## WHO Stealth Edits Page Warning Against Vaccinating Children

BY TYLER DURDEN  
TUESDAY, JUN 22, 2021 - 06:20 PM

**Update (1920ET):** Having been caught delivering some fact-base 'science' that does not jibe with the establishment's message that all kids should be jabbed immediately, The WHO has rapidly 'adjusted' its science-based recommendations for

whether children should get vaccinated... or not...

**Gone is the big headline - "Children should not be vaccinated for the moment."**

The new guidance is as follows: *(emphasis ours... in case you are confused by their guidance)*

**Children and adolescents tend to have milder disease compared to adults, so unless they are part of a group at higher risk of severe COVID-19, it is less urgent to vaccinate them** than older people, those with chronic health conditions and health workers.

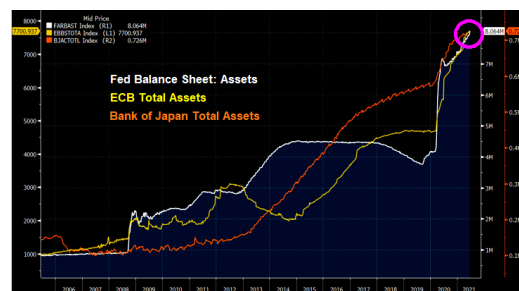

**More evidence is needed** on the use of the different COVID-19 vaccines in children to be able to make general recommendations on vaccinating children against COVID-19.

WHO's Strategic Advisory Group of Experts (SAGE) has concluded that

SUGGESTED READING +

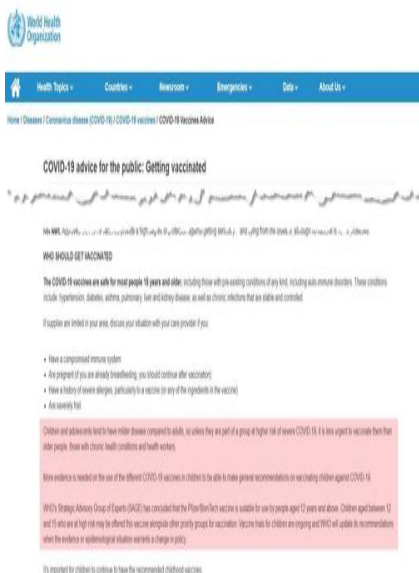

**the  
Pfizer/BionTech  
vaccine is  
suitable for use  
by people aged  
12 years and  
above.** Children  
aged between 12  
and 15 who are at  
high risk may be  
offered this  
vaccine alongside  
other priority  
groups for  
vaccination.

**Vaccine trials for  
children are  
ongoing** and WHO  
will update its  
recommendations  
when the evidence  
or epidemiological  
situation warrants  
a change in policy.

So to clarify... children aren't  
really at risk of this virus so no  
hurry on the jab... more  
evidence is needed on its  
usefulness in kids... oh but the  
Pfizer vax is suitable?

So is there evidence or not? Is  
the vaccine worthwhile for  
kids? If you have to ask, you  
aren't following the science.

Here's the new page ([source](#))

[h/t @AlexBerenson](#)

Color us not entirely surprised at this farce... but one thing we are sure of, this will simply be dismissed as a coincidence and WHO had planned on adjusting its guidance the whole time (it was just waiting to get caught in a disagreement with Fauci and friends).

\* \* \*

As [The Ron Paul Institute for Peace & Prosperity's Adam Dick noted yesterday](#), in **America, national, state, and local governments are pulling out all the stops to advance giving experimental coronavirus shots to children down to the age of 12.**

Up next, babies and children up to age 11.

**The shots are “safe and effective,” the propagandists proclaim.**

Meanwhile, the World Health Organization (WHO) has a different approach. **The WHO says do not vaccinate children, at least not yet.**

**At its website, the WHO [offers this advice](#)** regarding giving experimental coronavirus vaccines, some of which are [not even vaccines under the normal meaning of the term](#), to children:

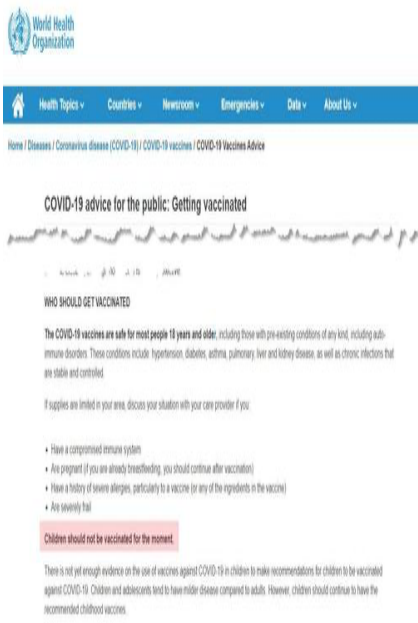

Children should not be vaccinated for the moment.

**There is not yet enough evidence on the use of vaccines against COVID-19 in children to make recommendations for children to be vaccinated**

## against COVID-19.

Children and adolescents tend to have milder disease compared to adults.

However, children should continue to have the recommended childhood vaccines.

Choose accordingly.
