i dont believe it. the purpose of such stories is to put people to sleep, believing they might have been lucky, while spike protein does its damage ...

the key to remember is that spike protein will not show the result right away (while they do everything to distract us from no virus, graphene, placebo and so on ... there is NO test for SPIKE PROTEIN)

here is the great dr. chetty explain how it works since 2021 ... a real great man!

Can't kill all the sheep right out of the gate, or they won't take the vaxxines. You have to have the potent batches, the moderately potent batches, the lightly potent batches and the placebos. If they gave everyone the potent batches right away, and a bunch of people started tipping over, the rest of the sheep would bleet and refuse the vax. But poke some placebo in people and they pat their arms and say, "I got the vax, and didn't have any problems". The light and moderate batches just kill more slowly. The more shots you get, the greater your odds of a bad outcome. Just like playing Russian Roulette, the more you play the greater your odds of death.

i dont believe it. the purpose of such stories is to put people to sleep, believing they might have been lucky, while spike protein does its damage ...

And yet you believe, with zero proof that the spike protein can make you sick.

The theory is, based on the data that once boodles of adverse reactions started rolling in, Pfizer delivered placebo vaccines in collusion with governments to determine if the vaccines were the cause or to cut down on adverse reactions. The evidence for this is that while governments inspected the vaccine batches that were causing boodles of adverse reactions, they did not waste their time inspecting the placebo vaccines since they knew they were placebos.

Kim Iveresen covered this a couple of days ago.

The point of the article is that if you had no adverse reactions from the vaccine, you probably got a placebo. Their evidence for this is that ALL of the vaccine batches that caused adverse reactions were tested by governments for spoilage and content. NONE of the placebo vaccine batches, which cause ZERO adverse reactions were tested by governments since they knew they were placebos and testing them for spoilage and content was a waste of time.

The question you have to ask yourself is why did the government test some vaccine batches for spoilage and content and not others? If you say they were just randomly sample testing vaccines, then **you have to explain why ALL the vaccine batches that were NOT tested by the government had ZERO adverse reactions** - certainly statistically very unlikely.

I don't know if this theory is true. I am just presenting the evidence. If you want a more thorough explanation, you can watch Kim Iversen.

I don't doubt that the vaccines are toxic. However, it is not the spike proteins that make the vaccine toxic. It is the adjuvants and nano-particles which are proven toxins that make the vaccines toxic whereas the spike protein has not been proven to do anything.

▲ 8 ▼ Reply ↩

willisjr 2 hours ago

As we've suspected all along... its was a Russian Roulette "vaccine". /Lol.

However, those that had no adverse events post-jab, should not be too happy yet because this study did NOT actually look at the CONTENTS of the vials.

Basically, this is a data analysis to find statistically significant correlation of batches with reported adverse events - which they did so.

In other words, they do NOT know if those "safe" batches were really placebos OR they just happen to have much LOWER concentrations of toxic poisons / mRNA / LNP or DIFFERENT adjuvants added.

Point is, there are many documented cases now, whereby the health of the "vaccinated" got progressively worse after each jab. The 1st jab was minor tingling in limbs, then 2nd jab was bad headache & nausea, then 1st booster was "Long-Covid"... and then 2nd booster becomes the final "death shot" as the toxins/spike protein/LNP/aluminum etc. accumulates enough to kill the victim.

Of course, some of those "unlucky" enough to get a highly concentrated vial or one with some "special" ingredient may die within minutes of his/her FIRST jab.

So, it could be a case where there were NO placebos at all, but rather huge VARIATION in concentrations and/or contents of each batch. Those that got the less dangerous batches may still suffer SOME (undetected) health/heart damage or shortening of their natural lifespan but these supposedly "luckier" ones would appear unaffected outwardly.

It could be there are no placebo batches.... just different ingredients and/or concentrations in each batch /vial.

Note that many celebrities were also injured or killed. A member of the the Thai Royal family was also in coma. after her 2nd jab I think. The Queen of England also died during the "plandemic" but her case could be due partly to her advanced age.

Remember that 80% of the Israeli population also took at least 2 doses of these "mRNA vaxxines"... and they also experienced way higher excess deaths. As such, it is unlikely that large batches of "placebos" were sent to Israel.... because this would appear too obvious to the international community.

<https://pubmed.ncbi.nlm.nih.gov/35356971/>

Caveat : I'm assuming Israeli authorities are NOT lying or giving false statistics on their excess death numbers here, or that they are will not resort to killing their own kind in order to achieve some over arching goal.

As for Big Pharma execs, many of them probably know its S**T, so they exempted themselves from the start.

With out a double blind study with a placebo group there is no way to tell if the "vaccine" works or how dangerous it is.

This means that vaccines as we know them are nothing more than snake oil.

And not just snake oil, but dangerous snake oil.

This is of course very convenient for the vile criminal gang that control the pharma corps.

▲ 7 ▼ Reply ↩

Deplorable D 2 hours ago *(Edited)*

Being anti-mRNA inoculation does not make someone a rabid anti-vaxxer. It makes them aware. There was ample evidence these particular drugs were dangerous. Drs Malone, Yeadon, and Bhakdi were very public about this in 2020. The idea of different dosages came from the manufacturers themselves in the court-ordered document release from the FDA. Also from those documents is the admission from Moderna that the "m" does not stand for "messenger", but actually "modified". Moderna acknowledged in 2020 their drug was gene therapy and not a vaccine, as there was no antigen in the drug. It was later that the FDA and WHO changed the definition of "vaccine".

AstraZeneca and J&J are adenoviral vector DNA technology. Pfizer and Moderna are mRNA technology. All of these gene therapies code the body to make the spike protein, the lethal part of the virus. And it's produced for an uncontrolled amount of time, at an uncontrolled quantity. The LNP lipid nanoparticle hydrogel transports it to vital organs via the endothelium.

The blood clots that are forming in these jabbed individuals contain the spike proteins and they are literally folding into the clots making amyloid structures. Amyloidosis may play a role in some neurodegenerative diseases.

Don't think it won't happen yet as the mRNA technology is being used for many drugs now under the false premise they are vaccines. Even Moderna acknowledges this distinction. Moderna's [Q2 2020 filing](#) with the Securities and Exchange Commission acknowledged that mRNA is "considered a gene therapy product by the FDA."

If I were to plan a large scale culling, then I would not do it all at once. I would do it slowly. Documents from the FDA dump in 2022 show the drug companies used 4 different dosages in their manufacture process. Now the revelation their were also a large number of placebo batches is pretty strong evidence of some other motivation.

I believe Cliff High was saying this a couple years ago...and it would make perfect sense because the narrative soon switched to a miracle single injection to taking a regular series of them for life. This would assure you would eventually get a hot dose. In addition the people not killed or maimed in the Russian Roulette experiment could say look at me. I'm fine. The poor saps who stroked out were just bad luck or a coincidence. You could not and would not roll out a genocide program to the normies and give them all the same poison in one Jim Jones kool aid drank. You would want to spread it out over time and of course to normalize it you start by saying it's a single injection cure and then you go to a series and then you go to boosters. 100% logical way to get the most hot doses in arms because you need to get as many roaches in the roach motel.

Some Pfizer Vaccine Batches In The EU Were Placebos, Say Scientists.

- Yep. Obviously the batch that the "elites" and "celebrities" were administered on camera.

Placebos are the stuff of clinical trials - everyone who took the jab was a guinea pig of Phase 3 safety and efficacy trials. Just a lab rat to be sacrificed.

What Is Canada Day?

Originally called “Dominion Day,” Canada Day (French: *Fête du Canada*) is the national day of Canada, commemorating the unification of the three North American British colonies into one confederation: New Brunswick, Nova Scotia, and the Province of Canada (which was made up of parts of modern-day Ontario, Quebec, and Labrador).

Maybe those private texts between Ursula von der Leyen and Albert Bourla could shed some light on the profit margin involved in selling saline water marked as a vaccine.

Perhaps some forensics of her offshore bank accounts would also be helpful.

It doesn't mean they were all harmless. Were only 24 months into this worldwide medical experiment.

Ed Dowd is teasing that his groups new data are showing a 25 sigma rise in Hemaetological disease.

This isn't over, it's really only the beginning if you figure it's a 10 yr study to determine the effects of this product.

Your missing the bigger picture.

There was NO WAY billions of doses could have been made for round one.

Just no way. There were not enough facilities to produce it.

THAT is why boosters were deployed.

You see, in round one, yes, vax went out. And where they could not cover, the placebo went out.

Now, how do you continue to canvas and deploy? You tell the rubes a booster is needed and is critical.

Now, you vax a pocket where last time you administered placebos.

Rinse and repeat and 70% of the jackasses in North America are poisoned.

Doesn't that make more sense? The evil fucks had a well sourced and detailed plan.

TBH, I'm doing OK now that the oppressive festivities are over. Did NOT get vaxxed.

I really don't have too much of a dog in this hunt. I guess the vaxxies are going to lay down and take it, though. Good little sheep that they are.

There is plenty enough evidence to move on to Nuremberg ..

If those jabs were not crimes against humanity, with its overwhelming evidence of harms done, nothing else is ..

▲ 6 ▼ Reply ↩

Nuremberg was nothing more than a Soviet style show trial designed to legitimize US involvement in destroying Germany.

Torture was used to get confessions.

All we know about WW2 is warmonger propaganda.

Well, seeing how this is a rhetorical exercise at this point and time, with little hint of anything substantive actually moving forward, I would say it don't much matter, ...

But what is known, is that massive crimes against humanity has occurred .. (not a new story.)

So from my view, call any global movement or tribunal, or a reckoning anything you like. Until it actually happens, it is meaningless ..

Something eerily similar was noticed in Slovenia less than two years ago -

< According to **Slovenia**[n] media sources, the **head nurse of the University Medical Center in Ljubljana** has come out to claim that you have a **one in three chance of receiving a "death" jab** that will give you cancer, if you take the covid-19 vaccine in that country....she has **resigned out of disgust**...

*"The **vials** she showed had **codes** on the labels, each containing **1, 2, or 3 digits** in the code. She then explained the meaning of those numbers. **Number 1 is placebo, saline. Number 2 is classical RNA. The number 3 is an RNA stick that contains the oncogene associated with the adenovirus, which contributes to the development of cancer. For these vials, number 3 says that people who receive it within 2 years will have soft tissue cancer.**"* She said she has personally **witnessed the vaccination of many elites with the liquid number 1 jab.** >
