, it has never been possible to demonstrate by TEM one single retroviral particle in the blood plasma of any AIDS patient, even if one selects patients presenting with a so-called “high viral load.”

I was apparently the first researcher to make that statement, during the opening session of President T. Mbeki’s major AIDS conference, in Pretoria, SA, in May 2000. My statement to that effect has never been refuted.

CELIA FARBER: How come?

DE HARVEN: That question must be answered because “something” is measured by PCR technologies in the blood of many AIDS patients. Actually, what is being measured is definitely not the number of retroviral particles (phantom-like, i.e.

EM invisible!). In fact, what is being PCR identified, amplified, and supposedly quantified is the number of genomic nucleotide sequences that are extremely similar to sequences known to be part of the retroviral genome. Most regrettably, these sequences were misinterpreted as an indication as a certain number of ... HIV particles! This did a lot to consolidate the quasi-religious dogma of HIV as the cause of AIDS, a dogma that has been sharply criticized, a few years ago, by David Rasnick who wrote, authoritatively, about "The AIDS Blunder"...

This interpretation would have been acceptable only if retroviral particles would have been readily demonstrated, by EM, in the blood plasma of these patients; but, since this is not the case, another explanation for the presence of these nucleotide

sequences has to be founded.

I presented at the RA conference in Oakland, CA, in 2009, and further developed in my 2010 JAPS paper such a much needed explanation for the presence of these retroviral-like nucleotide sequences. My explanation is based on the well known, variable amounts of circulating DNA in the blood of severely ill patients, and on the fact that we all carry [irrelevant] retroviral-like sequences in our DNA, as endogenous, defective retroviruses, i.e. HERVs (HERVs, for “Human endogenous retroviruses”) (See “Virus in all of us”, R. Lower at al., 1996 PNAS paper).

No surprise, therefore, that these nucleotide sequences are recognized by PCR [tests] in the blood of many AIDS patients, who are indeed severely ill. As already demonstrated in

2008 in Robin Weiss laboratory, HERVs can interfere as confounding factors in the search for novel retrovirus in chronic human diseases...

CELIA FARBER: ...Paint a picture for us. The story of the [HIV] virus, the “new deadly virus,” what happens first: What steps did they [—] Montagnier, on one hand, Gallo on the other [—] take to “find” the new entity? Then once they ‘found’ it, what shape was it in? It was not an entity, a thing, with a body, right? It was not coherent. Can we say that? So it lived where? It was seen only through the technologies developed to find it, Elisa, WB [both are antibody tests]? Later PCR/VL [tests]? But what happened back THEN when they tried to see it on EM? Why didn’t everybody look for it on EM? Too expensive?

DE HARVEN: No, EM is

not cheap but not that expensive! And its cost has certainly nothing to do with the fact that it has barely been used for the past 30 years in AIDS research! It has not been used because “They” knew it was not going to show anything of retroviral significance in samples coming directly from AIDS patients. And since AIDS had become big business, the stocks of involved giant pharmaceutical companies could not be jeopardized! It had to be saved at all cost, even at the cost of trusting non specific molecular markers... Fear is good business, and viruses generate fear most efficiently... So, the HIV flag has to be maximally agitated. In worldwide medias, with thousands of computer-generated, colorful caricatures of an idealistic retrovirus... By contrast, the medias have been dominated by the

most rigorous censorship when it comes to inform the public about views of rethinking dissidents. This total censorship put a safety lock on any information that could jeopardize the colossal, entirely HIV derived profits of the major pharmaceutical companies.

But I am glad we have Internet!

Daring to say that HIV does not exist amounts to some sort of a capitalistic crime...

Yes, the HIV dogma is probably the darkest page in the history of modern medicine.

CELIA FARBER: Etienne, if you could sum up: Does HIV exist? If so, where and how and as what?

If you could examine 1,000 HIV positive people's blood under EM, what would you expect to find? If you don't find HIV on EM in human blood, can any argument be

made that the virus is “hiding” and so forth, or that the drugs suppressed the virus to undetectable levels? This is what the defenders of the orthodoxy seem to be saying about the results seen in the Nushawn Williams case.

DE HARVEN: This is the main question! Questioning the very existence of HIV is not something that should be debated only between specialized retro-virologists. It is an essential question that concerns all of us.

CELIA FARBER: Why?

DE HARVEN: Simply because 100% of AIDS research funding is based on the dogmatically postulated existence of HIV. If HIV does not exist, it would follow that AIDS research is the most appalling case of total misappropriation of public research funds! And it would also follow that the

monumental amounts of money, so far exclusively devoted to HIV research, would be much better used in other directions. Could you imagine what world we would live in, today, if the total amount of money wasted over the past 30 years on HIV research had been, instead, used for feeding starving Africans, for clean water supply equipment, for public hygiene infrastructures, and for public health education? This would happen only if HIV research is totally stopped! And for this, the scientific and public health organizations have to face the fact that, indeed, HIV does not exist!

...we all have to, courageously, face the fact that the very existence of an exogenous HIV has never been scientifically verified.

—end of interview excerpt—

Again, you can read the

whole interview [here](#).

De Harven unmasking HIV research. How many other unproven viruses have likewise been prematurely massaged into existence and prominence? How many times have researchers pulled “special markers” like rabbits out of hats—spuriously claiming these markers establish the existence of otherwise never-observed viruses?

And therefore, when these researchers state they have published the genetic sequences of these viruses—what are they really sequencing? Harmless and passive endogenous viruses that wouldn't hurt a fly and prefer to lie around in the body for the whole course of a lifetime watching television?

And when someone steps forward, and claims a new and never-before-seen virus is actually a manmade

weapon, and he knows this from studying its genetic sequence—is he right, or is he looking at the sequence of an irrelevant microbe that has been rudely coaxed from its long languishing snooze in the warmth of the human body?

Jon, thanks. In future
coronavirus posts, you
might remind readers about
Keshan's disease, which
turned out to be a selenium
deficiency in Keshan's soil. I
read recently that AIDS is
caused by a deficiency in
selenium, glycine, cysteine
and glutamine. As Linus
Pauling stated, every
disease is the result of a
mineral deficiency (and I

would add, perhaps a vitamin deficiency).
Imagine if doctors tested for nutritional deficiencies before prescribing drugs that kill over 100K Americans per year and cause so much pain and suffering, not to mention the 100's of billions in drug costs!

Reply

Michael says: February 18, 2020 at 11:07 am

What makes it even worse is that Pharma drugs 'accidentally on purpose' deplete your body of vitamins and minerals and it really depletes your body of magnesium which i find very suspicious because a lot of people realize that magnesium does a LOT of thing in your body. There are people that think magnesium is need for up to 800 processes in your body not the 300 that was previously thought. Magnesium deficiency create calcification henes blocked arteries and

heart disease and
alzheimers etc,
creating stomach
acid, creating
hormones needed in
your detox pathways
etc, almost every
single disease
imaginable is traced
back to sever
magnesium
deficiency and
somehow pharma
drugs deplete this
the most.....is this
accident or design,
you decide.

Reply

Whisperingsage

According to
Morley
Robbins who
conducted
his own
meta study
(of pubmed
among other
primary

studies)
magnesium
is essential
for over
3000 human
processes
and is
regarded as
the master
mineral
controlling
not only Ca
but Iron and
Copper
balance plus
many others.
Modern diet
is sadly
lacking in
many
minerals and
irrespective
of which way
you look at
it, health
starts in the
soil!
Another
great
example is
the delusion
of
industrialised
farming was
the
introduction
of of
artificial
fertilisers
from the
1950's on,
into the soil.

This simple act neutralised the sulphur fixing bacteria in the soil and as we know S is required in all out cells and essential to detoxification cell permeability, membrane integrity and so forth.

Reply

Amanda says: February 12, 2021 at 2:47 pm

@Daniel-
Interesting-thanks
for the info on
Keshan's disease.

Also, on the cause of
AIDS, Dr. Nancy
Banks, author of
AIDs, Opium,
Diamonds and
Empire, has spoken
about the the true
cause of sickness
among the group of
gay men who were
the first cases of
AIDS(you can listen
to her here:
<https://www.youtube.com/watch?>

v=vIX4ijTKXJw&feature=emb_title)

She says the first group of gay men who came down with AIDs did so because they blew out their own immune systems with their extremely unhealthy lifestyle and high risk behaviors. She says this group of gay men were engaging in high risk sexual behavior, including countless (hundreds of) sex partners, chronic antibiotic use for repeated STDs, unhealthy eating habits, partying lifestyle, staying up late, drinking, and taking drugs, especially highly dangerous drugs called “poppers,” which were known to suppress their immune system. She says that because of their extremely unhealthy lifestyle and high risk behaviors, they blew out their own immune systems. But since big pharma does NOT make money off of

focusing on the true cause of illness (lack of proper nutrition, lack of access to clean water, exposure to toxins, etc) — they tried to explain it all away as being due to a virus, so they could make money off of it.

I think most of those people who died from being HIV positive died because they were taking the extremely toxic drug known as AZT. (So all those people in Africa who died from HIV, actually died from a depopulation agenda under the guise of medical treatment via AZT for HIV).

And I'm pretty sure the maker of the sex/party drug known as "poppers" which were known to suppress the immune system, was the same company that made the AZT (pretty sure the name back then was Wellcome). So, with the virus cover story, Wellcome was

never held accountable for the damage “poppers” did to the immune systems of these gay men, and they were able to make billions off of AZT.

Also, Dr. Banks also talked about problems with testing, and how a person could test positive for HIV in Africa, then go to Australia and test negative. She also said that they did some trickery with the diagnostic criteria. Apparently, in South Africa, there were people with lung problems due to working in the mines for Barrick Gold, and they were planning on suing them. But then they changed the diagnostic criteria for HIV/AIDS to include such lung problems, so those people could no longer sue Barrick Gold because now they were told their lung problems were due to HIV/AIDS.

It's truly sickening
what there were able
to get away with,
and I find it
incredibly
frustrating that you
can't get people
interested to look
into this scientific
fraud.

There is info
on the Aids
dilemma,
William
Campbell
Douglass II
MD, who
wrote The
Milk Book,
also wrote
WHO killed
Africa? A
white paper
on the
creation of
AIDs on the
Ft Detrick
MD
laboratory, I
had heard of
this lab in
the 80's
listening to
Mae
Brussell's
broadcasts.

It's a horrible but interesting story. You can find this paper free on biblebelievers.com I think. He discusses how it was deliberately created to kill the blacks of Africa. That's where it was started.

Written in the morning of
Feb. 18:
Now 542 “cases” of
“infected” people on board
the Diamond Princess in
quarantine in a Japanese
harbor. Yet not one
reported case of a moderate
or severe case of pneumonia
despite some “cases” were
“discovered” over 2 weeks
ago. I think this is very
curious.

Polymerase Chain Reaction
kits should never be used
for medical diagnoses. They
can read positive for a ham
sandwich. Yet these tests
are referred to as “cases” by
the entire world media. This
whole thing is beginning to
stink. I am suspecting a
rotting, roadkill
nothingberger.

they are bloating numbers in china using these crap tests which anyone and their dog will trst positive for and i honestly reckon a lot of the deaths over there is from phneumonia of which the people in china are dying at a rate of 300k a year because of the air quality. Imagine those numbers put to the 'coronavirus epidemic' it would be soooooo easy to creat mass panic to those that do not understand what is going on. It will be like 300k people died this year from the deadly corona please CDC SAVE US ALL, pump me up with your sweet sweet lifesaving vaccine please save humanity.....can see it happening a mile off the public really need to wake upand get a clue but

alas it isnt gonna happen. Considering this is the standard for people nowadays 'buys a phone from apple.....it breaks it cost them a fortune apple doesnt tofix it, they are upset and angered with apples response especially because it cost a fortune and it was rubbish and so it the customer service.....begrudging they by the latest phone angered by what apple did to them, the new phone is even worse, you get the picture. If you expect people like this to use their brains we are in trouble, the brainwashing and vaccination definitely has served its purpose people are more stupid than ever.

Jon,

Thanks again for the research and documentation.

To all of your readers who have not experienced the ongoing 36 years of agonizing debate debunking the bankrupt “science” behind HIV, this might seem tedious, yet PATTERN RECOGNITION is essential here, when we focus on the current 2019-CoV “Coronavirus” scare.

It’s Deja vu—all over again.
(to quote Yogi Berra)

Certainly Celia Farber deserves a Pulitzer Prize for her outstanding efforts and undaunted determination in exposing this massive fraud and deadly scam. Former head of Rethinking AIDS, the late Dr. Etienne De Harven, should receive the Nobel Prize posthumously. Great work from both!

But to sum it up, what they essentially say in this article, is that trying to identify a pure viral pathogenic culprit using ELISA antibody or Western Blot tests, and even PCR with the aid of EM is like trying to catch an unambiguous fart in the wind with an old jar, in a area between a sewage plant, pig farm and junk yard. Which means—there is no real valid science here. Even a big magnifying glass

can't specifically identify
that dreaded fart in the jar.

The problem is, they (these
germ hunters) are STILL
doing this again with the
“coronavirus.” De Harven
sums it up here when he
says, “Fear is good business,
and viruses generate fear
most efficiently.” That is
what this business is—
sophisticated Fear
mongering.

Dr. Anthony Fauci (head of
NIAID) has been at this
from the beginning with
Gallo in 1984, and he is still
leading the charge now with
2019-nCoV. But the stakes
are much higher here and
now.

Here is the question? Is the
“coronavirus” a cover story
for what might actually be a
serious chemical/biological
agent that has sealed off
Wuhan and created a
diplomatic disaster? There
is no question about the
drastic quarantines
imposed on travelers and
the refusal of China to allow
US CDC health officials into
the area. Even Senator Tom
Cotton thinks China might
have bungled a bioweapon
and wants investigation.

So is all of this scare for
what has been deemed a

weak flu bug? Is Fauci entangled in a diplomatic cover-up? He has been doing this for 36 years now. Deja vu?

Thank you, Jon, for sharing your magnificent writing skills. Fear induces compliance and that’s what the “medical profession” is after, compliance on all levels. In Canada we now have the “Right to Die” form to be conveniently produced when a person prefers to check out instead of enduring discomfort. The fact that there are so many of us baby boomers concerns me from the point-of-view of targeting.

Reply

Misha says: August 18, 2020 at 2:49 pm

Great article.

We must never forget to avoid the temptation to fall in the biowarfare idea because it only keeps us in the place where they need the awaiking minds to be... We reinforce what they want us to believe, that there is a virus that cause an outbreak.

There is no need for the existance of a virus to make the Lock Step (search rockefeller lock step 2010 pag. 18), they just need Netflix, The CDC, the WHO, the NHI , The same Fauci from the HIV hoax, and some pseudo science and big pharma. The rest is done by the Media day by day.

There is no need for a new virus for respiratory problems in one of the most air polluted city in the world as you wrote in previous articles. And some more toxic particles added by the geoengineering deployment I can add...

PCR cant detect viruses, Karry Mullis its inventor (Nobel prize won for that)

always reminded us that.

That's why they use it.

I have to say thanks Jon Rappoport for your never-ending effort to share your knowledge, your experience, your thoughts.

It's very important your work for young generations, they born with Netflix, Facebook and a big TV that tells them the vision.

Less and less people want to question, it's easy for them to accept Mass media and don't think.

Misha from Argentina

When one cultivates a society to blindly "trust", in and of itself causes a deadly "virus". The "virus" name?

Complacency

This obscene "virus" is always accompanied by at least 2 adjuncts;

Cowardice – Destroys the body's spine, wreaks havoc with its genitalia, the ability to speak out and inform/take a stand against those responsible

REGARDLESS of whom
they may be.

“political correctness” –
Destroys the body’s
focus/willingness to put-it-
out-there. The body
becomes worried that it
may expose itself to ridicule
by a mass of foreign
invaders’ ignorance or
vested interests.

For MORE concerning this
all-too-often terminal
disease?
Research “Hegelian
Dialectic”

Finally, the next time a
(s)elected “official” tries to
sell you something,
anything, by stating
“Statistics show” or Studies
conducted prove”...etc. etc.
Demand that (s)elected
“official” PRODUCE those
“statistics” or “studies”
along with ALL criteria
showing whom, how, what
was done to codify the
results....

Sodium Fluoride in
drinking water comes to
mind...Mercury dental
amalgams... “slow poisons”,
(Aluminum/Mercury), in
vaccines....SERIOUSLY!?

Thanks for the article Mr.
Rappoport –
re-posting

Jon – Couple your observations of the great difficulty of detecting and verifying viruses with:

- 1) the fact that viruses are merely random DNA and RNA fragments from spent, lysed and recycled cells; i.e. random pieces of the whole genome, created day in and day out by normal metabolism in every living thing; and
- 2) The fact that there are hundreds of billions of billions of ‘viruses’ literally all over the world and throughout the oceans and the seas. Viruses are everywhere; you are breathing them in and exhaling them out right now. See here for a description of this fact: Viruses Create More Biodiversity Than Any Other Comparable Taxon by David Seaborg (<https://megasociety.org/noesis/200.pdf>)

Excellent work! Thanks!

Another point of consideration being left out of the discussion of this so-called “virus” is the wholesale acceptance of

germ theory as fact, which has in fact never been proven. It is merely a working hypothesis in mainstream allopathic medicine. A falsehood, actually, if one dares to dive into its origins.

Hallelujah!!!

I think it is worth repeating:

Hallelujah!!!

Here is a story. When I first learnt that the mind was key and germs were not the cause of disease I had one burning question. It wasn't vaccines (I could see their "success" was just a self-fulfilling prophecy) and I could see antibiotics just masked symptoms.

My one burning question was myxomatosis. How did biological warfare work with rabbits if the issue was the mind?

So I did something no doctor has ever done – checked the actual story of what happened (with some prompting).

Turns out that myxomatosis

was like “Invisible Boy” in the movie *Mystery Men*. The joke in the movie was that the boy was only invisible if nobody was looking. It was the same with myxomatosis. The “virus” only ever killed rabbits that were already dead.

Rabbits breed like – well, rabbits. Their populations can easily explode in a single generation if the climate conditions are favorable. The flip side of course is that rabbits die easily in unfavorable conditions. This means that their populations fluctuate wildly from one year to the next.

So whether or not myxomatosis “works” is purely dependent on whether you introduce the virus at a peak in their population or a trough. When they had field trials of the virus in Australia, it was an abject failure. However, rabbit populations in the wild eventually peaked so they claimed that the virus “escaped” and was the cause of the population decline that would have happened anyway (this was exacerbated because there was a concurrent rabbit poisoning regime).

Of course, rabbit populations peak *and* trough. And trough they did a few years later and the population started to grow again. So what did the scientists say?

Well they said “the rabbits must be immune now to the virus”.

Amazing. Our kids are all supposed to be vaccinated for measles despite thousands of generations of human exposure to this “virus” but in just a handful of generations of rabbits, they were practically all naturally immune to myxomatosis.

So it is clear that the myxomatosis story is a lie. The field trials didn't work (they began in the late 1930s and the deaths didn't occur until 1950).

It should also be noted that estimating rabbit populations is only slightly more of an exact science than virology is. Reports of “90 per cent die offs” no doubt reflect wishful thinking vastly more than they do sampling or census data.

For what it's worth: I've done a bit of research on Microfiber cleaning cloths. These remarkable cloths reportedly remove almost 100% of all bacteria AND VIRUSES. (Viruses are much smaller than bacteria.) To activate the cloth you simply soak in plain tap water, and wring out the excess moisture. (Apparently, the water activates the incredibly tiny fibers in to an erect position – A single swipe across a surface such as a desk with an activated microfiber cloth, is the equivalent of literally MILES of fiber coming into contact with that surface. The obvious inference from this claim is that the germs are removed mechanically by these vanishingly tiny fibers.) You can find microfiber cloths in janitorial supply houses and auto supply stores. I carry a damp microfiber cloth with me in a sandwich baggy and wipe my hands with it several time during the day...(Follow laundering instructions to the letter.)

This is probably the dumbest thing I've ever said, but maybe the players were trying to make a chemical look like a virus...

Reply

Protestant says: February 20, 2020 at 7:54 am

I was just thinking that about the rabbit myxomatosis in Rtp's comment—whether the rabbits were just poisoned, like the kids with “autism” are just poisoned by vaccine chemicals causing brain damage. So if your comment is the “dumbest”, mine is, too! 😊

Reply

jj says: February 20, 2020 at 9:43 am

Not dumb at all. I've been thinking about it, too. Still, the most plausible explanation is some serious chemicals in the air over Hubei. Virus is a great cover-up for this.

This is an excellent look at the virus issue. I for one believe that they are a figment of the overactive imagination of the pHARMaceutical industry.I encourage you to look at the work of Dr Stefan Lanka Virologist and Dr R G Hamer MD

If the West does not soon find whites killed by Covid19, it is going to be a HUGE problem, for the world will wonder, and ask: Why is it that only non-whites are killed by Covid19 in the West? Does the virus discriminate? On the other hand, IF many whites in the West are killed by Corona, then the same security measures as in China will be implemented in the West:

quarantines, control zones
and the withdrawal of
countless of physical cash
(money notes) in
circulation.

If the West does NOT
exercise these same security
measures as in China, then
it is also a HUGE problem
for the world will wonder
and ask:

Why are these radical
precautions –
unprecedented in world
history – in China needed
while quarantines and
withdrawal of cash are
absent in the West !? Does
the virus discriminate?

Something big is coming
our way

Excellent comment
NAN but I suppose
we should never
underestimate the
stupidity of people.

Remember, this is
the same populous
who swallowed the
idea of a virus that
could easily affect
every black person
in Africa but could
only affect white
people if they were

homosexuals or IV
drug users who lived
in San Francisco, LA
and New York.

Very poignant and hard to find information is discussed in the interviews recapped by this essay. Judging by the quality of the comments posted, the subject and it's technical detail are not too abstruse for general readership. This is what "conversation about serious scientific issues looks like". Thanks for the links, the comments and the deepening level of interest in this timely and critical subject.

I am trying to get my head around your arguments as they make a lot of sense. But I am still trying to understand how you explain the fact that viruses have been isolated. There is SARS, MERS, HIV. There are actually multiple strains that have been gene sequenced and peer reviewed published. There is COVID-19 virus isolated and published as well. It is freely accessible to compare with other virus sequences. People have studied and compared and see almost identical similarity with SARS with additions HIV inserted. Multiple labs have isolated COVID and published the results that match. I just don't see how you can say that viruses have not been shown to be causative agents.

Christine Massey says June 20, 2020 at 7:39 pm

Thank you so much Jon. So valuable.

Inspired by you, David Crowe, Dr. Andrew Kaufman, etc. I've been submitting Freedom of Information requests to Canadian institutions asking for ANY records

describing isolation of a SARS-COV-2 virus from a diseased patient (in a legit fashion).

Health Canada has approved dozens of covid19 RCTs & tests, but has no such records.

U of Toronto (involved in an isolation claim, covid19 vaccine & test development)forwarded the request like a hot potato to Sunnybrook Health Sciences Centre (also involved in the isolation claim). Sunnybrook says they need more time to consult with someone outside their institution!

My local municipality, Region of Peel, admitted they had no records.

Screenshots of the responses:
