

Researcher: 'We Made a Big Mistake' on COVID-19 Vaccine

Analysis by [Dr. Joseph Mercola](#)

✓ Fact Checked

March 25, 2023

STORY AT-A-GLANCE

- › Canadian immunologist and vaccine researcher Byram Bridle, Ph.D., has gained access to Pfizer's biodistribution study from the Japanese regulatory agency. The research, previously unseen, demonstrates a huge problem with all COVID-19 vaccines
 - › The assumption that vaccine developers have been working with is that the mRNA in the vaccines would primarily remain in and around the vaccination site. Pfizer's data, however, show the mRNA and subsequent spike protein are widely distributed in the body within hours
 - › This is a serious problem, as the spike protein is a toxin shown to cause cardiovascular and neurological damage. It also has reproductive toxicity, and Pfizer's biodistribution data show it accumulates in women's ovaries
 - › Once in your blood circulation, the spike protein binds to platelet receptors and the cells that line your blood vessels. When that happens, it can cause platelets to clump together, resulting in blood clots, and/or cause abnormal bleeding
 - › Pfizer documents submitted to the European Medicines Agency also show the company failed to follow industry-standard quality management practices during preclinical toxicology studies and that key studies did not meet good laboratory practice standards
-

 From Dr. Joseph Mercola

Since COVID-19 first entered the scene, exchange of ideas has basically been outlawed. By sharing my views and those from various experts throughout the pandemic on COVID treatments and the experimental COVID jabs, I became a main target of the White House, the political establishment and the global cabal.

Propaganda and pervasive censorship have been deployed to seize control over every part of your life, including your health, finances and food supply. The major media are key players and have been instrumental in creating and fueling fear.

I am republishing this article in its original form so that you can see how the progression unfolded.

Originally published: June 14, 2021

The more we learn about the COVID-19 vaccines, the worse they look. In a recent interview¹ with Alex Pierson (above), Canadian immunologist and vaccine researcher Byram Bridle, Ph.D., dropped a shocking truth bomb that immediately went viral, despite being censored by Google.

It also was featured in a “fact” check by The Poynter Institute’s Politifact,² which pronounced Bridle’s findings as “false” after interviewing Dr. Drew Weissman,³ a UPenn scientist who is credited with helping to create the technology that enables the COVID mRNA vaccines to work. But, as you can see below, unlike Bridle, Politifact neglected to go beyond interviewing someone with such a huge stake in the vaccine’s success.

In 2020, Bridle was awarded a \$230,000 government grant for research on COVID vaccine development. As part of that research, he and a team of international scientists requested a Freedom of Information Act (FOIA) access to Pfizer’s biodistribution study from the Japanese regulatory agency. The research,^{4,5} previously unseen, demonstrates a huge problem with all COVID-19 vaccines.

“We made a big mistake,” Bridle says. “We thought the spike protein was a

great target antigen; we never knew the spike protein itself was a toxin and was a pathogenic protein. So, by vaccinating people we are inadvertently inoculating them with a toxin.”

This toxin, Bridle notes, can cause cardiovascular damage and infertility – a claim echoed by researchers such as [Stephanie Seneff, Ph.D.](#), and [Judy Mikovits, Ph.D.](#), whom I’ve interviewed about these issues.

Pfizer Omitted Industry-Standard Safety Studies

What’s more, TrialSite News reports⁶ that Pfizer documents submitted to the European Medicines Agency [EMA] reveal the company “did not follow industry-standard quality management practices during preclinical toxicology studies ... as key studies did not meet good laboratory practice (GLP).”

Neither reproductive toxicity nor genotoxicity (DNA mutation) studies were performed, both of which are considered critical when developing a new drug or vaccine for human use. The problems now surfacing matter greatly, as they significantly alter the risk-benefit analysis underlying the vaccines’ emergency use authorization. As reported by TrialSite News:⁷

“Recently, there has been speculation regarding potential safety signals associated with COVID-19 mRNA vaccines. Many different unusual, prolonged, or delayed reactions have been reported, and often these are more pronounced after the second shot.

Women have reported changes in menstruation after taking mRNA vaccines. Problems with blood clotting (coagulation) – which are also common during COVID-19 disease – are also reported. In the case of the Pfizer COVID mRNA vaccine, these newly revealed documents raise additional questions about both the genotoxicity and reproductive toxicity risks of this product.

Standard studies designed to assess these risks were not performed in compliance with accepted empirical research standards. Furthermore, in key studies designed to test whether the vaccine remains near the injection site or travels throughout the body, Pfizer did not even use the commercial vaccine (BNT162b2) but instead relied on a 'surrogate' mRNA producing the luciferase protein.

These new disclosures seem to indicate that the U.S. and other governments are conducting a massive vaccination program with an incompletely characterized experimental vaccine.

It is certainly understandable why the vaccine was rushed into use as an experimental product under emergency use authority, but these new findings suggest that routine quality testing issues were overlooked in the rush to authorize use.

People are now receiving injections with an mRNA gene therapy-based vaccine, which produces the SARS-CoV-2 spike protein in their cells, and the vaccine may be also delivering the mRNA and producing spike protein in unintended organs and tissues (which may include ovaries)."

Toxic Spike Protein Enters Blood Circulation

The assumption that vaccine developers have been working with is that the mRNA in the vaccines (or DNA in the case of Johnson & Johnson and AstraZeneca's vaccines) would primarily remain in and around the vaccination site, i.e., your deltoid muscle, with a small amount draining into local lymph nodes.⁸

Pfizer's data, however, show this isn't the case at all. Using mRNA programmed to produce luciferase protein, as well as mRNA tagged with a radioactive label, Pfizer showed that the majority of the mRNA initially remain near the injection site, but within hours become widely distributed within the body.⁹

“ We have known for a long time that the spike protein is a pathogenic protein. It is a toxin. It can cause damage in our body if it gets into circulation. ~ Dr. Byram Bridle”

The mRNA enters your bloodstream and accumulates in a variety of organs, primarily your spleen, bone marrow, liver, adrenal glands and, in women, the ovaries. The spike protein also travel to your heart, brain and lungs, where bleeding and or **blood clots** can occur as a result, and is expelled in breast milk.

This is a problem, because rather than instructing your muscle cells to produce the spike protein (the antigen that triggers antibody production), spike protein is actually being produced inside your blood vessel walls and various organs, where it can do a great deal of damage.

“It’s the first time ever scientists have been privy to seeing where these messenger RNA [mRNA] vaccines go after vaccination,” Bridle told Pierson.¹⁰

“Is it a safe assumption that it stays in the shoulder muscle? The short answer is: absolutely not. It’s very disconcerting ... We have known for a long time that the spike protein is a pathogenic protein.

It is a toxin. It can cause damage in our body if it gets into circulation ... The spike protein on its own is almost entirely responsible for the damage to the cardiovascular system, if it gets into circulation.”

The Spike Protein Is the Problem

Indeed, for many months, we’ve known that the worst symptoms of severe COVID-19, blood clotting problems in particular, are caused by the spike protein of the virus. As

such, it seemed really risky to instruct the body's cells to produce the very thing that causes severe problems.

Bridle cites research showing that laboratory animals injected with purified spike protein from SARS-CoV-2 straight into their bloodstream developed cardiovascular problems and brain damage.

Assuming that the spike protein would not enter into the circulatory system was a "grave mistake," according to Bridle, who calls the Japanese data "clear-cut evidence" that the vaccine, and the spike protein produced by it, enters your bloodstream and accumulates in vital organs. Bridle also cites recent research showing the spike protein remained in the bloodstream of humans for 29 days.

Once in your blood circulation, the spike protein binds to platelet receptors and the cells that line your blood vessels. As explained by Bridle, when that happens, one of several things can occur:

1. It can cause platelets to clump together – Platelets, aka thrombocytes, are specialized cells in your blood that stop bleeding. When there's blood vessel damage, they clump together to form a blood clot. This is why we've been seeing clotting disorders associated with both COVID-19 and the vaccines
2. It can cause abnormal bleeding
3. In your heart, it can cause heart problems
4. In your brain, it can cause neurological damage

Importantly, people who have been vaccinated against COVID-19 absolutely should not donate blood, seeing how the vaccine and the spike protein are both transferred. In fragile patients receiving the blood, the damage could be lethal.

Breastfeeding women also need to know that both the vaccine and the spike protein are being expelled in breast milk, and this could be lethal for their babies. You are not transferring antibodies. You are transferring the vaccine itself, as well as the spike

protein, which could result in bleeding and/or blood clots in your child. All of this also suggests that for individuals who are at low risk for COVID-19, children and teens in particular, the risks of these vaccines far outweigh the benefits.

The Spike Protein and Blood Clotting

In related news, Dr. Malcolm Kendrick posted an article¹¹ on his website June 3, 2021, in which he discusses the links between the SARS-CoV-2 spike protein and vasculitis, a medical term referring to inflammation (“itis”) in your vascular system, which is made up of your heart and blood vessels.

There are many different types of vasculitis, including Kawasaki’s disease, antiphospholipid syndrome, rheumatoid arthritis, scleroderma and Sjogren’s disease. According to Kendrick, all of them have two things in common:¹²

1. Your body for some reason starts to attack the lining of your blood vessels, thereby causing damage and inflammation – The “why” can differ from one case to another, but in all cases, your immune system identifies something foreign in the lining of the blood vessel, causing it to attack. The attack causes damage to the lining, which results in inflammation.

Blood clots are a common result, and can occur either because the platelets clump together in response to the vessel wall damage, or because your anticlotting mechanism has been compromised. Your most powerful anticlotting system is your glycocalyx, the protective layer of glycoproteins that lines your blood vessels.

Among many other things, the glycocalyx contains a wide variety of anticoagulant factors, including tissue factor inhibitor, protein C, nitric oxide and antithrombin. It also modulates the adhesion of platelets to the endothelium. When blood clots completely block a blood vessel, you end up with a stroke or a heart attack.

A reduction in platelet count, known as thrombocytopenia, is a reliable sign that blood clots are forming in your system, as the platelets are being used up in the process. Thrombocytopenia is a commonly-reported side effect of COVID-19 vaccines, as are blood clots, strokes and lethal heart attacks – all of which are pointing toward spike proteins causing vascular damage.

2. They significantly increase your risk of death, in some cases raising mortality by 50 times compared to people who do not have these conditions.

The take-home message Kendrick delivers is that “If you damage the lining of blood vessel walls, blood clots are far more likely to form. Very often, the damage is caused by the immune system going on the attack, damaging blood vessel walls, and removing several of the anti-clotting mechanisms.” The end result can be lethal, and this chain of events is exactly what these COVID-19 vaccines are setting into motion.

SARS-CoV-2 Spike Protein May Damage Mitochondrial Function

Other research suggests the [SARS-CoV-2 spike protein](#) can have a serious impact on your mitochondrial function, which is imperative for good health, innate immunity and disease prevention of all kinds.

When the spike protein interacts with the ACE2 receptor, it can disrupt mitochondrial signaling, thereby inducing the production of reactive oxygen species and oxidative stress. If the damage is serious enough, uncontrolled cell death can occur, which in turn leaks mitochondrial DNA (mtDNA) into your bloodstream.¹³

Aside from being detected in cases involving acute tissue injury, heart attack and sepsis, freely circulating mtDNA has also been shown to contribute to a number of chronic diseases, including systemic inflammatory response syndrome or SIRS, heart disease, liver failure, HIV infection, rheumatoid arthritis and certain cancers.¹⁴ As

explained in “COVID-19: A Mitochondrial Perspective”:¹⁵

“Apart from its role in energy production, mitochondria are crucial for ... innate immunity, reactive oxygen species (ROS) generation, and apoptosis; all of these are important in COVID-19 pathogenesis. Dysfunctional mitochondria predispose to oxidative stress and loss of cellular function and vitality. In addition, mitochondrial damage leads to ... inappropriate and persistent inflammation.

SARS coronavirus 2 (SARS-CoV-2) ... enters cell by attaching to angiotensin converting enzyme 2 (ACE2) receptors on cell surface ... Following infection, there is internalization and downregulation of ACE2 receptors.

At vascular endothelium, ACE2 performs conversion of angiotensin II to angiotensin (1–7). Thus, a low ACE2 activity subsequent to SARS-CoV-2 infection leads to imbalance in renin-angiotensin system with relative excess of angiotensin II.

Angiotensin II through binding to its type 1 receptors exerts pro-inflammatory, vasoconstrictive, and prothrombotic effects, while angiotensin (1–7) has opposing effects ... In addition, angiotensin II increases cytoplasmic and mitochondrial ROS generation leading to oxidative stress.

Increased oxidative stress may lead to endothelial dysfunction and aggravate systemic and local inflammation, thus contributing to acute lung injury, cytokine storm, and thrombosis seen in severe COVID-19 illness ...

A recent algorithm showed that majority of SARS-CoV-2 genomic and structural RNAs are targeted for mitochondrial matrix. Thus it appears that SARS-CoV-2 hijacks mitochondrial machinery for its own benefit, including DMV biogenesis. Manipulation of mitochondria by virus may lead to mitochondrial dysfunction and increased oxidative stress ultimately leading

to loss of mitochondrial integrity and cell death ...

Mitochondrial fission enables removal of the damaged portion of a mitochondrion to be cleared by mitophagy (a special form of autophagy). Metabolomic studies suggest that SARS-CoV-2 inhibits mitophagy. Thus, there is accumulation of damaged and dysfunctional mitochondria. This not only leads to impaired MAVS [mitochondrial antiviral signaling] response but also aggravates inflammation and cell death."

The author, Pankaj Prasun, points out that the virus' impact on mitochondria helps explain why COVID-19 is so much deadlier for older people, the obese, and those with diabetes, high blood pressure and heart disease.

All of these risk factors have something in common: They're all associated with mitochondrial dysfunction. If your mitochondria are already dysfunctional, the SARS-CoV-2 virus can more easily knock out more mitochondria, resulting in severe illness and death.

The Spike Protein Is a Bioweapon

In my interview with Seneff and Mikovits (see earlier hyperlink), they both stressed that the key danger – both in COVID-19 and with the vaccines – is the spike protein itself. However, while the spike protein found in the virus is bad, the spike protein your body produces in response to the vaccine is far worse. Why?

Because the synthetic mRNA in the vaccine has been programmed to instruct your cells to produce an unnatural, genetically engineered spike protein. Specific alterations make it far more toxic than that found on the virus itself. Mikovits goes so far as to call the spike protein a bioweapon, as it is a disease-causing agent that demolishes innate immunity and exhausts your natural killer (NK) cells' ability to determine which cells are infected and which aren't.

In short, when you get the COVID-19 vaccine, you are being injected with an agent that instructs your body to produce the bioweapon in its own cells. This is about as diabolical as it gets.

In her paper, "[Worse Than The Disease: Reviewing Some Possible Unintended Consequences of mRNA Vaccines Against COVID-19](#)," published in the International Journal of Vaccine Theory, Practice and Research in collaboration with Dr. Greg Nigh,¹⁶ Seneff explains why the unnatural spike protein is so problematic.

In summary, normally, the spike protein on a virus will collapse on itself and fall into the cell once it attaches to the ACE2 receptor. The vaccine-induced spike protein does not do this. Instead it stays open and remains attached to the ACE2 receptor, thereby disabling it and causing a host of problems that lead to heart, lung and immune impairment.

What's more, because the RNA code has been enriched with extra guanines (Gs) and cytosines (Cs), and configured as if it's a human messenger RNA molecule ready to make protein by adding a polyA tail, the spike protein's RNA sequence in the vaccine looks as if it is part bacteria,¹⁷ part human¹⁸ and part viral at the same time.

There's also evidence suggesting the SARS-CoV-2 spike protein may be a prion, which is yet another piece of really bad news, particularly as it pertains to vaccine-induced spike protein. Prions are membrane proteins and when they misfold, they form crystals in the cytoplasm resulting in prion disease.

Since the mRNA in the vaccines has been modified to spew out very high amounts of spike protein (far greater than that of the actual virus), the risk of excessive buildup in the cytoplasm is high. And, since the spike protein doesn't enter into the membrane of the cell, there's a high risk that it can become problematic if indeed it works like a prion.

Remember, the research cited by Bridle at the beginning of this article found the spike

protein accumulates in the spleen, among other places. Parkinson's disease is a prion disease that has been traced back to prions originating in the spleen, that then travel up to the brain via the vagus nerve. In the same way, it's quite possible COVID-19 vaccines may promote Parkinson's and other human prion diseases such as Alzheimer's.

What Are the Solutions?

While all of this is highly problematic, there is help. As noted by Mikovits, remedies to the maladies that might develop post-vaccination include:

Hydroxychloroquine and ivermectin treatments. Ivermectin appears particularly promising as it actually binds to the spike protein. Please listen to the interview that Bret Weinstein did with Dr. Pierre Kory,¹⁹ one of Dr. Paul Marik's collaborators

Low-dose antiretroviral therapy to reeducate your immune system

Low-dose interferons such as Paximune, developed by interferon researcher Dr. Joe Cummins, to stimulate your immune system

Peptide T (an HIV entry inhibitor derived from the HIV envelope protein gp120; it blocks binding and infection of viruses that use the CCR5 receptor to infect cells)

Cannabis, to strengthen Type I interferon pathways

Dimethylglycine or betaine (trimethylglycine) to enhance methylation, thereby suppressing latent viruses

Silymarin or milk thistle to help cleanse your liver

From my perspective, I believe the best thing you can do is to build your innate

immune system. To do that, you need to become metabolically flexible and optimize your diet. You'll also want to make sure your vitamin D level is optimized to between 60 ng/mL and 80 ng/mL (100 nmol/L to 150 nmol/L), ideally through sensible sun exposure. Sunlight also has other benefits besides making vitamin D.

Use time-restricted eating and eat all your meals for the day within a six- to eight-hour window. Avoid all vegetable oils and processed foods. Focus on certified-organic foods to minimize your [glyphosate exposure](#), and include plenty of sulfur-rich foods to keep your mitochondria and lysosomes healthy. Both are important for the clearing of cellular debris, including these spike proteins. You can also boost your sulfate by taking Epsom salt baths.

To combat the toxicity of the spike protein, you'll want to optimize autophagy, which may help digest and remove the spike proteins. Time-restricted eating will upregulate autophagy, while sauna therapy, which upregulates heat shock proteins, will help refold misfolded proteins and also tag damaged proteins and target them for removal. It is important that your sauna is hot enough (around 170 degrees Fahrenheit) and does not have high magnetic or electric fields.

For the US population 12 years and older, 90% have been infected/injected with the C19 mRNA injection once, 77% twice, 30% (estimated) with the previous boost, and 18 % with the new bivalent reinforcement. "Recoveries" from infection with the SARS-COV2 virus, after 2 to 3 weeks, exceed 97%, more than the excess of the "Relative Risk Reduction" claimed in clinical trials and well above " Absolute risk reduction of less than 1%). Please note that no research body, media outlet or regulator has ever highlighted "recovery rate" in any report. Why not? What is the point of a treatment (C19 mRNA injection) that is not effective for 14 days, when 97% of those infected recover within 14-21 days?

Ridiculously crazy. Treat those at risk with prophylactics (IVM protocols) and those who become infected with what works (IVM, HCQ, and other treatment protocols). SARS-COV2 infection is respiratory. Injection of C19 mRNA is circulatory. In other words, toxic spike proteins impact the airways, while spike proteins (plus toxic delivery mechanisms) are manufactured by the body's (immune?) systems to travel through the bloodstream at all the vital organs. The likelihood of toxic protein spikes in the blood and organs (apart from the lungs) of people previously infected with SARS-COV2 is low. The probability of toxic spike proteins in all the organs of those injected is certain. peterhalligan.substack.com/p/catch-23-the-use-of-spike-infested?utm_so.. (01/23/2023)

Hi, Gui. 6 month old babies are being "boosted"! Will they continue to "boost" until there are no babies left?! www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html

Posted On 03/25/2023

rrealrose

Randy, until parents wake up. Its also in those new, bivalent back-to-school flu shots kids are mandated to take each year.

Posted On 03/25/2023

bfr27915

Gui - For me - a simple "risk assessment." For a "mucosal respiratory virus" - take an experimental jab without long term safety studies, that provides less that a 1% absolute risk reduction VS. The taken daily FLCCC Alliance prevention protocol while avoiding poorly ventilated & congested venues, for all but a limited time duration. And stay away from sick people. Do your own thinking - take some ownership and responsibility. "It is the classic fallacy of our time that a moron run through a university and decorated with a Ph.D. will thereby cease to be a moron." ~ H. L. Mencken

Thank you Randy, and we are seeing an increase in autism. One in 36 (2.8%) 8-year-olds (4% of boys and 1% of girls) have an autism spectrum disorder (ASD), according to a 2020 data analysis released today by the Centers for the CDC. "The authors of these studies urged public health officials to place greater emphasis on research into toxicants that might be driving the rise in autism prevalence." childrenshealthdefense.org/.../autism-rate-increase-cdc (03/23/2023).---- In a recent article, Dr. Mercola reported that Stephanie Seneff believes that glyphosate also contributes to and worsens the damage caused by vaccines, in part because it binds very efficiently to the aluminum used as an adjuvant in certain vaccines.

It is likely to bind strongly to many other toxic metals as well. The theory is that by being wrapped in glyphosate molecules, metals can more easily penetrate various barriers in your body. This is because glyphosate causes these barriers, such as the intestinal barrier and the blood-brain barrier, to break down. they become more porous. And, as leaky gut or leaky brain sets in, toxic metals are carried along, along with glyphosate.

Glyphosate has also been shown to accumulate in the brain and animal studies show that it causes neuroexcitotoxicity due to excess glutamate in the brain. This, in turn, "is absolutely connected to autism," says Seneff. In her book, Seneff also discusses the importance of sulfur for optimal health, how sulfate deficiency is linked to autism, and how glyphosate can cause sulfate deficiency. www.bitchute.com/.../tWUQ7qBrF7EZ .-----

Thank you BFR, and also stay away from the "vaccinated are also sick. A new study conducted by scientists at the University of Colorado confirms the vast majority of humanity has had absolutely no choice in the matter of whether they wish to get the Covid-19 injection or not because the vaccinated have been transmitting antibodies generated by the injections through aerosols. The findings should however come as no surprise because a confidential Pfizer document had already confirmed exposure to the mRNA injections was perfectly possible by skin-to-skin contact and breathing the same air as someone who had been given the Covid-19 jab.

They also, unfortunately, add weight to the claims made by Dr Phillippe van Welbergen, who demonstrated that graphene, an alleged undisclosed ingredient of the Covid-19 injections, is being transmitted from the vaccinated to the not-vaccinated and destroying red blood cells and causing dangerous blood clots.

Rreal; don't hold your breath for parents to wake up. The ones masking their toddlers...that's a whole 'nother story! --- Gui; Yes - glyphosate is definitely increasing the toxicity. Most children today live on a diet of "foods" containing extremely high levels of glyphosate and cereals are the worst! Watch any movie, sitcom, etc., and what are they all eating for breakfast? Cereal; and more often than not - a "brand name" cereal...more marketing disguised as entertainment. The marketing of these toxic offerings are the best that money can buy. Since glyphosate is also found in vaccines, one can only imagine the toxic load on their fragile systems.

The way things are going; I'm inclined to believe that millions of these children will never make it to adulthood; and that's only if this civilization is still standing. We are dealing with Mass Murder here - nothing less. --- I was standing in the checkout line of a major grocery store yesterday and there was a woman holding her baby (possibly a year old). One look at his face and I could see that he had Down's Syndrome. I have seen scores of people - young and old, with this "disease", in my area alone. People have no idea...How long before every other child is autistic?

Posted On 03/25/2023

Randyfast

"Some people"? As much as I appreciate these doctors speaking out; they are still downplaying the seriousness of this assault on humanity. Dr. David Martin is one of the few who is not afraid to tell it exactly like it is. The SYNTHETIC spike protein in the nanobot shot was created in a lab. I hear very few even mention the fact that it is SYNTHETIC. That little FACT is extremely important! Is humanity so dense that they can't see the implications of these oligarchs pushing to have everyone on the planet (except themselves) injected with this Bioweapon? Name me one other time in history that even came close to this Global Insanity! Question: How long before they start coming after the ones who choose to think for themselves - with force? Allow me to try to answer that...When the WHO takes over global healthcare, with the help of WEF and UN. The Doomsday Clock is ticking!

A note to Canadians on Cannabis...When the government announced that they were "legalizing" marijuana; I knew right away that they would take it over. Every cannabis store is now selling products from "Health Canada". They raided and shut down all the real suppliers. Their product is totally adulterated, watered down; and probably sprayed with all kinds of pesticides - also, much more expensive! If you have a trusted source - buy from them. As always; the government "legalized" marijuana for 2 reasons: so they could control it and profit from it! The more things change; the more they remain the same.

Even if they believed in what they were doing how do they justify in their minds the coercion to have it to put food on the table or pay the mortgage, the cutting off from society, the denigration of those who dared to question because of a medical choice. We have never done that for the flu shot so why was this ok?

Posted On 03/25/2023

MF4Mark

I'd suggest that anyone who took the vaccine look into enzymes. Lumbrokinase has been extensively studied and used in Japan. They use it for clotting disorders so it sounds like it's worth a try. Also, I'm wondering if the enzymes would degrade the spike protein.

Posted On 03/25/2023

rrealrose

Dr. Peter McCullough has been studying and using Nattokinase. You can search for him on Rumble or Bitchute.

When the 'vaccines' first appeared I researched and could only find that the mrna had been trialled on terminal melanoma patients and the az had been used for ebola. The only other thing I could find was that they instructed your cells to make the spike protein rather than injecting a deactivated part of the virus as is done traditionally. My first thought was what could possibly go wrong with that (sarc). I wondered if you actually caught covid would your cells remember their instructions and start producing more spike proteins or what if the instructions didn't turn off. A bit far fetched but never ever did I trust that would be safe. Listen to your common sense and instincts ALWAYS.

In the last week I was driving through northwestern Mississippi and the haze of something was extremely thick. It was not smoke and as it wasn't ag fields not cropdusting or fertilizing spray. It was sticky and heavy but not a fog as the weather was not right for fog and it was only in the MS area, not into TN where I started my drive. The sunshine was totally diminished and it covered the landscape as far as visible from the road and stretched over 20 miles before breaking up.

Make NAC a staple as well as other cell supporting foods and/or supplements in mitigating spike toxin

I'm wondering about shedding. Is it a real thing? I was recently around several vaxxed people. I don't need more health issues.

Posted On 03/25/2023

Lou321

I think, for what I have read, it is contagious.

Posted On 03/25/2023

bowgirl

My understanding from my cell biologist mate is yes shedding happens for a time but is then reduced. Keep your immune system as strong as possible.

Um... This is not news. That bio-distribution study came out at least two years ago. I'd really like to see the evidence that the SARS CoV-2 virus has been isolated, purified, and categorized. I don't know why Mercola won't address this subject. Until that evidence is discovered and published talking about viruses, spike proteins, PCRs, antigen tests and COVID is all just ridiculous folderol. Sadly it really makes one wonder about anything the so-called experts say when they won't even address this simple request.

deb - for all of mankind, moving a mountain is hard, really hard, but, not impossible. Accepting humility, surrendering attachments, admitting to err, the fear of loss, letting go of "being right", and, questioning/changing established paradigms is a sparrow's feather that seemingly weighs more than an entire mountain range, and, in instant overwhelming resignation, impossible to move. To demonstrate this phenomena, without forewarning, ask random people, 1) if only themselves and the train driver (engineer) were on board in the locomotive on a 100,000 ton train that also happens to be loaded with toxic chemicals, barreling down the tracks at 60 MPH, when the engineer has a sudden heart attack, and, the train is now only 3 miles away from an imminent major accident, how they would stop the train, and, therefore, prevent a catastrophic disaster?

Make note of the answers given and time taken to respond. There is only one correct answer that less than 1% will answer correctly within a few seconds, or, at all.

2) Second question to test critical thinking and analysis skills: ask them, if they are in a plane when a major weather hazard alert is heard on a radio that a sudden violent storm has developed and is putting the affected area in imminent danger, what they would do? Again, make note of the answers given and time taken to answer. Any person with good critical thinking and analysis skills, whether or not they are trained in aviation, will be able to provide an appropriate response in short order.

I posted this question below on this exchange. Please address the concern if you can. Question: I received the first 2 ModeRNA injections 2 years ago, Mar 21. Once more info became available, I took no boosters. My question: Over time, are the devastating impacts of these GMO shots minimalized? Do they dissipate over time?

Posted On 03/25/2023

Maritt

No, there is no Off button. You might want to consider some protocol. I-RECOVER: POST-VACCINE TREATMENT PROTOCOL [covid19criticalcare.com/.../i-recover](https://www.covid19criticalcare.com/.../i-recover)

READ the link Marritt posted directly above your post. You need to do something to remove or melt or dis-engage spikes, otherwise their damage may continue, at least that's what many practitioners have reported. Keep head well above sand, never assume anything. Do your own research.
