# 'These Numbers Look Horrific': Work Absence Rates Are Off the Charts — And It's Only Gotten Worse

"Something's going on with our workforce that we've never seen before. And it's gone so far above trend — it's a health concern."

The Vigilant Fox

[Originally Published on DailyClout](#)

The 2022 absence rate “makes absolutely no sense,” exclaimed former Blackrock portfolio manager [Edward Dowd](#). “Something’s going on with our workforce that we’ve never seen before. And it’s gone so far above trend — it’s a health concern.”

“Absences are defined as instances when persons who usually work 35 or more hours a week worked less than 35 hours during the reference week for one of the following reasons: Own illness, injury, or medical problems; child-care problems; other family or personal obligations; civic or military duty; and maternity or paternity leave. Excluded are situations in which work was missed due to vacation or personal days, holiday, labor disputes, and other reasons. For multiple jobholders, absence data refer only to work missed at their main jobs. The absence rate is the ratio of workers with absences to total full-time wage and salary employment,” explained Mr. Dowd on [his website](#).

He noted, “In relative terms, the deviation from trend in 2022, for the total (men+women) full-time workers was about 70%.”

“And that number [absence rates] went up three standard deviations off of trend (2003 to 2019)” in 2020, Mr. Dowd explained. In geek-speak, the chance of something three standard deviations above the mean is 0.3 percent.

## Standard deviation

% of values expected to lie in the symmetric interval  $(-z\sigma, z\sigma)$

$1\sigma$	68.2689492%
$2\sigma$	95.4499736%
$3\sigma$	99.7300204%
$4\sigma$	99.993666%
$5\sigma$	99.9999426697%

Edward Dowd continues. “Three standard deviations is still a big deal. You could make the case for why that happened in 2020. There were lockdowns. There was confusion. People had to scramble with school and all sorts of things. So that makes sense to us. What doesn’t make sense is that in 2021 it persisted and went to five standard deviations. What makes absolutely no sense is the absence rate took off in 2022. And you can see the slope of the line; the rate of change accelerated to the upside in 2022. And that standard deviation was 11. That’s just off the charts!”

Absence Rates, 25-54 year-olds, % and normalised (Z-Score) deviation from trend

As mentioned earlier, something three standard deviations above the mean is very rare, happens 0.3 percent of the time, but at least it remains in the realm of possibility. When we get to standard deviations of 5 and 11, that is astronomically rare. We’re talking about a percentage with multiple zeros before encountering the first non-zero digit.

Something 5 standard deviations, plus or minus, has a [1 in 1,744,278](#) chance of occurring. Something 7 standard deviations, plus or minus, has a [1 in 390 billion](#) chance of happening. So, an 11 standard deviation literally is “off the charts” and then some.

The following chart shows absence rates among 25 to 54-year-olds.

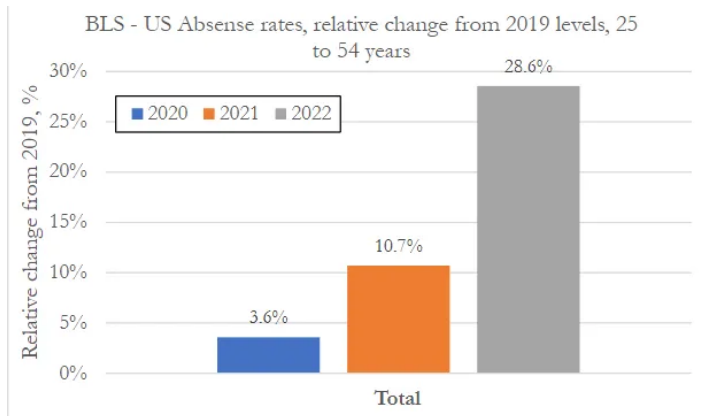

Ed Dowd, in his notes, wrote:

- Absence rates grew in each consecutive year since 2019.
- In 2022, absence rates were 28.6% higher than in 2019, an extraordinary change which represents a large economic loss of productivity.

### Total Absence Rates, 25-54 year-olds, % change from 2019 value

This section analyses the changes in the absence rates from its 2019 value. We compute the changes (in percentage) in absence rates for 2020, 2021 and 2022, relative to 2019. This method of computing changes in absence rates has an advantage of being simpler to understand and interpret than the deviation from the 2002-2019 trend that was discussed in the previous section. As absence rates has an almost monotonically declining trend from 2002 to 2019, taking 2019 as a reference level will likely underestimate the actual increases in absence rates that we observed in the previous section.

Total (Men + Women) Absence Rates in 2020,2021 and 2022, % change from 2019 values.

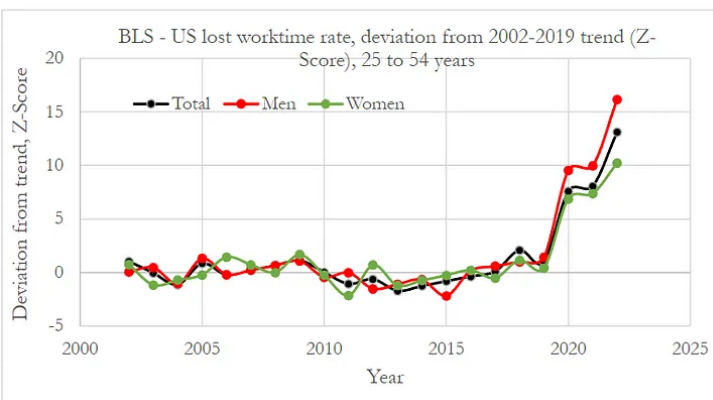

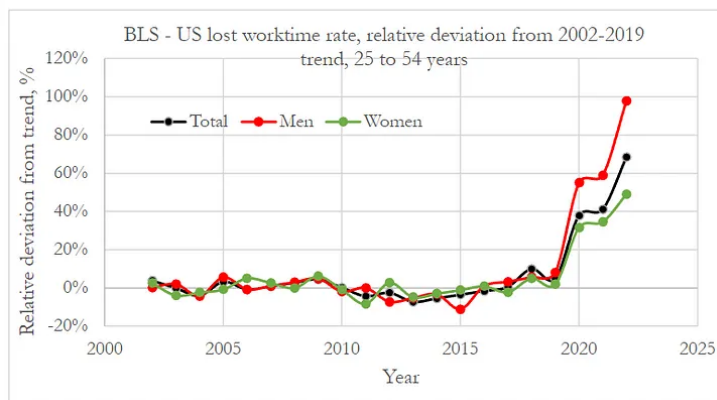

- Absence rates grew in each consecutive year since 2019.
- In 2022 absence rates were 28.6% higher than in 2019, an extraordinary change which represents a large economic loss of productivity.

“And you can see,” he told doctors Drew Pinsky and Kelly Victory, “took a magnitude leap higher in 2022.”

## Edward Dowd moves on to lost worktime rates.

The charts below refer to hours lost per absence. Mr. Dowd breaks down the data:

Lost Worktime Rates, 25-54 year-olds, % and normalised (Z-Score) deviation from trend

“In 2020 and 2021, it [lost hours] was seven and a half standard deviations [above the mean]. Again, in 2020, you can make a case for that. 2021, with the introduction of the vaccines, it should have improved, but it went higher. But in 2022, it went 13 standard deviations off the rails,” he informed. “And again, three standard deviations is pretty rare. 13 is unheard of.”

## So, what’s causing work time lost to be accelerated?

Mr. Dowd and his colleagues surmise, given their work on excess deaths and disabilities, that the cause is indeed **the COVID-19 injections**. “Again, we’re not doctors, but what we’re hearing anecdotally and what we’ve seen in the literature is that this vaccine may

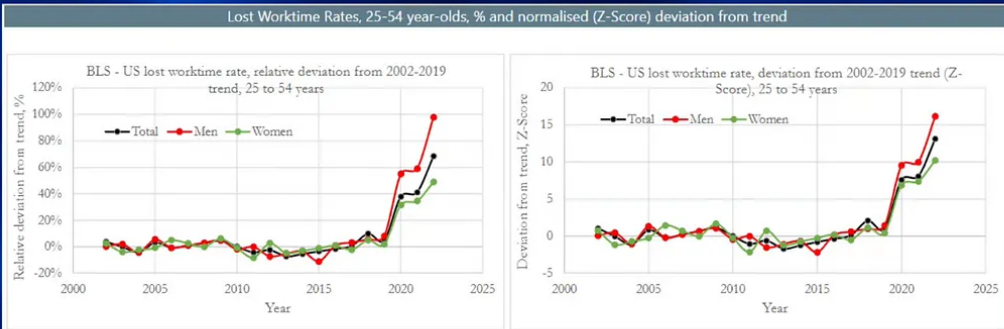

compromise the immune system. And if so, it seems it accelerated in 2022, with our workforce being constantly sick and calling in sick and missing work. So, these are not disabled; these are injured,” he clarified.

**ASK DR. DREW**

**ED DOWD**  
ANALYST & AUTHOR OF "CAUSE UNKNOWN" • PHINANCETECHNOLOGIES.COM

**Lost Worktime Rates, 25-54 year-olds, % and normalised (Z-Score) deviation from trend**

**BLS - US lost worktime rate, relative deviation from 2002-2019 trend, 25 to 54 years**

Year	Total (%)	Men (%)	Women (%)
2000	0	0	0
2005	0	0	0
2010	0	0	0
2015	0	0	0
2020	10	10	10
2021	20	20	20
2022	70	50	100

**BLS - US lost worktime rate, deviation from 2002-2019 trend (Z-Score), 25 to 54 years**

Year	Total (Z-Score)	Men (Z-Score)	Women (Z-Score)
2000	0	0	0
2005	0	0	0
2010	0	0	0
2015	0	0	0
2020	7.5	7.5	7.5
2021	7.5	7.5	7.5
2022	13	13	13

- In relative terms, the deviation from trend in 2022, for the total (men + women) full time workers was about 70%.
- Even though the absolute deviation from trend was the same in Women (0.8%) and Men (0.8%), in relative terms, Women experienced a 100% excess in lost worktime rates when compared to a 50% rise for Men (women's baseline lost worktime rates being roughly double those of men).
- When looking at the normalised deviation from trend in lost worktime rates, we observe that they rose above 13 by 2022. This is a very strong signal.
- When looking at the normalized (Z-Score) deviation from 2002 to 2019 trend in lost worktime rates ranged between -2 to +2 from 2002 to 2019.
- For the Total full time workers:  
In 2020 and 2021 the Z-Score was around 7.5.  
In 2022 the Z-Score was about 13.  
We observe that lost worktime rates have been growing more and more out of line relative the previous 2002-2019 behaviour.
- This means that the deviation from trend in lost worktime rates, in 2022, corresponded to more than 11 standard deviations (assuming a Gaussian distribution for the deviations from trend in lost worktime rates over the 2002-2019 period). This is a very strong signal.

## Work hours lost is not just a health issue; it has profound implications for the economy.

“It affects the productivity of the economy, in addition to the disabled and dead. This is lost productivity. And also, when you’re not feeling well, your cognitive abilities go down. And then the people around you who are well have to pick up your slack. And it causes burnout in those individuals as well. So this is this has knock-on effects we can’t even quantify,” [Mr. Dowd](#) explained.

The high absence rates lead [Edward Dowd](#) to postulate, “Hey, maybe the pandemic is in 2022, not 2020 — statistically. Because this is insane.”

“Something’s going on with our workforce that we’ve never seen before. And it’s gone so far above trend that it’s a health concern. And again, I’ll say this, **I believe it’s the vaccines.** If it’s not, it needs to be talked about and investigated because this is off the rails.”

He continues. “This is something that I would suspect our institutions would be buzzing about and investigating and trying to figure out because these numbers just look terrific to me, as an analyst. And I would have thought there’d be some public health issue official screaming from the rooftops. It’s crickets. It’s crickets, as far as I can tell. And there’s talk of long COVID, but there doesn’t seem to be a lot of funding for long COVID at the moment. If long COVID’s causing this, there should be billions looking into it right now.”

**Dr. Kelly Victory jumps in, saying long COVID should be going down over time.**

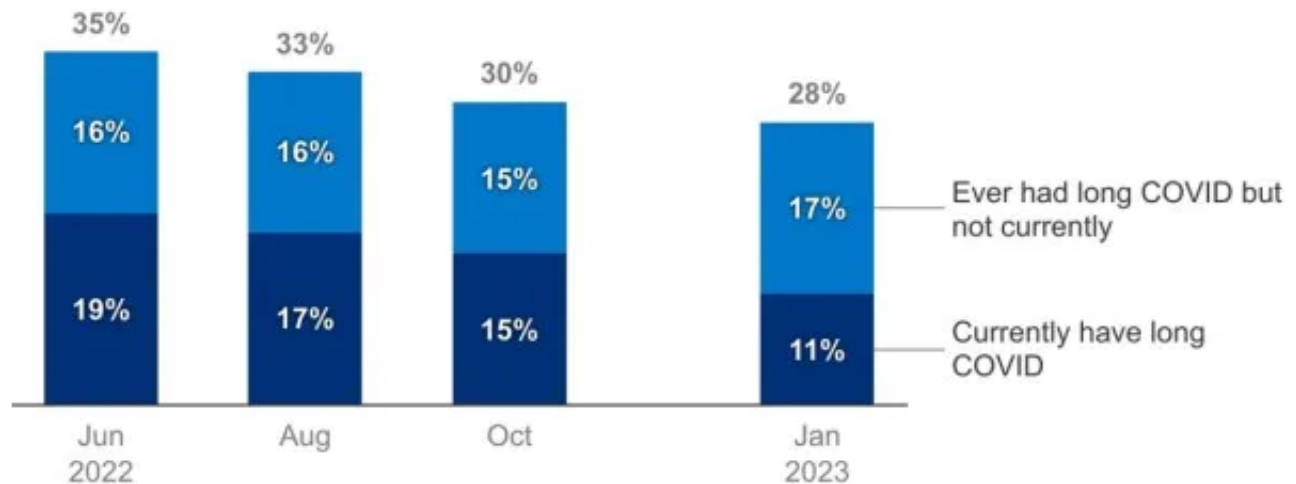

“I think that the numbers [absence rates/hours lost] continuing to go up in 2022 — that’s not what we’re seeing with the trajectory of long COVID. Over time, those symptoms tend to get better. And so you should see a [decrease in those numbers](#), not a continued increase.”

Among People Who Have Had COVID, the Percentage who Currently Have Long COVID is Declining

Percentage of people reporting that they currently have or ever had long COVID among those who have had COVID as of January 16, 2023

NOTE: The Pulse Survey, an experimental survey conducted by the Census Bureau and National Center for Health Statistics, asked respondents whether they had any symptoms of COVID that had lasted longer than 3 months. This figure reports the findings as of 6/13/2022, 8/8/2022, 10/17/2022, and 1/16/2023.

SOURCE: National Center for Health Statistics. Post-COVID Conditions. Data accessed Jan 26, 2023. Available from: <https://data.cdc.gov/d/gsea-w83j>.

Dr. Kelly Victory then issues a critical story about how the CDC *anticipated* 1,000 adverse events a day **prior** to the rollout of the mRNA injections — so they hired an outside firm, General Dynamics. And instead of seeing 1,000 adverse events a day, the CDC saw rates as high as **4.5 times** what was anticipated.

#### Daniel Horowitz reported:

As you can see from page 8 of the pdf, General Dynamics warned the CDC that VAERS had blown through the expected 1,000 cases per day and even reached a level above 4,500 – to the point that GD couldn’t process the data. Mind you, they were never concerned with the human toll, just the logistics of the contract labor. They predicted a need for “reforecasting of staffing needs” to process all these reports.

Atlanta, GA 30333

**A. SAR-CoV-2 Monthly Status Report – December 2020**

**1. Overview**

This document will provide an overview of GDIT’s activities related to the VAERS SAR-CoV-2 response. Two vaccines have been released since the last report. Since release the number of incoming COVID-19 reports has significantly exceeded the estimated maximum of 1,000 reports per day (per the chart below). As a result, GDIT is unable to meet processing and other timeframes (data processing, telephone inquiries, clinical inquiries, etc.). GDIT has reached out to the Program office and OAS for guidance and support.

\* Red line = estimated “worst case” scenario of 1,000 reports per day

“Yet they kept all of this from the public,” lamented Dr. Victory. And she opined that the adverse event data validates what Edward Dowd is finding in his numbers.

**One last chart.**

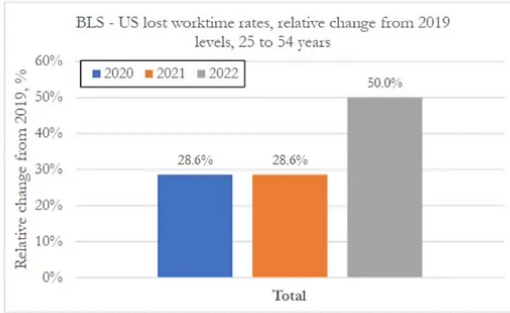

“This is stark,” [Edward Dowd](#) grieved.

This section analyses the changes in the lost worktime rates from its 2019 value. We compute the changes (in percentage) in lost worktime rates for 2020, 2021 and 2022, relative to 2019. This method of computing changes in lost worktime rates has an advantage of being simpler to understand and interpret than the deviation from the 2002-2019 trend that was discussed in the previous section. As lost worktime rates has an almost monotonically declining trend from 2002 to 2019, taking 2019 as a reference level will likely underestimate the actual increases in lost worktime rates that we observed in the previous section.

Total (Men + Women) Lost Worktime Rates in 2020,2021 and 2022. % change from 2019 values.

- Lost worktime rates have grown substantially since 2019.
- In 2022, lost worktime rates were 50% higher than in 2019, an extraordinary change representing a large economic loss of productivity.
- When comparing the rise in lost worktime rates with the rise in absence rates (analysed in [part-2](#)), we can observe that the rise in lost worktime rates was roughly double that of the rise in absence rates.

**ASK  
DR.DREW**

**DR. KELLY VICTORY**  
BOARD-CERTIFIED TRAUMA & EMERGENCY SPECIALIST • [EARLYCOVIDCARE.ORG](http://EARLYCOVIDCARE.ORG)

“Chart four shows that work time lost is 50% higher [in 2022] than in 2019.” The rate was 28.6% in 2020 and 2021, but for some worrisome reason, work hours lost accelerated in 2022. “So again,” Edward Dowd continued, “whatever’s going on is accelerating in 2022 — with a virus that is now nothing more than a cold and supposedly-miracle vaccines, so...”

So, it makes no sense, I believe, Edward Dowd was trying to say — if you were to believe the conventional government narrative. The data is the data, and what it tells us is that health is declining — not improving. That suggests that “saving lives,” as our governments told us, wasn’t a priority after all.

How Many Damaged People?

So much attention has (rightly) gone to excess mortality, sudden deaths and relatively immediate injuries. I'm beginning to think the bigger issue is:

what percentage of vaxxed people have long term damage and problems to a greater or lesser extent?

Not necessarily things as obvious as cancer; things like neuropathy, cognitive decline, susceptibility to injury, balance problems, frequency and severity of various low grade illnesses, etc. What are the correlations with age and number of vaccinations in percentage terms?

What percentage of vaxxed people will have a diminished quality of life because of all the extra smaller health problems due to the vax? %.01? %1? %10? %40? What percentage of vaxxed people have what percentage of damage?

Based on what I'm seeing on substack, including a lot of the stories in the comments, and what i'm hearing from friends who seem to have various sorts of difficulties (of course they are not associating them with the vaccine), a lot.

I'm a sports fan and it is incredible how many athletes are getting injured so easily and frequently. It very much seems like their bodies simply are not as strong or resilient as they were and things that in the past wouldn't even have affected them now lead to weeks or

months on the injury list.

Tell the average person about excess mortality and standard deviations and their eyes glaze over but tell them that one person in 100 has serious long term damage including their friends who seemingly got cancer from nowhere and they will listen.

I know one reason not mentioned here that caused many able bodied people to miss work -

The Families First Coronavirus Response Act

(<https://www.dol.gov/agencies/whd/pandemic/ffcra-employee-paid-leave>)

This act essentially rewarded employees for calling in sick if they were "exposed" to someone with Covid, or if their child, for example, was exposed to someone with Covid and they had to stay home with them. This "sick time" was paid and did not count against the employees accrued PTO or vacation time. CDC recommended 5 days of quarantine. 5 days!! This policy was INSANE. And worse, my daughter-in-law was forced to stay home and use her own PTO because she was unvaccinated. Her employer only granted the federal coverage to vaccinated employees. Unreal. Please look into this and make sure this is factored into the stats for 2022!

No one showing up at work. = One more indication of the 'genius' (evil genius) of covid and what can be and is being done with media control in combination with a state run school system (DoE) via science turned into a government and pharmaceutical industry owned

system (DOL) via science turned into a government and pharmaceutical industry owned commodity. (that is FAR from science and certainly NOT truth!) Not only are the kids (the latest generation of indoctrinated) thinking they can be one of any number of sexes at their beck and call, (and insistent on you believing their lie) they also think they can simply be any number of animals living the life that is indicative of what happens when freedom of conscience is purposefully (psychologically) morphed into the freedom from OWNING a conscience. Several schools now have kids insisting they are cats and other animals. This is the beginning of a chaos (driven in large part by democrats) that will end in a totalitarianism no different from the ones that have gone before that murdered millions.

When they have no conscience the very concept of discipline accountability and consequence is meaningless and these people much like animals with out a cerebral cortex will certainly not see the need to work. And? if you cross them? What happens? Check out today's news! They'll shoot you!! They have no conscience! They are simply animals because they've grown up in a system that never held them accountable. Where love was the absence of boundary and border and sovereignty! Which is also the absence of masculinity and law enforcement! (interesting though that the left is the one pointing to doing away with law enforcement and ridding ourselves of such CRUEL boundaries!)

Vigilant Fox and all,

The People have NOT begun to fight, refusing to UNITE yet in any productive Freedom Movement! So ALL the damage to EVERYONE from ALL the Treason continues until...

The next step has to be UNITY of The People...if ALL Treason is to be addressed with serious accountability, including the COVID19 insanity!

No one, I repeat NO ONE in political power today will ever do the right things until they FEAR the people!

There is nothing for them to fear until we UNITE against them!

UNITED, We can do anything we want!

Divided, there is nothing we can do!

Lex Greene, writer with a serious resume at News With Views has another important piece out tomorrow...for those who desire a United team for Freedom and Liberty, wanting to save

our Republic for future generations and ALL of humanity!

P.S. My gloves came off 15 years ago, working with the NORTH AMERICAN LAW CENTER group. I highly suggest if you want to unite with people actually working real solutions... contact Lex Greene!

Some of these absences have to be explained by people taking a couple of hours off to go to appts during that work day. Working at home the last few years, people got very used to having more flexibility in their day and now feel free to take those couple of hours rather than PTO or feeling the need to be chained to their desk for X hours in a day. As long as the job gets done...

♡ LIKE (4)    💬 REPLY (2)    ...

**P. Reay** Mar 28

I believe they used number of hours worked per week. Employees slipping out for appointments shouldn't affect that criterium. I also suspect that in many cases 'the job' isn't getting done.

Employers don't care...I work in the education field and they are just lowering the cerification qualifications for people to work in the field..... in BC, Canada.....they don't want to look at this any other way...they just want warm bodies in the positions...they say the school act allows them to do this.....

♡ LIKE (3)    💬 REPLY (1)    ...

**Napoleon** Writes The Narrow Path Mar 29

Agree. Employers will never hire a person who didn't take the shots and is not shy about saying that as the reason for leaving the last job. Employers don't want non-compliant workers, just warm compliant bodies in seats. If they can't find such compliancy, they will leave the seats empty.

Yes, and unions have been captured, as well...none of them stood up and helped workers during the madness...they just repeated the mantra...just another arm of the employer and gov't..... this should have been their moment to shine and probably get more unionized people and places..... makes sense if you hear this.....

One thing not mentioned is the fact that many people left the workforce BECAUSE of the clot shot mandates, and loss of body autonomy. They refused also to take a job that enforced the draconian measures of masks, social distancing, vaxx passports etc. This also plays a role in the numbers I am sure, not to the extent of the death shot but still worth noting.

Deaths and illness off the charts. If people can't wake to the fact it's the mRNA so called vaccines causing this they are blind and or brainwashed. To ignore this slaughter is in fact being compliant with the crime

Yes, the numbers speak for themselves about the very-intentional "side effects" of the injections. Somehow, I doubt it's mRNA,

<https://rayhorvaththesource.substack.com/p/why-not-mrna>

but it doesn't matter. What matters is,

Didn't assess any effects of the mandates on absentee rates--unvaxed workers required to stay home, but sympathetic employers--the mandates wasn't their idea--just mark them absent hoping they will be able to come back without affecting the employer's unemployment insurance rates.

FREQUENTLY ASKED QUESTIONS ABOUT THE NEW CLIMATE CHANGE VACCINE, ECOVAX:

What is Ecovax?

Ecovax is a new vaccine developed by Pfizer as part of its Green Health initiative. It uses the latest mRNA technology to control the spread of carbon dioxide (CO2), a planet-killing pathogen transmitted through your respiratory system.
