

# Massive 'Horse' Lies About Nobel Prize Winning Treatment

Analysis by [Dr. Joseph Mercola](#)

✓ Fact Checked

April 06, 2023

## STORY AT-A-GLANCE

- › KFOR news ran a fake story in which a doctor claimed emergency rooms in Oklahoma were inundated with people who used horse ivermectin paste as a treatment for COVID-19 and overdosed
- › The story turned out to be pure fiction, as no such cases have occurred. Still, KFOR has not retracted the story or issued a correction
- › The idea that ivermectin is a horse dewormer that poses a lethal risk to humans is a deceptive narrative aimed at dissuading people from using a safe and effective drug against COVID-19
- › While ivermectin is used as a dewormer in animals, it is also a human drug, approved by the FDA since the mid-1990s. It's on the World Health Organization's list of essential medicines for several parasitic diseases and, like many other drugs, ivermectin is used off-label for other diseases and conditions
- › In addition to being antiparasitic, ivermectin also has potent antiviral properties and has even been shown to protect against SARS-CoV-2 spike protein damage

---

** From Dr. Joseph Mercola**

Since COVID-19 first entered the scene, exchange of ideas has basically been

outlawed. By sharing my views and those from various experts throughout the pandemic on COVID treatments and the experimental COVID jabs, I became a main target of the White House, the political establishment and the global cabal.

Propaganda and pervasive censorship have been deployed to seize control over every part of your life, including your health, finances and food supply. The major media are key players and have been instrumental in creating and fueling fear.

I am republishing this article in its original form so that you can see how the progression unfolded.

*Originally published: September 13, 2021*

In recent days, another big, fat lie has been allowed to circulate unchecked and unverified in headlines across the media landscape. "Ivermectin: Why Are U.S. Anti-Vaxxers Touting a Horse Dewormer as a Cure for COVID?" asks The Independent.<sup>1</sup> Similar headlines — all focusing on "horse dewormer" — have been plastered across many other media outlets.

It appears Oklahoma's KFOR news was the first to run a fake story that made this false narrative explode. September 1, 2021, KFOR reported that emergency rooms were overrun with patients who had overdosed on horse ivermectin. The claim was supposedly made by doctor Dr. Jason McElyea. According to KFOR:<sup>2</sup>

*"Dr. McElyea said patients are packing his eastern and southeastern Oklahoma hospitals after taking ivermectin doses meant for a full-sized horse, because they believed false claims the horse de-wormer could fight COVID-19. 'The ERs are so backed up that gunshot victims were having hard times getting to facilities where they can get definitive care and be treated,' he said."*

## **Fake News Alert**

Other media outlets ran with the story, including Rolling Stone magazine,<sup>3</sup> The Daily

Mail,<sup>4</sup> the Independent,<sup>5</sup> Newsweek,<sup>6</sup> The Guardian,<sup>7</sup> Yahoo News<sup>8</sup> – which later published a story saying a hospital was "disputing" the claim – and MSNBC's Rachael Madow.<sup>9</sup>

There was just one problem. It was a fake story. A few days after the story made major media rounds, the Sequoyah Northeastern Health System issued a public notice and posted it on its website homepage, dismissing McElyea's claims as pure fiction:

## Message from the administration of Northeastern Health System - Sequoyah: ×

Although Dr. Jason McElyea is not an employee of NHS Sequoyah, he is affiliated with a medical staffing group that provides coverage for our emergency room.

With that said, Dr. McElyea has not worked at our Sallisaw location in over 2 months.

NHS Sequoyah has not treated any patients due to complications related to taking ivermectin. This includes not treating any patients for ivermectin overdose.

All patients who have visited our emergency room have received medical attention as appropriate. Our hospital has not had to turn away any patients seeking emergency care.

We want to reassure our community that our staff is working hard to provide quality healthcare to all patients. We appreciate the opportunity to clarify this issue and as always, we value our community's support.

However, rather than retract the article, which would be appropriate for a piece that

turns out to be fictional from start to finish, Rolling Stone simply posted an "update" at the top of the article, noting Sequoyah's rebuttal. KFOR has issued no correction at all, as of September 7, 2021. The Guardian issued an update at the bottom of its article, but did not include the hospital's statement that NO patients have been treated for ivermectin overdose.

Hundreds of news articles have also brought attention to alleged rises in ivermectin-related calls to poison control centers around the U.S. These too, it turns out, are based on the flimsiest of data. For example, in Kentucky, poison control reports having received six calls relating to ivermectin paste overdose, compared to an average of one per year.

The department of health in Mississippi similarly noted that while calls to poison control involving ivermectin paste have seen a slight increase, all cases have been mild and none have required hospitalization due to toxicity.<sup>10</sup> Clearly, people are not dying from horse ivermectin overdoses, and they're certainly not dying from appropriately-dosed and prescribed oral ivermectin.

## **False Narrative Alert**

This idea that ivermectin is a horse dewormer that poses a lethal risk to humans is pure horse manure, shoveled at us in an effort to dissuade people from using a safe and effective drug against COVID-19.

The intent is clear. What our so-called health agencies and the media are trying to do is confuse people into thinking of ivermectin as a "veterinary drug," which simply isn't true. Ultimately, what they're trying to do is back up the Big Pharma narrative that the only thing at your disposal is the COVID shot. As noted in a recent HuffPost article:<sup>11</sup>

*"Health experts — the kind who practice on humans — agree that the best way to prevent yourself from catching the virus is to get vaccinated, wear a face mask and stay out of crowds."*

In an August 21, 2021, Twitter post,<sup>12</sup> the Food and Drug Administration said, "You are not a horse. You are not a cow. Seriously, y'all. Stop it," linking to an FDA article on why you should not use ivermectin to prevent or treat COVID-19.

The MSNBC report in the video above is another perfect example of the deceptive narrative being spun around ivermectin. The host blatantly mixes data points together, talking about ivermectin horse paste in one breath and rising prescriptions for ivermectin in the other, as if doctors are now prescribing veterinary drugs just to appease desperate patients. He then goes on to refer to doctors' success with ivermectin as "anecdotal."

Comedian and podcast host Joe Rogan, who recently developed COVID-19 and treated it with ivermectin and a slew of other remedies, is also being badmouthed for daring to share his success story. NPR, for example, reported:<sup>13</sup>

*"Joe Rogan has told his Instagram followers he has been taking ivermectin, a deworming veterinary drug formulated for use in cows and horses, to help fight the coronavirus. The Food and Drug Administration has warned against taking the medication, saying animal doses of the drug can cause nausea, vomiting and in some cases severe hepatitis."*

Did Rogan take horse ivermectin paste? No. Did he take animal doses of it? No. As you can see in the video above, Rogan talked with "multiple doctors" who told him to take it and, ultimately, he did take it and he got well, remarkably quickly. Yet NPR blatantly blends veterinary and human use together, as if to insinuate that he did take horse-level doses of it.

It's worth noting that the FDA is not warning against low-dose oral ivermectin as routinely prescribed for human use. They're warning against animal doses, which no licensed medical doctor would prescribe. In short, doctors are not prescribing ivermectin for horses, nor are they prescribing it at horse dosages.

# Ivermectin Is an Essential Human Drug

While ivermectin is used as a dewormer in animals, it is also a human drug, approved by the FDA since the mid-1990s for the treatment of river blindness.<sup>14</sup> It's also on the World Health Organization's list of essential medicines for several parasitic diseases.<sup>15</sup>

**“ Ivermectin has several different properties. In addition to being antiparasitic, it also has potent antiviral properties and has even been shown to protect against SARS-CoV-2 spike protein damage.”**

Like many other drugs, ivermectin is also used off-label for other diseases and conditions. Systemic lupus and papulopustular rosacea,<sup>16</sup> for example, are sometimes treated with ivermectin. In 2018, a patent was filed to treat certain autoimmune disorders with ivermectin.<sup>17</sup>

When used preventatively for COVID-19, or as treatment for acute SARS-CoV-2 infection, ivermectin is being used off-label, but there's nothing unusual or suspect about this at all. Many drugs are used "off label." So, when media warn that "ivermectin is not approved by the FDA for the treatment of COVID-19," that essentially means nothing. It certainly doesn't mean the drug isn't FDA approved at all, or that it's only approved for animals.

The fact is, ivermectin has several different properties. In addition to being antiparasitic, it also has potent antiviral properties and has even been shown to protect against SARS-CoV-2 spike protein damage.

Research shows ivermectin impairs the spike protein's ability to attach to the ACE2 receptor on human cell membranes.<sup>18</sup> The drug can also help prevent blood clots by binding to SARS-CoV-2 spike protein. This prevents the spike protein from binding to

CD147 on red blood cells and triggering clumping.<sup>19</sup>

As for safety, more than 4 billion doses have been given to (human) patients since 1998, and only 28 cases of serious adverse events have been reported in that time.<sup>20</sup> Yet the FDA now claims ivermectin should not be used for COVID-19 because the drug may cause "serious harm," is "highly toxic" and may cause "seizures," "coma and even death"<sup>21</sup> – warnings that are far more applicable to COVID shots.

## **Ivermectin Suitable for All Treatment Stages**

Since early on, the Frontline COVID-19 Critical Care Alliance (FLCCC) has been trying to get the truth out about ivermectin. The FLCCC's prophylaxis and early outpatient COVID-19 protocol is known as I-MASK+<sup>22</sup> while the hospital treatment is called I-MATH+.<sup>23</sup> All include ivermectin. As noted by the FLCCC in a news release:<sup>24</sup>

*"The data shows the ability of the drug Ivermectin to prevent COVID-19, to keep those with early symptoms from progressing to the hyper-inflammatory phase of the disease, and even to help critically ill patients recover.*

*... numerous clinical studies – including peer-reviewed randomized controlled trials – showed large magnitude benefits of Ivermectin in prophylaxis, early treatment and also in late-stage disease. Taken together ... dozens of clinical trials that have now emerged from around the world are substantial enough to reliably assess clinical efficacy."*

FLCCC president and chief medical officer Dr. Pierre Kory has testified to the benefits of ivermectin before a number of COVID-19 panels, including the Senate Committee on Homeland Security and Governmental Affairs in December 2020<sup>25</sup> and the National Institutes of Health COVID-19 Treatment Guidelines Panel in January 2021.<sup>26</sup>

The two protocols – I-MASK+<sup>27</sup> and I-MATH+<sup>28</sup> – are available for download on the FLCCC Alliance website in multiple languages. The clinical and scientific rationale for

the I-MATH+ hospital protocol has also been peer-reviewed and was published in the *Journal of Intensive Care Medicine*<sup>29</sup> in mid-December 2020.

## **Strong Evidence for Ivermectin**

April 24 through 25, 2021, Dr. Tess Lawrie, director of Evidence-Based Medicine Consultancy Ltd.,<sup>30</sup> hosted the first International Ivermectin for COVID Conference online.<sup>31</sup>

Twelve medical experts<sup>32</sup> from around the world – including Kory – shared their knowledge, reviewing mechanism of action, protocols for prevention and treatment, including so-called long-hauler syndrome, research findings and real world data. All of the lectures, which were recorded via Zoom, can be viewed on Bird-Group.org.<sup>33</sup>

A one-page summary of the clinical trial evidence for ivermectin is available on the FLCCC website,<sup>34</sup> while a listing of all ivermectin trials done to date, with links to the published studies, can be found on [c19Ivermectin.com](http://c19Ivermectin.com).<sup>35</sup> So, what does the evidence show? In summary, studies have demonstrated ivermectin:<sup>36</sup>

- Lowers viral load.
- Inhibits replication of many viruses, including SARS-CoV-2 and seasonal influenza viruses. An observational study<sup>37</sup> from Bangladesh, which looked at ivermectin as a pre-exposure prophylaxis for COVID-19 among health care workers, found only four of the 58 volunteers who took 12 mg of ivermectin once per month for four months developed mild COVID-19 symptoms, compared to 44 of the 60 health care workers who had declined the medication.
- Inhibits inflammation through several pathways and protects against organ damage.
- Prevents transmission of SARS-CoV-2 when taken before or after exposure.

- Speeds recovery and lowers risk of hospitalization and death in COVID-19 patients – The average reduction in mortality, based on 18 trials, is 75%.<sup>38</sup> A WHO-sponsored review<sup>39</sup> suggests ivermectin can reduce COVID-19 mortality by as much as 83%.

## **Who's Actually Following the Science?**

As noted in an August 3, 2021, review paper in *New Microbes New Infections*, titled "Ivermectin: A Multifaceted Drug of Nobel-Prize Honored Distinction With Indicated Efficacy Against a New Global Scourge, COVID-19":<sup>40</sup>

*"In 2015, the Nobel Committee for Physiology or Medicine, in its only award for treatments of infectious diseases since six decades prior, honored the discovery of ivermectin (IVM), a multifaceted drug deployed against some of the world's most devastating tropical diseases.*

*Since March 2020, when IVM was first used against a new global scourge, COVID-19, more than 20 randomized clinical trials (RCTs) have tracked such inpatient and outpatient treatments. Six of seven meta-analyses of IVM treatment RCTs reporting in 2021 found notable reductions in COVID-19 fatalities, with a mean 31% relative risk of mortality vs. controls.*

*During mass IVM treatments in Peru, excess deaths fell by a mean of 74% over 30 days in its ten states with the most extensive treatments. Reductions in deaths correlated with the extent of IVM distributions in all 25 states with  $p < 0.002$ .*

*Sharp reductions in morbidity using IVM were also observed in two animal models, of SARS-CoV-2 and a related betacoronavirus. The indicated biological mechanism of IVM, competitive binding with SARS-CoV-2 spike protein, is likely non-epitope specific, possibly yielding full efficacy against emerging viral mutant strains."*

Despite the evidence, the American Medical Association (AMA), the American Pharmacists Association (APhA) and the American Society of Health-System Pharmacists (ASHP) are now banding together to call on doctors to immediately stop prescribing ivermectin for COVID outside of clinical trials.<sup>41</sup>

Hopefully, doctors will evaluate the evidence for themselves and do what makes sense and is best for their patients, rather than cater to Big Pharma. Indeed, as the U.S. wants to eliminate all use of ivermectin, other countries are starting to use more of it. India, for example, has added ivermectin for COVID-19 to its list of essential medicines.

The Tokyo Metropolitan Medical Association also added ivermectin to its home treatment protocol August 13, 2021, and Indonesia's government not only authorized the use of the drug but also created a website showing real-time availability of the drug. Hospitals in Indonesia started using ivermectin July 22, 2021. By the first week of August, cases and deaths were plummeting.<sup>42</sup>

INDONESIA

## The 'Delta Variant' Is Vaccine Injuries, Whistleblower Claims

In a recent Stew Peters program, a nurse blows the whistle on several commonly-held beliefs. She points out that her hospital was never, not even during the height of the pandemic 2020, over capacity due to COVID patients. Disturbingly, she notes that most hospital personnel are still unaware that the PCR test is completely unreliable, and care is all based on that test.

Even if you do not have any COVID symptoms, a positive test will land you on the COVID ward, where standard protocol calls for Remdesivir and, if you have low oxygen, being put on a ventilator. She says most patients get worse on Remdesivir, which has been shown to cause heart and kidney problems.

She points out that for a short time, the drug was given in combination with ivermectin, and during that time, patient outcomes were much better. Ivermectin was then removed from the protocol.

As for the Delta variant, there are no commercial tests that will identify variants, although genetic sequencing in a research lab would be able to differentiate them. The nurse stresses that she's never seen "Delta" specified on any patient chart – a claim that raises the question how officials are able to claim that most COVID-19 patients are now infected with the Delta variant.

She's also reporting seeing a significant number of vaccine injuries, yet she's not aware of a single instance where the injury was reported to the U.S. Vaccine Adverse Effect Reporting System (VAERS). Whenever she's brought her suspicions to the doctor, she's been rebuffed and the vaccine link has been dismissed.

The most shocking take-home from this interview is that the supposed surge in Delta cases are in fact mislabeled vaccine injuries, according to this whistleblower.

*"The Delta variant is the vaccine injuries," she tells Peters. "It's common knowledge around the staff that is aware of what's going on, [who are] paying attention [and] aren't in denial."*

THE FDA'S GROSS MALFEASANCE WITH IVERMECTIN As document in our book, *The Courage to Face COVID-19: Preventing Hospitalization and Death While Battling the Bio-Pharmaceutical Complex*, the “flooding the zone” campaign waged against ivermectin will go down in history as one of the most mendacious and perfidious in medical history. Ivermectin has one of the safest profiles in all of medicine and multiple studies prior to 2020 showed it to have potent anti-viral properties. Most importantly, Drs. Juliana and Jean-Jacques Rajter conducted a proper controlled trial of the drug in the hospital setting in 2020 and published their study in the prestigious CHEST journal of pulmonology.

The FDA KNEW about Ivermectin’s excellent safety profile, and it KNEW about the evidence showing the drug’s strong signal of benefit. Nevertheless, the agency chose to suppress this evidence and conduct a smear campaign against the drug. In a recent lawsuit filed in a US District Court in Texas (ROBERT L. APTER, et al., Plaintiffs, v. U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES, et al., Defendants) counsel for the defense made the following claim in its motion to dismiss the lawsuit.

Big Pharma, Big Teg, Big Money, and government institutions in coexistence with the Great Reset guidelines. they are murdering people by rejecting the early and preventative treatments of true science. A great reference in information and defense of ivermectin, is Pierre Kory, MD. Remember Dr. Mercola's report as a guest Dr. Pierre Kory on the war on ivermectin and all the reports where it is revealed Co-Developer of effective, evidence/expertise-based COVID Treatment protocols with the medical professionals and science giants of the Front-Line COVID-19 Critical Care Alliance [substack.com/.../31671068-pierre-kory-md-mpa](https://substack.com/.../31671068-pierre-kory-md-mpa)

THE GLOBAL DISINFORMATION CAMPAIGN AGAINST IVERMECTIN - THE "BLITZ" The "Blitz" is a Big Pharma Disinformation tactic defined as "harassing scientists who speak out with results or views inconvenient for industry."

[pierrekory.substack.com/p/the-global-disinformation-campaign-187](https://pierrekory.substack.com/p/the-global-disinformation-campaign-187) (2022) TOGETHER TRIAL ON IVERMECTIN: DID THE GATES FOUNDATION FUND IT?

The TOGETHER trial was the largest, most damaging, and most blatantly fraudulent RCT ever done against ivermectin, and the one I did a three-post deep dive on. However, I just read a Substack post by Alexandros Marino "Do Your Own Research" where he presents even deeper evidence of previously unknown direct funding of that trial by the Bill and Melinda Gate Foundation (BMGF). What was most scoop-worthy in the post was its detailing of the multiple actions taken to remove and/or hide evidence of BMGF funding of the trial by investigators and BMGF.

Gui it is all beyond belief no matter what or how much one may have already been exposed to in life similar to this still going on Anti-Life Campaign. What is just as disturbing is to know this is just one in a long string of many similar campaigns who were only held back by not having the High-Tech Snoop/Stalker Tools of today. We are already dealing with too many destructive results from past campaigns and this is Icing on a very Toxic Cake.

## **Guillermou**

Yes, Just a total attack on the life and health of people Former BlackRock portfolio manager Ed Dowd and his analysts at the research firm, Phinance Technologies, published a report on the cost of the COVID-19 vaccine program in the United States for the year 2022. As a true crime author, I always focus on the human cost. I know that the death of a single young person can devastate a family and even an entire community. "26.6 million injuries; 1.36 million disabilities; 300,000 excess deaths." Note that this death count in one year is 5.2 times the number of men killed in ten years of combat in Vietnam.

Perhaps the most extraordinary thing about this state of affairs is that most Americans don't know it's happening. Every day, young people are dying from heart attacks, strokes, and seizures caused by COVID-19 vaccines. Most of their families and friends are led to believe that they just died—suddenly and unexpectedly—of acute conditions that were extremely rare in young people prior to 2021. [www.theepochtimes.com/health/analysis-covid-vaccines-caused-300000-exc..](http://www.theepochtimes.com/health/analysis-covid-vaccines-caused-300000-exc..) (04/01/2023)

## bowgirl

When the horse wormer story ran, I immediately noticed Ivermectin could be bought over the counter. I discovered it uses in animal and humans and stocked up. The paste is an effective wormer for a small flock of hens. We know now fake news often suggests the opposite is closer to the truth...

## meo7624

For those who are still believing CoV-2 is a naturally occurring pathogen, the death protocol of "treatment" is acceptable, and that the death jabs are real "vaccines", are most likely never going to believe the truth. Sadly that goes for probably 90% of people who work in hospitals, clinics, and doctors hired by a parent company. I "live" with that 24/7 with someone who has been in pharmacy since 1972. He is just unable to believe his profession would literally be trying to kill people instead of help them.

And yes, big Pharma wasn't as in-your-face with corruption back then, I guarantee you hospital "administration" is where this corruption begins on a local level. Then the docs, and other ancillary staff just follow along like little puppy dogs. They are forced to be jabbed or lose their jobs, and when they have enough nurses who quit that refuse the jabs, they are forced to hire "traveling nurses" at \$200/hr PLUS expenses. Which creates an income deficit, so they continue to push deadly jabs, and harmful protocols to get \$\$\$ from the government and big Rx companies.

This is systemwide across the US, and as people wake up and see the truth, many hospitals are insolvent with some closing. I quit going to my PCP at "said hospital" due his rather nasty insinuating remark when I refused the jab in 2021 "well if YOU get COVID at YOUR age, it won't end up well for you". I told him I was "taking care of business" and would take my chances. Hitler would be proud of the "death march" taking place across this whole world.

## **SaritaSarah**

meo7624, at minimum we know hospitals were incentivized to use Big Pharma treatments and to intubate patients with Covid. We also know that intubation is why most of those patients died, not because they had Covid, which is no worse than the flu. Now whether hospital administrators were in on the hoax, I'm not sure, but it sure seems that way.

## **grandmax4ever**

My unvaxx'd 99 y/o mom recently presented to the ER for evaluation of a fall. She was given a Covid test which came out positive, and we were all isolated. In January 2023, she had tested positive for Covid, was treated with IVM and hydrogen peroxide nebulization. After experiencing mild symptoms, she recovered with no after effects. The staff insinuated my siblings and I (mostly unvaxx'd) had infected her. After everything checked out, she was discharged home with Paxlovid, which I refused. As soon as we got home, we took the home Covid test and all of us, including my mom, tested negative. Since only my mom was tested for covid in the ER, I have to assume in the event she was admitted, she would be admitted and treated by the hospital as a Covid patient for the extra incentives.

**rrealrose**

Nice post!

Posted On 04/06/2023

---

Interesting Pete. Also: Dr. Mercola reported that 10% of people treated for COVID-19 report fatigue, shortness of breath, or chronic pain for three weeks or more. This happens even among people with mild cases of COVID-19. Also several tips focused on improving intestinal health - Do exercise. Yoga. - Consume supplements of CoQ10 and D-ribose, the basic component of ATP. - Consume foods rich in glutathione precursors, sulfur and selenium to stimulate glutathione production. - Restrict the period of food consumption to a period of six to eight hours. - Emotional Freedom Techniques (EFT) - Improve insulin sensitivity. ketogenic diet - Lumbrokinase, quercetin, vitamin D and zinc. - Use nebulized hydrogen peroxide with a 0.1% dilution.

As Dr. Mercola has informed us, to positively modulate the immune system we first need an organic anti-inflammatory diet, rich in phytochemicals, vitamins, minerals, proteins (lysine and threonine are antivirals and tryptophan for mood, glycine and proline for promote collagen in tissues, bones, blood vessels, etc.), a good rest, avoid stress, not smoking, exercise, etc., that is, a healthy lifestyle. Dr. Mercola's articles on anti-inflammatory diet, supplements and herbs. Vitamin D, C, B1, B6 and Zinc, selenium, iodine, fish oil and antioxidants are essential to control and prevent the viral process. Vitamin C strengthens your immune system and kills pathogens, including viruses, when taken in high doses.

## Guillermou

Foods and supplements considered helpful in the prevention of coronavirus infection include Nrf2 Diet, NAC, NAD, elderberry, curcumin, pterostilbene, spirulina, beta-glucan, glucosamine, lipoic acid, sulforaphane, melatonin, nitric oxide (preventive exercise, vegetable nitrates, arginine), aloe vera, curcumin, propolis, echinacea, astaxanthin, quercetin, sulfurafan, calendula, ginseng, resveratrol, probiotics from Bifidobacterium bifidum strains, and spobiotics. Two zinc ionophores (aid in assimilation): quercetin and epigallocatechin gallate (EGCG found in green tea. Melatonin works synergistically with vitamin D to optimize mitochondrial function. It also enhances vitamin D signaling. Caloric restriction and the fasting are essential. The sauna provides great detoxification benefits. Dr. Mercola's recommendations for long-term covid manifestations are holistic. This link may be useful\_ LONG COVID TREATMENT [covid19criticalcare.com/treatment-protocols/i-recover-long-covid-treat..](https://covid19criticalcare.com/treatment-protocols/i-recover-long-covid-treat..)

## **Pete.Smith**

Thanks Gui, Steve and Rose for contributions. Gui, your are right about the Bifidobacterium. Covid becomes more severe in people with low bifido, and also lowers levels further, some infected have none bifido left. So important to restore those levels of bifido with fermented food. Thanks Rose for the very good link about the Vaers lies.

## **rrealrose**

Hi Pete, as most countries were stupidly following lockstep measures, table-top practiced and pandemic response drills run for 2 decades; following the US CDC and Dr Fauci (increased in stature by placing this repeat offender, on some kind of pedestal) may be way more injured, many more with long covid symptoms across all highly vaxxed countries, than we can even imagine...

Posted On 04/06/2023

---

## **Pete.Smith**

Yes Rose, what a sick criminal Fauci is. He knew the mask were worthless protection, but told us to wear them to protect ourselves, so people taught they were safe with a mask on, so they got closer to infected people than without a mask. He also knew that Covid could infect at the edges of the eyes, but he never told us to protect the eyes with goggles. And of course he had many lies about the medication. So if fact, he deliberate promoted Covid infections. Yeah, how many millions got killed because of him?

## **mjt11860**

i know someone that had moderately severe covid that was getting worse. his friend gave him the horse dewormer version. he squeezed out the recommended amount for a 200 lb animal, which is what he weighs. his covid was completely gone the next day. so much for the MSM trying to shame people into not taking ivermectin by calling all versions, horse dewormer. turns out that even the horse dewormer version works. i told this to a customer & she told me about her friend who had stage 4 breast cancer. she decided to forego conventional treatment & instead used ivermectin. she was cured & is so elated, she wants to tell the world. intrigued, i did some research & sure enough, it does have anti-tumor properties.

## **nan5159**

I believe I had Covid in late 2019. I had on and off shortness of breath, severe occipital and rib pain, and eventual loss of taste. When I started Ivermectin as a preventative a few months later so I could go to a wedding, I woke up after the second dose one morning and couldn't believe how much better I felt than I had since first getting Covid. Out of all the doses I've taken I've not had one side effect and I'm very sensitive to medication. I also believe I feel better from having taken it. It's the only medication I don't think twice about using.

## MannaFood

As of the end of May, you will no longer be able to buy Ivermectin or any other animal medications without a prescription from a Vet. We just bought some "fish mox" and 6 tubes of Ivermectin on Amazon. It was less than \$10 a tube. We also bought some Ivermectin at Tractor Supply in 2020. We took the Ivermectin in the tube with some apple sauce as it completely hides the flavor. You only have a few weeks left to get this if you're interested. We are also trying to build up a stock of vitamins and supplements as that is their next target. It sure seems like they are going after anything that keeps us healthy.

I'm 75 y/o, unvaxxed, and after 2 years of "risky behaviors" (e.g., wearing a mask ever so loosely on the face, not sheltering in place, or social distancing) finally tested positive in January 2022. My symptoms never went beyond a scratchy throat (a walk in the park, really) and I recovered, achieving natural immunity with absolutely no after effects. In June 2022, I shared a hotel room for 8 days with my unvaxx'd 72 y/o sister who tested positive one day before our trip. Her symptoms were mild and she completed her 5 day quarantine in the hotel. She also recovered with no after effects and I never got reinfected.

Here's the twist my 99 y/o unvaxx'd mom with multiple comorbidities tested positive for covid in January 2023. Her symptoms were mild and after two days, her fever was gone and she also recovered with no after effects. Again, I never got reinfected again. We all used topical liquid IVM (used for animals), gargled with antiseptic mouthwash, and either did saline nasal rinses or hydrogen peroxide nebulization. Vaxx'd friends who didn't get early treatment didn't fare as well. We are so glad we didn't take the jab for something that had a better than 99% chance of recovery!

Good for you! Too many got scared, ran away from myriad solutions posed on this website and elsewhere, who knows what happened to them? Media indoctrination is indeed a dangerous tool when paid for by highly questionable Pharma marketing efforts, actual science be damned.

## **SaritaSarah**

I rarely leave my farm these days, but when I do, I always dose up on ivermectin. It's not so much that I fear the virus. I fear the vaxxed. I faint when I'm in their presence. Ivermectin helps minimize the impact of their cooties.

### grulla

Not only that, but there are other examples of, (especially poor and elderly), people using CERTAIN other vet medicines for human use. Back in our horse breeding days, my late wife ordered a 12 pack of (refrigerated) eye ointment in case of a possible conjunctivitis (pink eye) outbreak in our breeding herd/band. Luckily, we never had those problems due to our outdoor ranging environment, as opposed to confined barns and stables. So over the years, since I no longer keep livestock, (except a dog and cat), I have donated most of that Pfizer eye ointment to some others, some of who have used it in their own human eyes with good results.

As grulla mentioned regarding other veterinarian products that humans have used successfully, panacur c ( fenbendazole) is marketed as a dog dewormer. Someone else on the mercola site has brought this product up several times as to its success treating all kinds of cancer in humans. Check out Alternatives ( Volume 22. No. 8. August 2019) A Cure for Cancer... Hidden in Plain Sight by Dr. David Williams. I also think back to the horse--INVISIBLE INK. He ran in the Kentucky Derby maybe 20 years ago? About a year before his Derby run, he was terribly ill with Colic. The Vet recommended that he be put down, but the owner wasn't ready to do that. The owner talked with another "old-time" Vet who recommended the horse be given raw buttermilk. Raw buttermilk ( NOT pasteurized) left out in the sun until flies were in it. Long story short... the horse fully recovered and ran 2nd. in the Kentucky Derby a year later. Monarchos (sp?) won the derby that year.

**grulla**

If the water is dirty and doesn't smell right, the colic in horses can simply be attributed to the lack of clean water, thereby the horse refusing to drink and affecting it's digestibility of grass hay causing a colic gut blockage. Colic, as applied to horses, is not necessarily the same as colic in human babies. There are many more dissimilar examples of similar symptom names between humans and horses, and perhaps many other animals as well.

**grandmax4ever**

In the US, I bought my IVM from a farm feed store. The proprietor grilled me and I had to spin a tale (“to treat a cow I bought for meat being raised on a farm”) to make my purchase. My nephew was able to buy IVM thru mail order from India.
