

Nattokinase in the Prevention and Treatment...

PETER A. MCCULLOUGH, MD, MPH™ MAR 19  413  15 

Human Data Promising as Supplement Widely Used in Post COVID-19 and Vaccine Injury Syndromes

I'm vaccine injured and have been taking it for 18 months. For me it had a very dramatic effect. I'm convinced I wasn't yet another Died Suddenly story because of it. I now have normal d-dimer, crp results. Although my EKG is still significantly different than it was pre-vaccination. I'm guessing that will never go back to normal.

Natto contains vitamin K2. Vitamins D3, K2 and magnesium are a big deal in atherosclerosis prevention. As I understand it, K2 activates osteocalcin helping calcium deposition in bone and acts on matrix GLP to prevent deposition of calcium in arteries. (or something very much like that- if memory serves). I'm not quite sure how to put this together with the nattokinase, but these all seem to me to be important parts to consider in this important matter.

Question... My wife has polycystic liver disease. Last year, a surgeon marsupialized (de-roofed) the 4 largest cysts; 2 have now grown to take their place. She is avoiding all soy-based foods because the phyto-estrogens help the cysts to grow. She has some abdominal atherosclerosis based on recent imaging, but she needs to avoid nattokinase.

Do you propose direct consumption of D3, K2, and Mg? Thanks.

A very good question and point well made about the phytoestrogens. I don't propose or recommend anything because I don't know enough about the situation. One would need to know what is relevant about the genetics of polycystic liver disease and the status of liver and renal function - lab tests- for starters. Will these substances be metabolized as they are in most people? You might consider consulting with a primary care physician or naturopathic practitioner who might already know about this special case or will be willing to explore it with you and monitor the appropriate parameters and recommend course corrections as needed. With all good will I wish your wife and you the best.

That's interesting. Robert Malone recommends K2 MK7 amongst other things, for Cardiovascular health.

As does the magic of a Horse De-wormer within the beauty of Natures gift to humanity, Ivermectin.

doors Mar 19

Another tragedy, that when I tell people I took ivermectin many ask, "the horse dewormer?" That millions would he alive today had then been told the truth is a true crime against humanity.

Better to have ivermectin in your home med kit than Bayer Aspirin or Tylenol. This is Survival 101 Tech. Not "Remedy Referral for Dummies" from my HMO locations.

Oh and by the way before you leave today....have you got that new booster? DUH! NADA!

I have serious vaccine injury and have been taking Natto-Serra for nearly six months and haven't noticed anything getting better. But maybe it's meant to effect benefits on a scale too subtle for my discernment.

Dear Dr McCullough. Thank you for continuing to practice medicine (when so many of your colleagues sadly stopped around 3 years ago).

Please weigh in on the nano-technology / hydrogel controversy. It seems that hydrogel is appearing in the unvaccinated, and needs EDTA IV therapy to be broken down. I may be summarizing this wrong, but I haven't seen any claims about this addressed by yourself or others such as Dr. Malone. Could you explain if you have seen any weird structures in blood of vaccinated or unvaccinated individuals is showing structures using dark field microscopy? In Dr. Ana's argument, nattokinase can be used to help against micro clotting, but won't address / fix these structures. It appears that unvaccinated individuals will develop nano scale structures after simply being around vaccinated people.

Hopefully some pill form is available because I have found natto to be one of the world's least edible foods. I could get descriptive but I won't.

McC's apparent solution:

<https://www.twc.health/products/long-haul-formula>

Nattokinase is in the formulation. . .

For those asking the deep questions concerning your personal health:

<https://www.twc.health/pages/dr-peter-mccullough>

Remember, it is not a coincidence the Dr. McC is offering discussion on this subject.

We still do not know what is the complete recipe of the DOD produced shot poisons, right?

There is more than enough evidence to convict without ANY reasonable doubt ALL involved of massive Treason which would...

1. STOP ALL Treason since many of these same psychopaths overlap across ALL other Treason theatres.

2. Allow prosecution of Treason to move forward

WHY has this not happened anywhere???

NO victory can happen in America without UNITY of the right people to do things that matter to restore our Constitutional Republic.
